FOREWORD

Since its establishment in 1969, the Organisation of Islamic Cooperation (OIC) promotes cooperation among the Islamic Ummah and puts utmost importance on considering the broader picture, while developing comprehensive approaches to address the challenges of the member states. This noble objective cannot be achieved without high-quality statistics supporting the decision-making processes for better development policies and implementation plans at the national and OIC levels.

In 2015, the leaders of the world, including the OIC member states made a pledge to end poverty in all its forms and agreed upon an agenda for securing the future of the whole planet. Constituting 17 goals and 169 targets, the Sustainable Development Goals (SDGs) also have provided an inspiration for structuring the OIC-2025: Programme of Action. Undoubtedly, the achievement of these development initiatives requires an unprecedented level of quality statistics and the existence of strong institutions that furnish data on the 232 SDG indicators.

At the OIC level, the ***Statistical, Economic and Social Research and Training Centre for Islamic Countries (SESRIC)*** fulfils the important role of following up the SDG indicator framework at the OIC level, reporting the SDG priorities of OIC member states to the annual and follow-up sessions of the Standing Committee for Economic and Commercial Cooperation (COMCEC), and disseminating relevant statistics on the OIC member states.

In this context, I am delighted to note that the "***Statistical Yearbook on OIC Countries***" prepared by the SESRIC, continues to be a primary reference point at the OIC level, thereby representing a credible basis for policy dialogue among the OIC member states. Based on the data contained in the new OIC Statistics Database (OICStat) of SESRIC, the Statistical Yearbook has been enriched to include OIC aggregate values with those of the World, which will enable readers to quickly understand where the OIC countries stand.

Moreover, the twenty categories covered during the period starting from 2000, are in line with the themes of the various meetings at the OIC fora. In this connection, readers with different backgrounds will be able to find the accomplishments of the OIC member states in realizing the targets set in the OIC Ten Year Programme of Action 2015, while aligning the implementation of the OIC-2025: Programme of Action with those of the SDGs.

In this respect, I commend the efforts of the SESRIC for its dedication and hard work, which have greatly contributed to the publication of the present edition of the Statistical Yearbook. I am confident that this Yearbook will contribute to increasing cooperation among the OIC member states in the domain of socio-economic development.

H.E. Dr. Yousef bin Ahmad AL-OTHAIMEEN
Secretary General
Organisation of Islamic Cooperation

PREFACE

A wide range of up-to-date statistical information base is essential for all kinds of executive processes in contemporary societies. Our Centre has been undertaking enormous efforts in the compilation, processing, and dissemination of accurate and reliable statistics on major social and economic indicators on the OIC countries. In particular, the ***Statistical Yearbook on OIC Member Countries***, in line with some other publications of the SESRIC, serves for these purposes, which are the mandate of the Centre.

Being one of the flagship publications, the Statistical Yearbook has been issued since 1980, which also has attracted interest and attention from a broad spectrum of stakeholders. The current edition covers the periods 2000, 2005 and from 2010 to 2018 for 277 indicators under 20 categories ranging from agriculture to water.

Since the early issues, the *Statistical Yearbooks on OIC Member Countries* have been published based on the information disseminated through the OIC Statistics Database (OICStat), thus each following issue of the Statistical Yearbook in the sequence has been enriched with new indicators that have been included to OICStat Database. Today, OIC countries taking actions toward achieving the OIC-2025 Program of Action and the 2030 Global Sustainable Development Agenda should also invest in monitoring the progress and performance; therefore, I believe that enrichment of both the OICStat and the Statistical Yearbook by increasing the number and quality of the relevant indicators will contribute to these efforts. In this setting, I highly recommend our readers benefit from the OICStat in their researches as it offers the most comprehensive coverage on OIC countries.

In addition to the *Statistical Yearbook on OIC Member Countries*, the Centre constantly aims at creating innovative tools and cutting-edge visual techniques to present OICStat database in various forms. For example, SESRIC Motion Charts (SMC), OIC Top/Bottom Finder (OIC-TBF), OIC Ranker and OIC-Countries in Figures (OIC-CIF) are these tools that can be easily accessed on the website of the Centre.

To increase our outreach to wider audiences, SESRIC commenced the "Did You Know?" series to briefly highlight the achievements of the OIC countries across many sectors including intra-OIC trade, intra-OIC tourism and intra-OIC Passport Power Index. Noteworthy to mention that the content and quality of the statistical products of the SESRIC have been continuously improved in light of the comments we continue to receive from our stakeholders.

I would like to express my thanks and sincere appreciation to all concerned for their cooperation and support and look forward to receiving their constructive feedback that would help us improve the current and other publications.

H.E. Amb. Musa KULAKLIKAYA
Director General
Statistical, Economic and Social Research and Training Centre for Islamic Countries

INTRODUCTION

The Statistical Yearbook (SYB) on OIC Member Countries 2018 delivers a wide range of internationally accessible statistics on broadly defined social and economic categories. The categories and indicators covered in the SYB 2018 are hosted on the OIC Statistics (OICStat) Database. The brief descriptive analysis sections given before the tables in the SYB 2018 depict the socio-economic state of the OIC countries and the aggregate performance of the OIC compared to the World. The SYB 2018 serves as a timestamp for the progress of the OIC countries with respect to the development initiatives at the OIC and international level. Overall, it is noteworthy that OIC development programs co-exist in complete harmony with the other development agenda at the global level.

In 2015, the World has embarked on achieving the Sustainable Development Goals (SDGs) – comprised of 17 Goals and 169 targets – set for the period of 2015-2030. In coherence with the SDGs to a greater extent, OIC countries approved the OIC 2025 Program of Action (OIC PoA 2025) in 2016. Encompassing sustainability with more comprehensive and in-depth goals, these two development agenda are the continuation of their two predecessors; namely, Millennium Development Goals (MDGs) and OIC Ten Year Program of Action 2015. It is therefore appropriate to state that while MDGs were posing challenges in measuring and reporting the progress for the developing countries, these shortcomings during the SDGs period are applicable for not only the developing but also the developed countries. Despite these challenges, global and regional development communities are working to increase statistical capacities of the countries and report the progress to the maximum extent possible.

Against this background, the coverage period of the SYB 2018 allows observing the achievements of OIC countries over the MDG period and since the initiation of SDGs until most recent year based on statistical information available. In the following paragraphs, major categories found in the SYB 2018 are reviewed in light of the OIC PoA 2025 and the findings of the Results of the Tendency Survey on SDG Priorities of OIC Member Countries (2018a) which highlights the prioritised the eight SDGs.

Agriculture sector is considered as the primary contributor to the economic value added of the OIC countries. However, it is worth noting that in many member countries, owing to the combination of policy measures as well as the environmental and geographical factors, the importance of the agricultural activities has diminished with increasing dominance of services and industry sectors (SESRIC, 2016a). In line with agriculture and food security issues, access to water resources, clean water and sanitation facilities, water usage in agriculture and production are among the key elements of the OIC strategic vision. Implementation Plan for the OIC Water Vision was developed at the First Meeting of the OIC Water Council held in Istanbul, Turkey in November 2017 (SESRIC, 2018b). As stated in the in the OIC PoA 2025, "*the agriculture sector has critical importance for many member countries, especially for the least developed ones, as agricultural development is among the various prerequisites for economic development and provides a livelihood for a major part of the OIC population*". Undeniably, agriculture is a critical sector both in terms of its share in the economy and labour force employment, particularly in OIC countries in the Sub-Saharan Africa and in other low-income member countries (Figure 14.1) According to (SESRIC, 2018a), SDG 2 "End hunger, achieve food security and improved nutrition and promote sustainable agriculture" is a prioritised SDG at the OIC level. In line with this prioritised SDG, six sub-goals on agriculture and water-related areas are found under Goal 2.8 "Agriculture and Food Security" in the OIC PoA 2025. It is worth mentioning that the Implementation Plan of the OIC-2025: Programme of Action has been developed to have a clear plan for achieving all goals with responsible institutions at the OIC level.

In terms of **demography**, OIC countries with around 1.8 billion population constitute around 24% of the global population. Demographic structure of the OIC is very young, and population is growing with higher rates compared to the rest of the World owing to the fact of relatively higher fertility rates in OIC countries. Meanwhile, even

the life expectancy is increasing in the OIC countries, it is still relatively below the World average (Table 2.6). Consequently, OIC countries have lower old-age dependency ratios but higher young-age dependency ratios compared to the World as a group. With increasing working age population, total labour force of the OIC countries and its share in the World has been raising (Table 12.13). In this retrospect, Goals 2.9.14-15-16 related to labour, employment and social protection in the OIC PoA 2025 are important policy areas due to the fact that economic burden of the working age population increases with higher age dependency ratios. Issues related to youth and elderly as critical segments depending on support have been included both under the SDGs and OIC PoA 2025 Goal 2.13.

The **education** sector is one of the key engines of social and economic well-being and is covered under Goal 2.11 in the OIC PoA 2025. Education financing in OIC member countries, in general, has been below the World average, as a result, education outcomes such as literacy rate and enrolment rates in education in primary, secondary and tertiary levels also were under the global average (Table 3.1 and 3.2).

Investment into **science, technology, and innovation (STI)** has been unsubstantial in the most of the OIC countries, as a result, achievements in the field of STI were below their potential levels. Important STI output components such as *number of academic articles published in the indexed journals*, *patent application and grants*, and *high technology exports* of the OIC countries originated from very few OIC countries; such as, Malaysia, Iran, Turkey, Indonesia and Saudi Arabia (Table 16.1, 16.5, 16.6, and 16.7). Presence and connections of STI across many strategic goals of the OIC are vividly visible under Goal 2.10.1 in the OIC PoA 2025 and the Astana Declaration of the First Summit of the OIC on Science and Technology.

Energy and **environment** are equally important topics in the OIC agenda. Besides SDG 13 "**Climate Action**" being one of the prioritised SDGs in accordance with the (SESRIC, 2018a) findings, the OIC PoA 2025 covers four goals under Environment, Climate Change and Sustainability section (2.5.1 to 2.5.4) and three goals under the Energy section (2.9.6 to 2.9.8). OIC countries, resource rich in terms of natural gas, crude oil, coal, precious metals, and other natural resource reserves, should develop rational national strategies in their production of resources as well as develop and implement long-term strategies on alternative energy sources (SESRIC, 2018c). The volume of natural gas and crude oil extraction, for example, have substantially increased in the OIC countries group while there were not many sensible results in the consumption and production of electricity from renewable energy resources over the last decade (Table 4.12, 4.13, and 4.15). Correspondingly, total and per capita carbon dioxide (CO_2) emissions and OIC share in the global CO_2 emissions have risen over the MDG period as well as since commencing of SDGs period (Table 5.1 and 5.2).

As per the findings of (SESRIC, 2018a), SDG 5 "**Gender Equality**" is another prioritized SDG by the respondent OIC countries. The OIC PoA 2025 covers explicitly this dimension under Goals 2.6.5, 2.9.19, 2.13.1, 2.13.5, 2.13.6, and 2.13.7. An improvement in OIC countries has been observed in achieving gender equality in education and economic participation that can be observed in gender parity index scores across these fields (Table 6.1 onwards to 6.12). Yet, there is still room for development in the case of violence against women. As it was mentioned in (SESRIC, 2016b), "*In OIC member countries, it is relatively more challenging to measure violence and abuse against women correctly and to cope with this social problem due to some social norms and attitude of women. According to the available data in 2012, the average physical violence rate reported in the OIC as a group was 14.4% that was higher than that of the World average (12.9%) and the average of developed countries (4.4%)*".

SDG 3, another prioritised SDG as pointed out in (SESRIC, 2018a), is about ensuring **health**y lives and promote well-being for all at all ages. Three goals (2.12.1, 2.12.2, and 2.12.3) in the OIC PoA 2025 focus on the health dimension. Overall, OIC countries have shown progress in the health indicators included in the SYB 2018, including the prevalence of undernourishment, mortality rates, prevalence of HIV, treatment of tuberculosis among many others (Table 7.11, 7.12, 7.21, 7.22, and 7.24). Achievements were

largely due to the countries commitments in increasing their health spending (Table 7.6).

Goals 2.9.1 to 2.9.5 in the OIC PoA 2025 are devoted to Industry, Innovation & Infrastructure, which mainly corresponds to SDG 9, one of the prioritised SDGs as indicated in (SESRIC, 2018a). A positive trend has been observed in the OIC member countries in industry sector, particularly, fertilizers, chemicals, clothing and textile productions (Table 8.1). Decomposition of the economic structure of the OIC as a group revealed that industry has been the dominant sector with the large share in the total value added (Figure 14.1). Besides, OIC countries recorded progress across all modes of transportation – road, rail, sea, and air (Table 9.2, 9.7, 9.9, and 9.10) – over the period of MDGs as well as since the launching of SDGs. In terms of, internet and cellular mobile connections as well there has been noticeable positive progress (Table 9.4 and 9.5).

Islamic finance development is an important goal specific to the OIC PoA 2025, while also some non-OIC countries established Islamic banking and finance institutions. Not all OIC countries have yet initiated Islamic finance and even less have statistical records and reporting systems on the sector. Overall, Islamic banks and Islamic banking windows of OIC countries have been increasing (Table 11.2 and 11.7). However, Islamic finance comprises only a minor share of global financial system. Active involvement of OIC countries and relevant OIC institutions would be required to achieve goals 2.7.10 – 2.7.13 under the OIC PoA 2025 in this regard.

Tourism has been considered as an important factor of economic development and well-being of the people, as the experiences of some OIC countries show. In the OIC PoA 2025, Goals 2.9.9 to 2.9.13 refer to tourism sector development and include the public private partnership, intra-OIC tourism cooperation, Islamic tourism, and cross-regional tourism aspects. OIC countries have immense potentials to develop their service sectors in general and tourism in particular. There are still issues across the OIC countries to be solved to increase the attractiveness of destinations. However, many OIC countries have accomplished good figures towards developing the sector (Table 18.1).

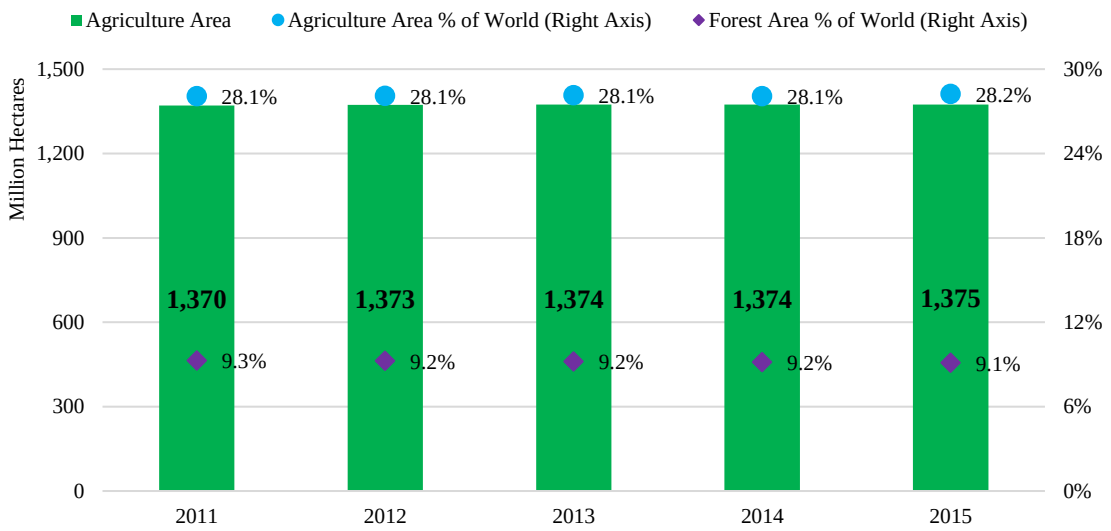

Intra-OIC cooperation and regional integration would bring more sustainability and resistance to economic and financial stress among many other economic benefits. Given its significance in the economic development, OIC PoA 2025 Goals 2.7.1 to 2.7.9 cover intra-OIC trade and investment. OIC countries have been net services trade importers except for few countries such as Turkey, Morocco, Bahrain, Egypt, Jordan and Maldives with developed tourism sectors. Furthermore, merchandise exports of OIC countries largely comprised of primary commodities; thus, the volatility of commodity prices makes OIC economies less stable (Figure 19.1 and 19.2).

1 AGRICULTURE

In 2011, agriculture area of the OIC member countries were 1,370 million hectares, which constituted 28.1% of the World agriculture area. The agriculture area of the OIC increased throughout the years and reached to 1,375 million hectares in 2015. Therefore, share of OIC in the agricultural area of the World also slightly grew up and reached to 28.2% in 2015 (Figure 1.1). This figure reflects that, overall agriculture area have degraded across the globe over the period from 2011 to 2015, although, some OIC member countries also had agricultural soil degradation and erosion, the area losses have been less severe in the OIC member countries compared to rest of the World as a group (Table 1.1).

Figure 1.1: Agriculture Area of OIC Member Countries, 2010-2015

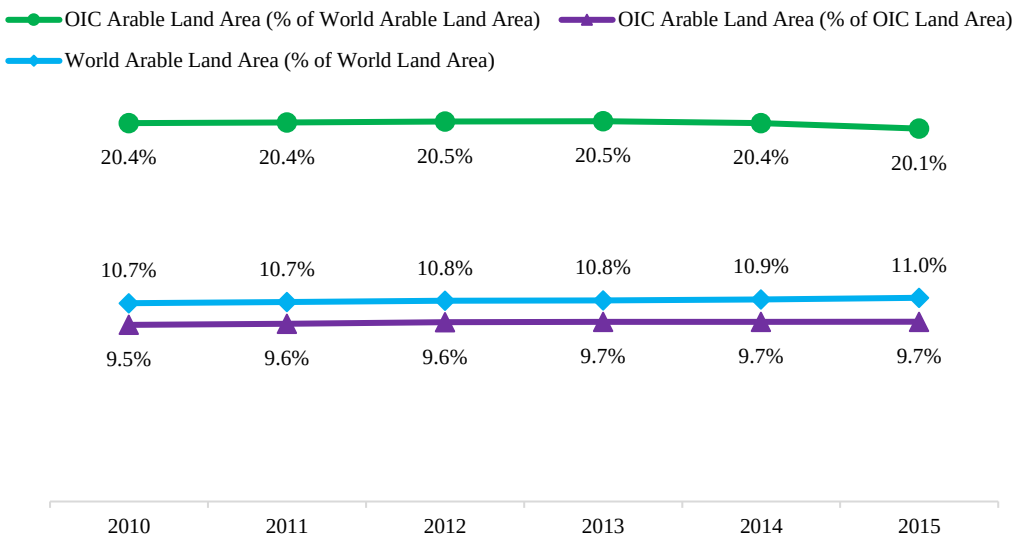

Source: Food and Agriculture Organisation (FAO), FAOStat Database

At the individual country level, Kazakhstan with nearly 217 million hectares and Saudi Arabia with 174 hectares have been the member countries with the largest agriculture areas among the OIC. Followed by Nigeria, Sudan, and Indonesia, these top five countries make up 42.7% of the total OIC agriculture area in 2015 (Table 1.1).

Another sensitive area due to its environmental importance is deforestation. Forest area of OIC member countries diminished from 3,725.6 thousand square km in 2011 to 3,645.5 thousand square km in 2015 (Table 1.6). Despite, the forest area has been decreasing across the World, it was more rapid and notable in OIC member countries. Thus, the share of the OIC in the global forest area dropped from 9.3% to 9.1% between 2011 and 2015 (Figure 1.1). At the individual country level, contraction of the forest area has been observed across the 26 OIC member countries over the period under consideration. The most striking change was in Togo (29.6%), Uganda (20.7%), Nigeria (19.0), Pakistan (10.5%) and Chad (9.4%). These countries were among the top ten countries in the World with the largest degradation of the forest areas.

Most of the OIC member countries have been among the agriculture-intensive economies in the World, between 2010 and 2015. Despite the arable land area of the OIC member countries had increased from 304.7 million hectares to 310.1 million hectares, over the period examined (Table 1.2), proportionally the share of OIC in the arable land area of the World, slightly contracted from 20.4% to 20.1% (Figure 1.2). In 2010, share of the arable land area in the total land area was higher in the World compared to the OIC member countries as a group, 10.7%, and 9.5%. Besides, over the period between 2010 and 2015, arable land has expanded more notably across the rest of the World compared to the OIC; therefore, OIC member countries could not reach the level of the World in 2015. On the contrary, the gap has widened even more with the share of arable land in the total land area of OIC equal to 9.7% compared to that of the World 11.0% in 2015 (Figure 1.2).

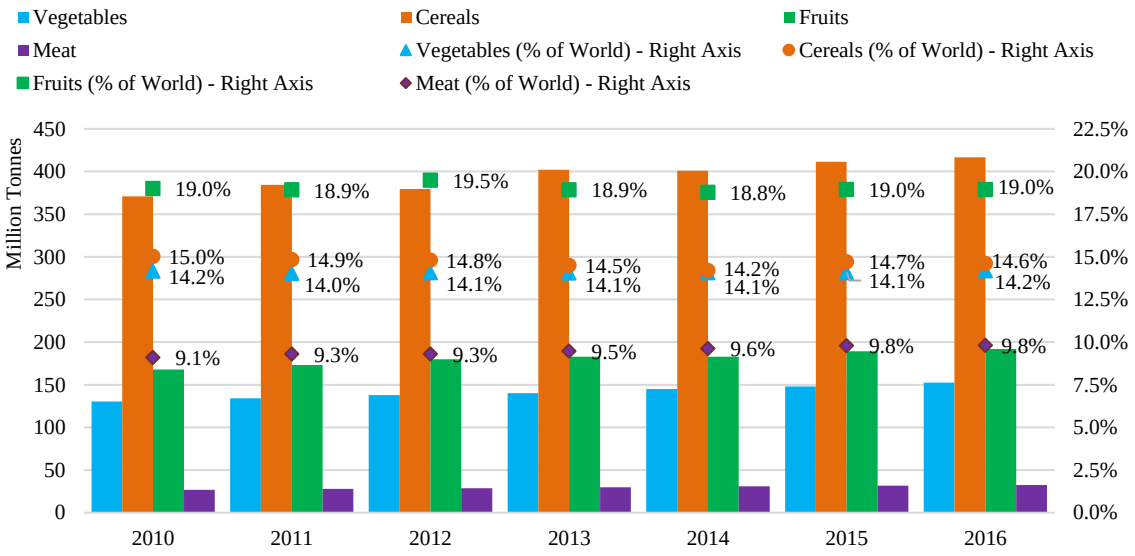

Figure 1.2: Arable Land Area of OIC Member Countries, 2010-2015

Source: Food and Agriculture Organisation (FAO), FAOStat Database

As shown in Figure 1.3, total production of cereals, fruits, meat and vegetables of the OIC member countries displayed a positive trend, between 2010 and 2016. Compared to the year 2010, the largest change, 20.8%, occurred in the meat production, as the total meat production of the OIC member countries reached 32.4 million tonnes in 2016 while it was around 26.8 million tonnes six years before. Only nine OIC member countries produced more than 1 million tonnes of meat. These countries were Pakistan (3.4 million tonnes), Turkey (3.3 million tonnes), Indonesia (3.2 million tonnes), Iran (3.1 million tonnes), Egypt (2.3 million tonnes), Malaysia (1.9 million tonnes), Nigeria (1.4 million tonnes), Morocco (1.2 million tonnes) and Uzbekistan (1.2 million tonnes). In 2016, the aggregate meat production of these nine countries constituted, 65.1%, of the total OIC. In per capita terms, meat production of the OIC increased from 17.1 kg per person to 18.3 kg per person, however, it was significantly below the World average (Figure 1.4). The highest intensity of meat production above the World average of 44.3 kg per person were recorded in five OIC member countries. These were Brunei (65.9 kg per person), Malaysia (62.4 kg per person), Turkmenistan (56 kg per person), Kazakhstan (53.5 kg per person) and Guyana (45.6 kg per person) (Table 1.21).

Figure 1.3: Cereals, Fruits, Meat and Vegetable Production in OIC Member Countries, 2010-2016

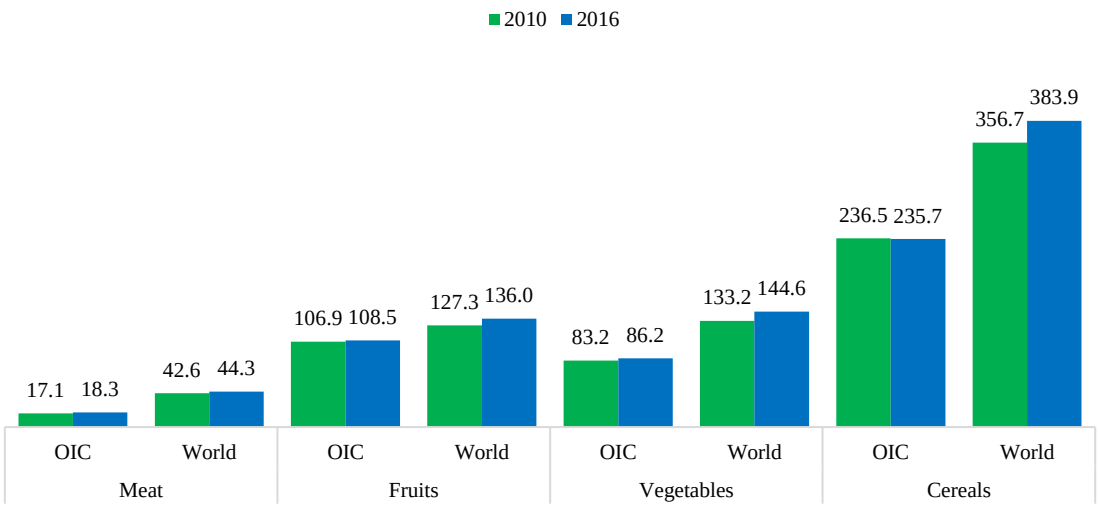

Source: Food and Agriculture Organisation (FAO), FAOStat Database

The second largest increase have been monitored in the total vegetable production of the OIC member countries. In 2016, 152.5 million tonnes of vegetables were produced by OIC member countries, which corresponded to an increase of 16.9%, compared to 2010. Turkey was the top producer with supplying 24.4 million tonnes of vegetables. The country was followed by Egypt with production level of 16.8 million tonnes, Iran 14.3 million tonnes, Nigeria 14.3 million tonnes, Indonesia 10.8 million tonnes and Uzbekistan with 10.5 million tonnes, respectively in 2016. These six countries alone made up around 60% of total OIC production of vegetables in the year 2016. When examining the intensity of the vegetable production, across the 13 OIC member countries vegetable production per person were higher than the World average of 144.6 kg per person, in 2016. Among them top three countries with the most impressive results were Uzbekistan with 330.9 kg vegetable production per person, followed by Turkey with 306.9 kg per person, and Albania with 289.6 kg per person (Table 1.23). Overall, vegetable production per capita of OIC increased from 83.2 kg to 86.2 kg, over the period under review (Figure 1.4).

Total fruit production of the OIC member countries reached 191.9 million tonnes in 2016 with increasing by 14.4% in six years. At the individual country level only 4 OIC member countries; namely Turkey, Iran, Egypt and Indonesia, supplied nearly half of the total fruit production, 47.2%, in 2016, through producing more than 20 million tonnes each. Additionally, 27 OIC member countries had a fruit production of over 1 million tonnes in 2016. Fruit farming kg per person in OIC slightly rose from 106.9 kg to 108.5 kg, while the growth was more substantial globally, from 127.3 kg to 136 kg between 2010 and 2016. 15 OIC member countries achieved the fruit production intensity per person of over the World average of 136 kg.

Compared to 2010, the increase in cereal production was also significant. In 2016, the OIC member countries produced 416.6 million tonnes of cereals, which corresponded to an increase of 12.3% from its 2010 level. The largest 8 OIC cereal producers, namely in descending order, Indonesia, Bangladesh, Pakistan, Turkey, Nigeria, Egypt, Kazakhstan, and Iran accounted for nearly 76.7% of the total cereal production of the OIC in 2016. In addition to these eight forerunners, 27 member countries produced between 1 and 10 million tonnes of cereals while the level of cereal production was less than 1 million tonnes in 22 member countries. The leading OIC country in terms of cereals production per capita was Kazakhstan 1,147.1 thousand kg in 2016. Following Kazakhstan, Guyana with 696.3 kg per person, Suriname 498.18 kg per person, Mali with 491.79 kg per person and Turkey with 443.66 kg per person were also among the most intensive cereals producers in OIC.

Table 1.25: Definitions of Agriculture Indicators

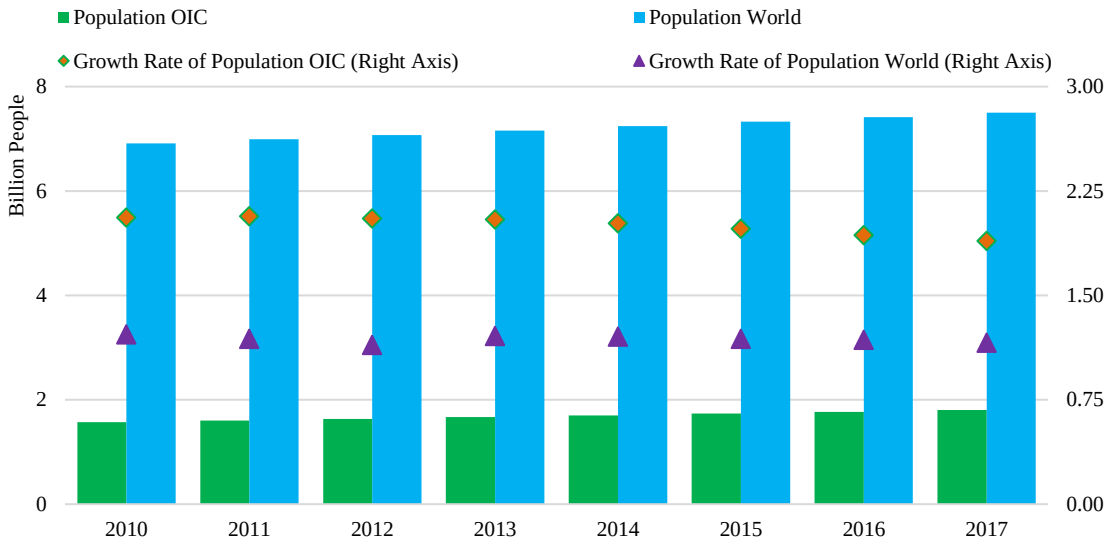

Indicator	Definition
Agricultural Area	Agricultural area, is the sum of areas under a) arable land (b) permanent crops (c) permanent meadows and pastures.
Arable Land	Arable land refers to land under temporary crops (double-cropped areas are counted only once), temporary meadows for mowing or pasture, land under market and kitchen gardens and land temporarily fallow (less than five years). The abandoned land resulting from shifting cultivation is not included. Data for arable land is not meant to indicate the amount of land that is potentially cultivable.
Arable Land, % of Land Area	Share of arable land in total land area.
Fertilizer Use	Fertilizer consumption refers to the total amount of fertilizers used. This is obtained by adding the volumes of nitrogenous, phosphate and potash fertilizers expressed in terms of plant nutrients (N, P_2O_5 and K_2O).
Fish Catches	Includes the fishing in the country as well as in the ocean.
Forest Area	Forest area is land under natural or planted stands of trees of at least 5 meters in situ, whether productive or not, and excludes tree stands in agricultural production systems (for example, in fruit plantations and agroforestry systems) and trees in urban parks and gardens.
Forest Area, % of Land Area	Forest area is land under natural or planted stands of trees of at least 5 meters in situ, whether productive or not, and excludes tree stands in agricultural production systems (for example, in fruit plantations and agroforestry systems) and trees in urban parks and gardens.
Land Area	Land area is a country's total area, excluding area under inland water bodies, national claims to continental shelf, and exclusive economic zones. In most cases the definition of inland water bodies includes major rivers and lakes.
Nitrogen Fertilizers (N Total Nutrients)	Total nitrogen (N) from all fertilizer products.
Permanent Crops	Permanent crops refer to the land cultivated with long-term crops which do not have to be replanted for several years (such as cocoa and coffee); land under trees and shrubs producing flowers, such as roses and jasmine; fruit trees; nut trees; vines and nurseries (except those for forest trees, which should be classified under "forest" and trees grown for wood or timber).
Permanent Meadows and Pastures	Permanent meadows and pastures refer to the land used permanently (five years or more) to grow herbaceous forage crops, either cultivated or growing wild (wild prairie or grazing land).
Phosphate Fertilizers (P_2O_5 Total Nutrients)	Total phosphate (P_2O_5) from all fertilizer products.
Potash Fertilizers (K_2O Total Nutrients)	Total potash (K_2O) from all fertilizer products.
Production of Cereals	Includes only the cereals collected for dry grain.
Production of Cereals per Person	Quantity of cereal produced per inhabitant.
Production of Cotton	The amount of lint produced from harvested seed cotton.
Production of Cotton per Person	Quantity of lint produced from harvested seed cotton per inhabitant.
Production of Fruits	Total quantity of fruits produced.
Production of Fruits per Person	Quantity of fruits produced per inhabitant.
Production of Meat	Meat of animals slaughtered in the national borders, independent of their origin.
Production of Meat per Person	Quantity of meat produced per inhabitant.
Production of Vegetables	Total quantity of vegetables produced.
Production of Vegetables per Person	Quantity of vegetables produced per inhabitant.
Surface Area	Surface area is a country's total area, including areas under inland bodies of water and some coastal waterways.

2 DEMOGRAPHY

The population of the OIC member countries were 1.57 billion constituting 22.7% of the world population for the year 2010. This figure grew up to 1.8 billion people or almost quarter, 24%, of the world population in 2017 (Figure 2.1). However, it is important to note that the demographic states of the OIC member countries differentiate noticeably. For example, Indonesia, Pakistan, Nigeria and Bangladesh are among the world's most crowded countries with populations exceeding 150 million and with Indonesia over 200 million people. On the other hand, six OIC member countries have less than 1 million people, including two, Brunei and Maldives, with fewer than 500,000 people in 2017. Other four countries with population less than 1 million people were Suriname, Guyana, Comoros and Djibouti.

Figure 2.1: Total Population and Growth Rate of Population, 2010-2017

Source: World Bank, World Development Indicators

Globally, the growth rate of population has been declining. In 2017, the growth rate of population for the World was estimated as 1.16%, while it was 1.22% in 2010. In OIC member countries, population has been growing with the higher rates compared to the World on average, although the rate has fallen from 2.06 in 2010 to 1.89 in 2017.

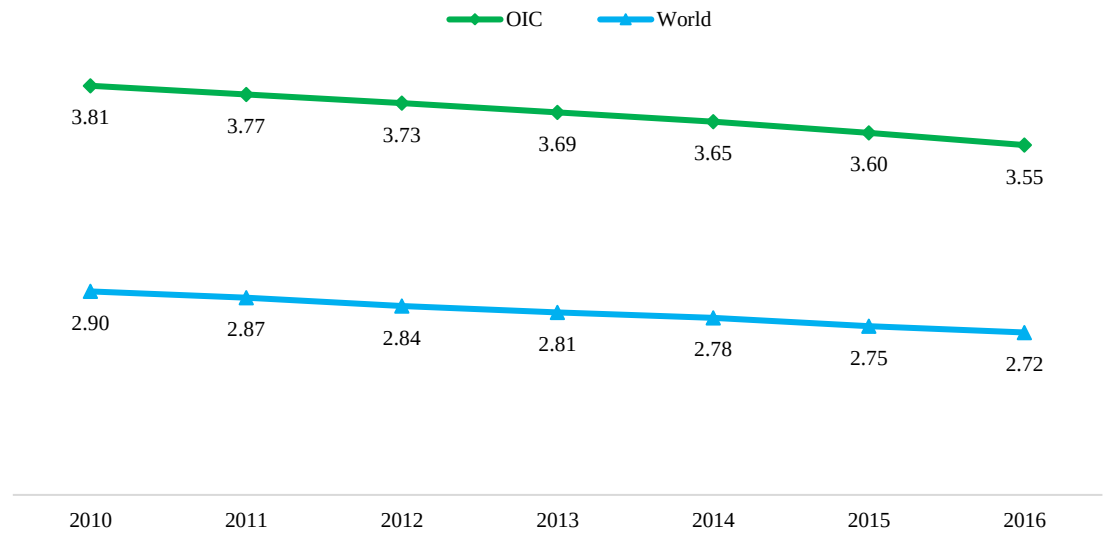

It worth noting that, two OIC member countries, Albania and Syria, experienced negative population growth in 2017. On the other extreme, the annual population growth rate of Oman, Bahrain, Niger, Uganda, Chad, Gambia and Mali were over 3% for the same year (Table 2.2).

Due to the intensive growth of the populations in OIC member countries, total land area of the countries also have become inevitably more crowded with people. In 2017, the average population density of the OIC member countries reached 56.7 persons per square km. Through looking at the top and bottom countries, in terms of the population density one can view the divergence. Specifically, three OIC member countries, namely Bahrain, Maldives, and Bangladesh were populated with over 1000 people per square km while the population density was below 5 persons in Mauritania, Guyana, Libya and Suriname in 2017. (Table 2.9).

In the absence of immigration, fertility rates also provide information about the population growth as related measures. From 2010 to 2016, the average fertility rate of the OIC member countries declined from 3.81 to 3.55. Meanwhile, global average fertility rate also fall very sharply from 2.90 to 2.72 (Figure 2.2).

Despite the decline observed in the period examined OIC average fertility rate, 3.55 births per woman, in 2016 was still more than the world average of 2.72. As long as the fertility rate is equal to or above 2.1 children per woman which is the replacement rate, a population will remain stable. Overall, with average 3.55 births per woman, OIC community as a whole is above the critical replacement level but trend is going downward.

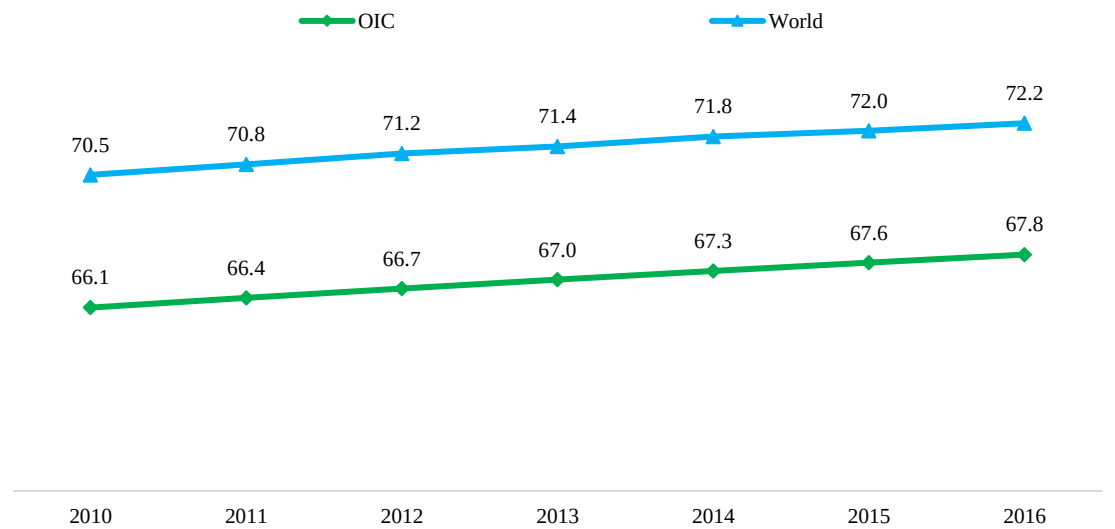

Figure 2.2: Total Fertility Rate, 2010-2016

Source: World Bank, World Development Indicators

Among the OIC member countries, Iran had the lowest number of births per woman, 1.66, in 2016. In total, with fertility rates below 2.1, 12 OIC member countries namely; Iran, Albania, Lebanon, UAE, Brunei, Qatar, Azerbaijan, Kuwait, Bahrain, Malaysia, Turkey and Maldives were below the minimum replacement rate. In addition, Tunisia and Libya with births per woman equal to 2.20 and 2.27 have been approaching to the replacement rate border value. (Table 2.1). Average life expectancy at birth of the OIC member countries, although has improved sensibly from 66.1 years to 67.8 years over the period under consideration, it was still below the World average of 72.2. years (Figure 2.3). Only 6 OIC member countries namely; Lebanon, Albania, Qatar, Maldives, UAE and Brunei have achieved higher life expectancy rates than the World average of 72.2 years. In contrast, the life expectancy rates were below the OIC average across the 26 member countries. (Table 2.8)

Table 2.18: Definitions of Demography Indicators

INDICATOR	DEFINITION
Fertility Rate	Total fertility rate represents the number of children that would be born to a woman if she were to live to the end of her childbearing years and bear children in accordance with current age-specific fertility rates.
Growth Rate of Population, Annual	Annual population growth rate. Population is based on the de facto definition of population, which counts all residents regardless of legal status or citizenship--except for refugees not permanently settled in the country of asylum, who are generally considered part of the population of the country of origin.
Growth Rate of Population, Natural	Subtracting the crude death rate from the crude birth rate provides the rate of natural increase, which is equal to the population growth in the absence of migration.
Households	A household consists of all persons—related family members and all unrelated persons—who occupy a housing unit and have no other usual address. A house, an apartment, a group of rooms, or a single room is regarded as a housing unit when occupied or intended for occupancy as separate living quarters. A householder is the person (or one of the persons) in whose name the housing unit is owned or rented. The term is never applied to either husbands or wives in married-couple families but relates only to persons in families maintained by either men or women without a spouse.
International Migrant Stock, % of population	International migrant stock is the number of people born in a country other than that in which they live. It also includes refugees. The data used to estimate the international migrant stock at a particular time are obtained mainly from population censuses. The estimates are derived from the data on foreign-born population--people who have residence in one country but were born in another country.
Life Expectancy at Birth, Female	Life expectancy at birth indicates the number of years a newborn female infant would live if prevailing patterns of mortality at the time of its birth were to stay the same throughout its life.
Life Expectancy at Birth, Male	Life expectancy at birth indicates the number of years a newborn male infant would live if prevailing patterns of mortality at the time of its birth were to stay the same throughout its life.
Life Expectancy at Birth, Total	Life expectancy at birth indicates the number of years a newborn infant would live if prevailing patterns of mortality at the time of its birth were to stay the same throughout its life.
Population Density	Population density is midyear population divided by land area in square kilometers. Population is based on the de facto definition of population, which counts all residents regardless of legal status or citizenship--except for refugees not permanently settled in the country of asylum, who are generally considered part of the population of their country of origin. Land area is a country's total area, excluding area under inland water bodies, national claims to continental shelf, and exclusive economic zones. In most cases the definition of inland water bodies includes major rivers and lakes.

INDICATOR	DEFINITION
Population, Ages 0-14, % of Total	Population between the ages 0 to 14 as a percentage of the total population. Population is based on the de facto definition of population.
Population, Ages 15-64, % of Total	Population ages 15 to 64 is the percentage of the total population that is in the age group 15 to 64. Population is based on the de facto definition of population.
Population, Ages 65+, % of Total	Population ages 65 and above as a percentage of the total population. Population is based on the de facto definition of population.
Population, Female, % of Total	Female population is the number of population that is female. Population is based on the de facto definition of population.
Population, Rural, % of Total	Rural population refers to people living in rural areas as defined by national statistical offices. It is calculated as the difference between total population and urban population.
Population, Urban, % of Total	Urban population refers to people living in urban areas as defined by national statistical offices. The data are collected and smoothed by United Nations Population Division.
Refugee Population by Country or Territory of Asylum	Refugees are people who are recognized as refugees under the 1951 Convention Relating to the Status of Refugees or its 1967 Protocol, the 1969 Organization of African Unity Convention Governing the Specific Aspects of Refugee Problems in Africa, people recognized as refugees in accordance with the UNHCR statute, people granted refugee-like humanitarian status, and people provided temporary protection. Asylum seekers--people who have applied for asylum or refugee status and who have not yet received a decision or who are registered as asylum seekers--are excluded. Palestinian refugees are people (and their descendants) whose residence was Palestine between June 1946 and May 1948 and who lost their homes and means of livelihood as a result of the 1948 Arab-Israeli conflict. Country of asylum is the country where an asylum claim was filed and granted.
Refugee Population by Country or Territory of Origin	Refugees are people who are recognized as refugees under the 1951 Convention Relating to the Status of Refugees or its 1967 Protocol, the 1969 Organization of African Unity Convention Governing the Specific Aspects of Refugee Problems in Africa, people recognized as refugees in accordance with the UNHCR statute, people granted refugee-like humanitarian status, and people provided temporary protection. Asylum seekers--people who have applied for asylum or refugee status and who have not yet received a decision or who are registered as asylum seekers--are excluded. Palestinian refugees are people (and their descendants) whose residence was Palestine between June 1946 and May 1948 and who lost their homes and means of livelihood as a result of the 1948 Arab-Israeli conflict. Country of origin generally refers to the nationality or country of citizenship of a claimant.

3 EDUCATION

According to the most recent year data from 2010 to 2017, on average 3.7% of the total GDP of the OIC member countries was allocated to the public education. The share of education expenditures in GDP was higher or equal to the World average of 4.8% in 11 out of 42 OIC member countries with available data over the same period (Figure 3.1). Among these countries, Senegal took the lead by allocating 7.1% of the country's GDP for education. Tunisia and Mozambique followed Senegal, with the education expenditures shares in the GDP equal to 6.6% and 6.5%, respectively. Oman and Niger spent about 6.2% and 6.0% of their GDPs' on education. Kyrgyzstan, Palestine, Tajikistan, Togo, Cote d'Ivoire and Malaysia were also among the top 11 OIC member countries by having spent significant part of their budget, equivalent to more than 4.8% of the GDP, on education (Table 3.2).

Figure 3.1: Government Expenditures on Education, % of GDP, 2010-2017*

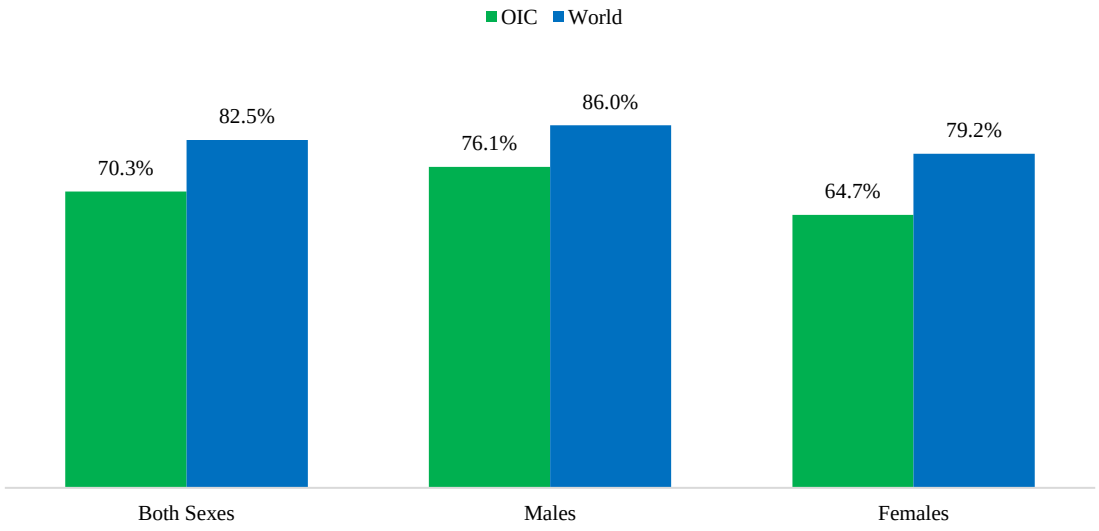

Source: World Bank, World Development Indicators, * Latest Year Available between 2010-2017

The OIC average adult literacy rates for both sexes for the period 2010-2016 was 70.3%, almost 10 percentage points lower than the World average of 82.5% (Figure 3.2). This figure was slightly lower for male adult literacy rate, 76.1% in OIC, in comparison to 86.0% in the World as a group. There was a significant higher divergence between the female and male literacy rates in OIC countries compared to the World. Female adult literacy rate of OIC member countries was 64.7%, which was 11.3% lower compared to male counterparts while it was 79.2% in the World only 6.8% lower than male adult literacy rate (Tables: 3.15, 3.16, 3.17).

At the individual country level, 19 OIC member countries with available data had adult literacy rates higher than the World average during the period examined. Astonishingly the highest performance had been observed in Uzbekistan (100%), Azerbaijan (99.8%), Kazakhstan (99.8%), Maldives (98.6%) and Jordan (97.9%). On the other hand, more than a half of the adult population was illiterate for the period examined in 14 OIC member countries. Among them, catastrophically the lowest were Niger (15.5%) and Chad (22.3%).

From the Figure 3.3, we can observe that the OIC average gross enrolment rate (GER) at all levels; pre-primary, primary, secondary and tertiary, has increased between 2010 and 2016. This upward trend was especially striking for the average GER in tertiary education as the positive momentum caught led to a remarkable, 12-percentage points increase from 19.6% to 31.6%, over the period under review. Meanwhile, the GER of the World improved from 37.2% to 45.2%. 17 OIC member countries, all of them were from MENA and ECA regions, had gross enrolment rates in tertiary education above the OIC average as a group. Among them 6 OIC member countries, namely; Iran (68.9%), Saudi Arabia (66.6%),

Figure 3.2: Adult Literacy Rate, as % of Population, 2010-2016*

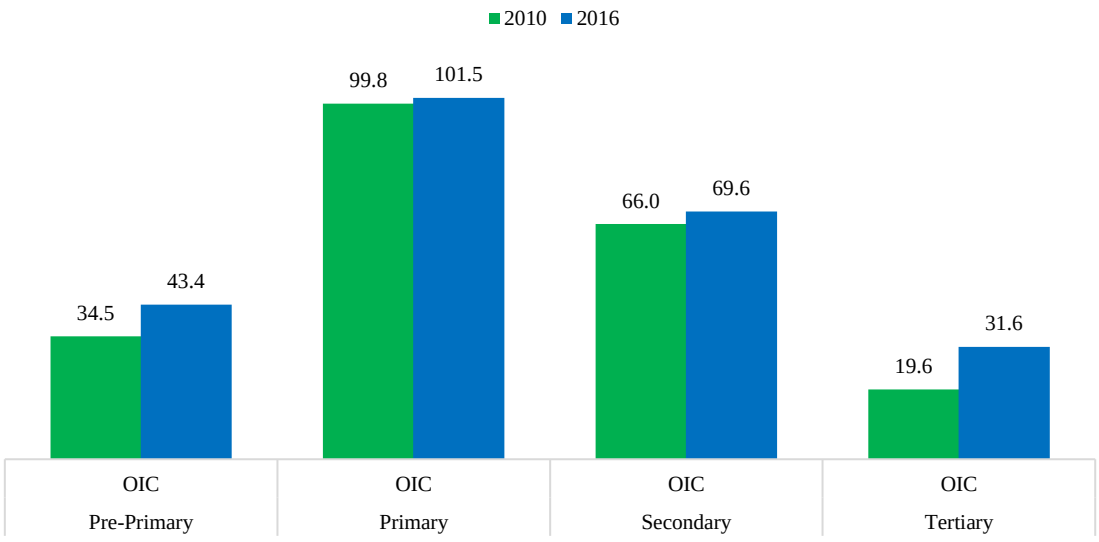

Source: UNESCO, UIS Database, *Latest Year Available between 2010-2016

Albania (61.2%), Bahrain (46.6%), Kazakhstan (46.1%) and Kyrgyzstan (45.9%) performed above the World average of 45.2% in 2016. GER of the OIC had a considerable improvement during the period studied, although, it was still below the World average. In pre-primary level education, OIC GER reached to 43.4% compared to 66.6% of the World, similarly, in primary 101.5% compared to 104.3%, secondary 69.6% compared to 85.9%.

At the individual country level, across the 9 OIC member countries GER to pre-primary schools were above the World average. At the primary level, 16 OIC member countries achieved the GER above the World average. At the secondary and tertiary education levels, the number of OIC member countries achieved higher levels of GER compared to the World were equal to 12 and 6 respectively (Tables: 3.5, 3.8, 3.11, and 3.14).

Table 3.34: Definitions of Education Indicators

INDICATOR	DEFINITION
Education Expenditure, Current, Public , % of Total Public Expenditure on Education	Public current expenditure on education expressed as a percentage of total public expenditure on education (current and capital) in a given financial year. It shows the share of current expenditure within total public expenditure, thereby indicating the pattern of government spending on education in terms of the relative weight between current and capital expenditure.
Education Expenditure, Public, % of GDP	Total public expenditure (current and capital) on education expressed as a percentage of the Gross Domestic Product (GDP) in a given year. This indicator shows the proportion of a country's wealth generated during a given year that has been spent by government authorities on education.
Gross Enrolment Rate in Pre-Primary Schools, Female	Ratio of all the enrolled girls in pre-primary schools, regardless of age, to the population in the theoretical age group for this level of education.
Gross Enrolment Rate in Pre-Primary Schools, Male	Ratio of all the enrolled boys in pre-primary schools, regardless of age, to the population in the theoretical age group for this level of education.
Gross Enrolment Rate in Pre-Primary Schools, Total	Ratio of all the enrolled pupils in pre-primary schools, regardless of age, to the population in the theoretical age group for this level of education.
Gross Enrolment Rate in Primary Schools, Female	Ratio of all the enrolled girls in primary schools, regardless of age, to the population in the theoretical age group for this level of education.
Gross Enrolment Rate in Primary Schools, Male	Ratio of all the enrolled boys in primary schools, regardless of age, to the population in the theoretical age group for this level of education.
Gross Enrolment Rate in Primary Schools, Total	Ratio of all the enrolled pupils in primary schools, regardless of age, to the population in the theoretical age group for this level of education.
Gross Enrolment Rate in Secondary Schools, Female	Ratio of all the enrolled girls in secondary schools, regardless of age, to the population in the theoretical age group for this level of education.
Gross Enrolment Rate in Secondary Schools, Male	Ratio of all the enrolled boys in secondary schools, regardless of age, to the population in the theoretical age group for this level of education.
Gross Enrolment Rate in Secondary Schools, Total	Ratio of all the enrolled pupils in secondary schools, regardless of age, to the population in the theoretical age group for this level of education.
Gross Enrolment Rate in Tertiary Schools, Female	Ratio of all the enrolled female students of universities, regardless of age, to the theoretical age group of tertiary schools. For tertiary level, the population used is the five-year age group following on from the secondary school leaving age.
Gross Enrolment Rate in Tertiary Schools, Male	Ratio of all the enrolled male students of universities, regardless of age, to the theoretical age group of tertiary schools. For tertiary level, the population used is the five-year age group following on from the secondary school leaving age.
Gross Enrolment Rate in Tertiary Schools, Total	Ratio of all the enrolled students of universities, regardless of age, to the theoretical age group of tertiary schools. For Primary level, the population used is the five-year age group following on from the secondary school leaving age.
Literacy Rate, Adult, Female	Percentage of the female population of 15 years and older that is able to read, write and thus fully participate in the wider society.
Literacy Rate, Adult, Male	Percentage of the male population of 15 years and older that is able to read, write and thus fully participate in the wider society.
Literacy Rate, Adult, Total	Percentage of the population of 15 years and older that is able to read, write and thus fully participate in the wider society.

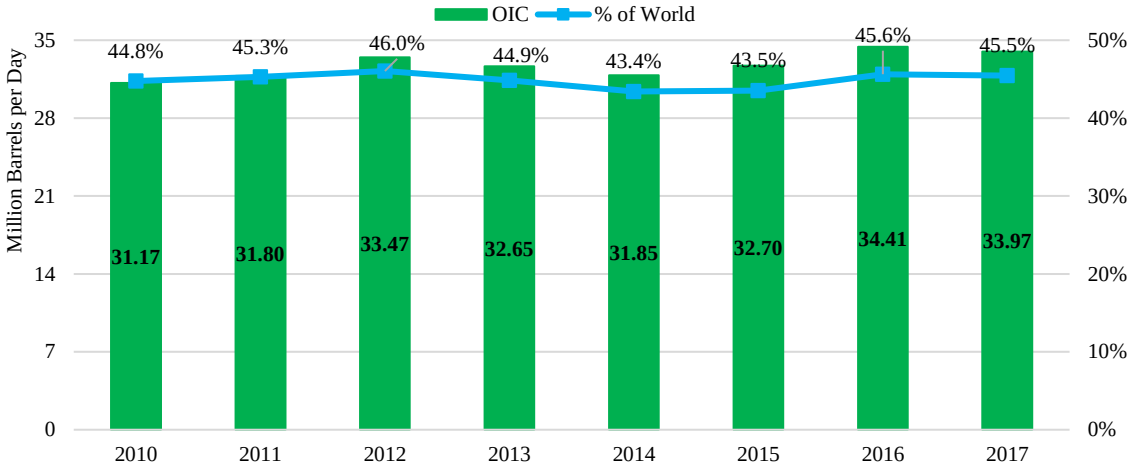

INDICATOR	DEFINITION
Literacy Rate, Youth, Female	Percentage of the female population aged between 15 and 24 that is able to read, write and thus to fully participate in the wider society.
Literacy Rate, Youth, Male	Percentage of the male population aged between 15 and 24 that is able to read, write and thus to fully participate in the wider society.
Literacy Rate, Youth, Total	Percentage of the population aged between 15 and 24 that is able to read, write and thus to fully participate in the wider society.
Net Enrolment Rate, Pre-Primary Schools, Female	Ratio of all girls of the theoretical school-age group for pre-primary schools, expressed as a percentage of the total population in that age-group.
Net Enrolment Rate, Pre-Primary Schools, Male	Ratio of all boys of the theoretical school-age group for pre-primary schools, expressed as a percentage of the total population in that age-group.
Net Enrolment Rate, Pre-Primary Schools, Total	Ratio of all pupils of the theoretical school-age group for pre-primary schools, expressed as a percentage of the total population in that age-group.
Net Enrolment Rate, Primary Schools, Female	Ratio of all girls of the theoretical school-age group for primary schools, expressed as a percentage of the total population in that age-group.
Net Enrolment Rate, Primary Schools, Male	Ratio of all boys of the theoretical school-age group for primary schools, expressed as a percentage of the total population in that age-group.
Net Enrolment Rate, Primary Schools, Total	Ratio of all pupils of the theoretical school-age group for primary schools, expressed as a percentage of the total population in that age-group.
Net Enrolment Rate, Secondary Schools, Female	Ratio of all girls of the theoretical school-age group for secondary schools, expressed as a percentage of the total population in that age-group.
Net Enrolment Rate, Secondary Schools, Male	Ratio of all boys of the theoretical school-age group for secondary schools, expressed as a percentage of the total population in that age-group.
Net Enrolment Rate, Secondary Schools, Total	Ratio of all pupils of the theoretical school-age group for secondary schools, expressed as a percentage of the total population in that age-group.
Student-Teacher Ratio, Pre-Primary Schools	Average number of pupils (students) per teacher at pre-primary schools in a given school-year, based on headcounts for both pupils and teachers.
Student-Teacher Ratio, Primary Schools	Average number of pupils (students) per teacher at primary schools in a given school-year, based on headcounts for both pupils and teachers.
Student-Teacher Ratio, Secondary Schools	Average number of pupils (students) per teacher at secondary schools in a given school-year, based on headcounts for both pupils and teachers.
Student-Teacher Ratio, Tertiary Schools	Average number of students per teacher at tertiary schools in a given school-year, based on headcounts for both students and teachers

4 ENERGY

Generally, in OIC member countries, crude oil and natural gas considered as the main energy resources. The total production of crude oil in the OIC member countries increased from 31.2 million barrels per day (m.b/day) in 2010 to 34 m.b/day in 2017. The share of the OIC member countries in the World total production of crude oil was around 44.8% in 2010; it increased to 45.5% in 2017. A reasonable drop in the OIC shares was observed in the years 2013, 2014 and 2015 together with the contraction of crude oil production of the OIC member countries, because of the sharp fall in the energy resources prices at the global commodities markets during these years (Figure 4.1).

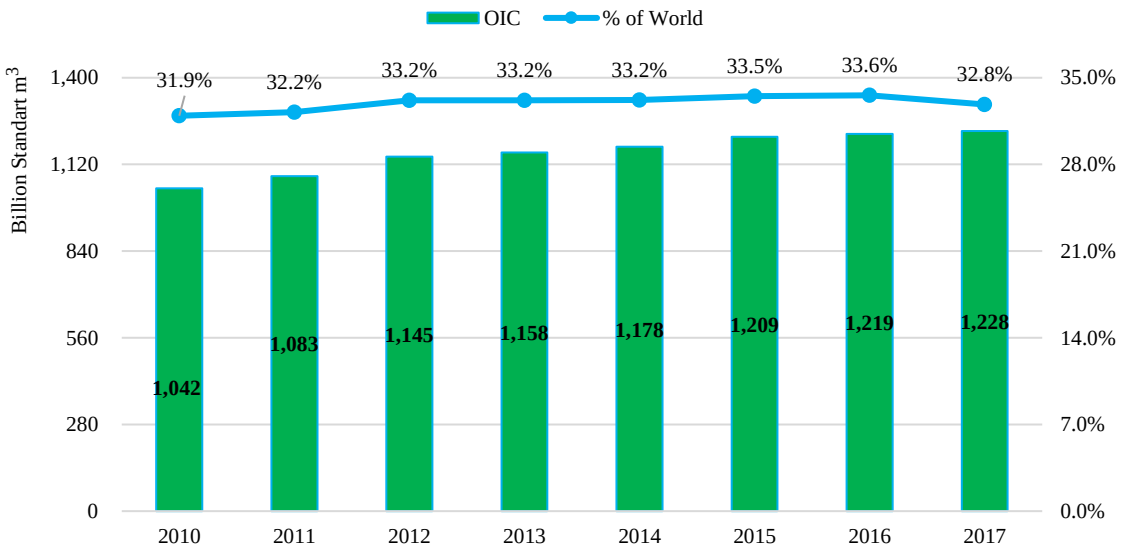

Figure 4.1: Production of Crude Oil, 2010-2017

Source: OPEC, Annual Statistical Bulletin

Among 23 oil producing OIC member countries, with the production level of almost 9.96 m.b/day Saudi Arabia alone accounted for 29.3% of the total OIC crude oil production in 2017. Saudi Arabia was followed by Iraq, Iran, UAE and Kuwait with the shares of 13.2%, 11.4%, 8.7%, and 8.0%, respectively in the OIC crude oil production. On the other hand, five OIC member countries with the least volumes of crude oil mines, namely; Syria, Yemen, Turkey, Brunei, and Turkmenistan together were responsible for only 1.1% of the total OIC crude oil production in 2017 (Table 1.12).

Figure 4.2: Natural Gas Production, 2010-2017

Source: OPEC, Annual Statistical Bulletin

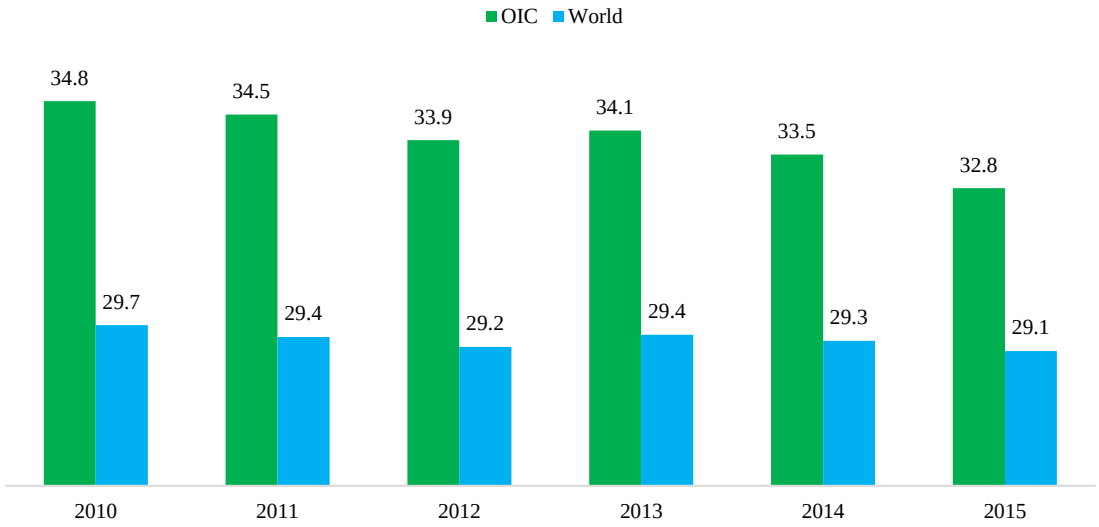

In terms of the change between 2010 and 2017, crude oil extraction increased by 7.3% globally and by 9% in OIC as a group. At the individual country level, the highest increase in the crude oil production has been seen in Iraq, 89.5%, from 2.36 m.b/day to 4.47 m.b/day. Following Iraq significant increases has been achieved by UAE (27.7%), Saudi Arabia (22.0%), Kuwait (17.0%) and Oman (16.6%). In contrast, crude oil production declined across 12 OIC member countries over the period under consideration, particularly in Syrian by 95.7% and Yemen by 88.1%

The 1,228 billion standard cubic meters (bscm) of natural gas production in OIC member countries constituted 32.8% of the global production in 2017. This figure was equal to 31.9% or 1,042 bscm in 2010 (Figure 4.2). At the individual country level, Iran had the largest share of 19.4%, with the production level of 238 bscm of natural gas in 2017.

Following Iran top 3 natural gas producers among OIC member countries were Qatar with 163.6 bscm and Saudi Arabia 115 bscm accounted for 13.3% and 9.4% of the OIC total natural gas production in the same year.

The natural gas extraction has increased by 14.5% in the World and by 17.8% in OIC as a group, from 2010 to 2017. The most striking growth of the natural gas production has been observed in Gabon from 80 million scm to 407 million scm, and in Cameroon from 210 million scm to 730 million scm, equivalent to 408.7% and 247.8% increases. Following these countries, also Turkmenistan, Nigeria and Kuwait have demonstrated significant rises in their natural gas extraction by 93.9%, 61.7% and 45.8% respectively. On the other hand, natural gas mining has declined from its 2010 levels across 5 OIC member countries, namely; Egypt, Libya, Indonesia, Uzbekistan and Pakistan.

Figure 4.3: Renewable Energy Consumption, % of Total, 2010-2015

Source: World Bank, World Development Indicators

Increasing the share of alternative energy sources in the total energy generation as well as consumption has been among the priority areas in OIC and globally. The renewable energy consumption share in the final energy consumption of the OIC member countries declined from 34.8% to 32.8% between 2010 and 2015. Despite the fall down, OIC as a group indicated higher share of renewable energy sources in the energy consumption compared to the World average of 29.1% in 2015. At the individual country level, most striking performances were observed in Somalia where 94.3% of the total energy consumption came from renewable energy sources. Somali was followed by Chad with 89.4% and Uganda with 89.1% shares of alternative energy sources in the total energy consumption in the country. Overall, across the top performing 18 OIC member countries, namely; Somalia, Chad, Uganda, Guinea-Bissau, Nigeria, Mozambique, Gabon, Niger, Sierra Leone, Cameroon, Guinea, Burkina Faso, Togo, Cote d'Ivoire, Sudan, Mali, Gambia, Benin, the consumption of the energy from renewable energy sources has been above 50% of the total energy consumption of the country (Table 4.15).

Table 4.17: Definitions of Energy Indicators

INDICATOR	DEFINITION
Access to Electricity (% of Population)	Access to electricity is the percentage of population with access to electricity. Electrification data are collected from industry, national surveys and international sources.
Access to Electricity, Rural (% of Rural Population)	Access to electricity, rural is the percentage of rural population with access to electricity.
Access to Electricity, Urban (% of Urban Population)	Access to electricity, urban is the percentage of urban population with access to electricity.
Adjusted Savings: Energy Depletion	Energy depletion is the ratio of the value of the stock of energy resources to the remaining reserve lifetime (capped at 25 years). It covers coal, crude oil, and natural gas.
Adjusted Savings: Energy Depletion (% of GNI)	Energy depletion is the ratio of the value of the stock of energy resources to the remaining reserve lifetime (capped at 25 years). It covers coal, crude oil, and natural gas.
Alternative and Nuclear Energy (% of Total Energy Use)	Clean energy is non-carbohydrate energy that does not produce carbon dioxide when generated. It includes hydropower and nuclear, geothermal, and solar power, among others.
Energy Imports, Net (% of Energy Use)	Net energy imports are estimated as energy use less production, both measured in oil equivalents. A negative value indicates that the country is a net exporter. Energy use refers to use of primary energy before transformation to other end-use fuels, which is equal to indigenous production plus imports and stock changes, minus exports and fuels supplied to ships and aircraft engaged in international transport.
Energy Intensity Level of Primary Energy	Energy intensity level of primary energy is the ratio between energy supply and gross domestic product measured at purchasing power parity. Energy intensity is an indication of how much energy is used to produce one unit of economic output. Lower ratio indicates that less energy is used to produce one unit of output.
Energy Use (kg oil equivalent) per $1,000 GDP	Energy use per PPP GDP is the kilogram of oil equivalent of energy use per constant PPP GDP. Energy use refers to use of primary energy before transformation to other end-use fuels, which is equal to indigenous production plus imports and stock changes, minus exports and fuels supplied to ships and aircraft engaged in international transport. PPP GDP is gross domestic product converted to 2011 constant international dollars using purchasing power parity rates. An international dollar has the same purchasing power over GDP as a U.S. dollar has in the United States.
GDP per Unit of Energy Use, Constant 2011 PPP USD per kg of Oil Equivalent	GDP per unit of energy use is the PPP GDP per kilogram of oil equivalent of energy use. PPP GDP is gross domestic product converted to 2011 constant international dollars using purchasing power parity rates. An international dollar has the same purchasing power over GDP as a U.S. dollar has in the United States.
GDP per Unit of Energy Use, PPP $ per kg of Oil Equivalent	GDP per unit of energy use is the PPP GDP per kilogram of oil equivalent of energy use. PPP GDP is gross domestic product converted to current international dollars using purchasing power parity rates based on the 2011 ICP round. An international dollar has the same purchasing power over GDP as a U.S. dollar has in the United States.
Production of Crude Oil	Crude oil is a mixture of hydrocarbons that exist in a liquid phase in natural underground reservoirs and remains liquid at atmospheric pressure after passing through surface separating facilities
Production of Natural Gas, World Marketed	Natural Gas is a mixture of hydrocarbon compounds and small quantities of various non-hydrocarbons existing in the gaseous phase or in solution with oil in natural underground reservoirs at reservoir conditions.
Renewable Electricity Output (% of Total Electricity Output)	Renewable electricity is the share of electricity generated by renewable power plants in total electricity generated by all types of plants.
Renewable Energy Consumption (% of Total Final Energy Consumption)	Renewable energy consumption is the share of renewables energy in total final energy consumption.
Rents, Coal % of GDP	Coal rents are the difference between the value of both hard and soft coal production at world prices and their total costs of production.

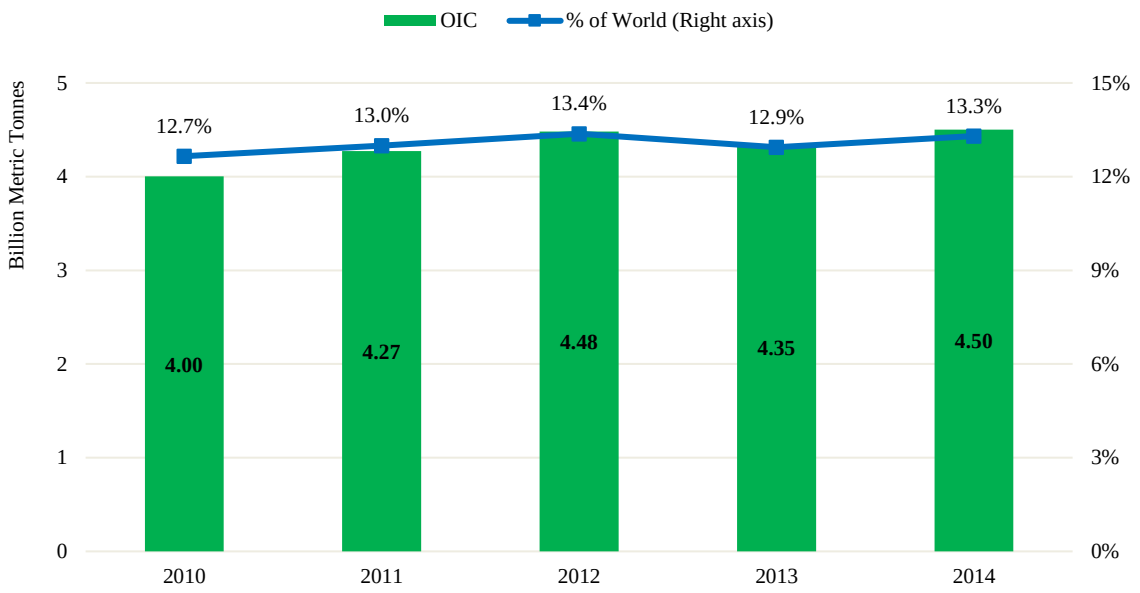

5 ENVIRONMENT

Climate change has been among the utmost important global issues and Climate Action was included as the goal 13 under the Sustainable Development Goals. In order to mitigate the changes in the earth's climate before it may became uncontrollable, major actions has to be taken at the international level to reduce anthropogenic CO_2 emissions originating from energy, transport, agriculture and industry sectors.

In 2014, OIC countries emitted 4.5 billion tonnes of CO_2 because of all activities. This represented a 12.5% increase in CO_2 emissions when compared with 2010, which was an increase of 0.5 billion tonnes. From the year 2010, the amount of CO_2 emissions slightly increase until reaching 4.48 billion tonnes in 2012 then it dropped to 4.35 billion tonnes in 2013 and reached the peak point of 4.5 billion tonnes in 2014. OIC countries emitted only 13.3% of world CO_2 emissions in 2014. This was a 0.6 percentage point increase from the 2010 level of 12.7% (Figure 5.1).

Among the OIC member countries, more than half of the total OIC CO_2 emissions in 2014 were coming from only five countries. These countries were Iran, which had 14.4% of the total OIC emissions, followed by Saudi Arabia (13.4%) Indonesia (10.3%), Turkey (7.7%) and Kazakhstan (5.5%) (Table 5.1).

Figure 5.1: CO_2 Emissions, 2010-2014

Source: World Bank, World Development Indicators

Given the fact that, countries with relatively smaller economies and populations are more likely to emit less greenhouse gases (GHG) compared the more advanced countries. In other words, a positive relationship has been observed between emissions per capita and income per capita. In this context, assessing country's performance by looking at GHG emission per-capita would reveal more robust picture. This indicator would tells us how much, on average, a person emitted GHG within the specific period. In 2014, OIC member countries emitted 2.65 metric tonnes per capita, way below the World average, which was 4.68 metric tonnes per capita. At the individual country level, only 13 OIC countries recorded CO_2 emissions per capita above the World average in 2014. Among them, most striking level of per capita CO_2 emissions was seen in Qatar, 45.4 metric tonnes. Qatar was followed by Kuwait with 25.2 metric tonnes and Bahrain with 23.4 metric tonnes per capita. On the other extreme, astonishingly the lowest intensity of CO_2 emissions per capita were recorded in Somali only 0.05 metric tonnes, Chad 0.05 metric tonnes and Mali 0.08 metric tonnes per capita in 2014 (Table 5.2).

Table 5.4: Definitions of Environment Indicators

INDICATOR	DEFINITION
Carbon Dioxide (CO_2) Emissions	Estimates of total carbon dioxide emissions include anthropogenic emissions, less removal by sinks, of carbon dioxide. The term "total" implies that emissions from all national activities are considered. The typical sectors for which carbon dioxide emissions/removals are estimated are energy, industrial processes, agriculture, waste, and the sector of land use, land-use change and forestry.
Carbon Dioxide Emissions (CO_2) per Capita	Carbon dioxide emissions per capita are measured as the total amount of carbon dioxide emitted by the country as a consequence of all relevant human (production and consumption) activities, divided by the population of the country
Consumption of All Ozone-Depleting CFCs	This indicator is used to monitor the reduction in the usage of Ozone Depleting Chlorofluorocarbons (CFCs) as a result of the Montreal Protocol. Therefore only chlorofluorocarbons controlled under the Montreal Protocol are covered by the indicator. The Units of Measurement are metric tons of ODS weighted by their Ozone Depletion Potential (ODP), otherwise referred to as ODP tons.

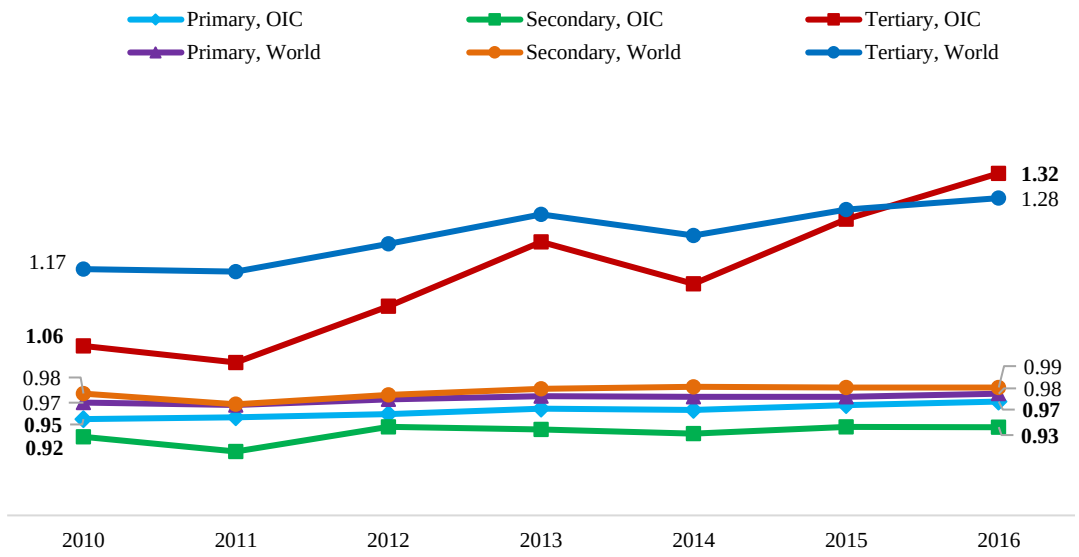

6 GENDER AND FAMILY

The Gender Parity Index (GPI) is a simple index designed to reveal the differences between the genders across the basic socio-economic indicators. Most commonly, GPI has been used to examine whether both genders have been provided with the equal opportunities to access education and other economic empowerment opportunities including the participation in the labour force and enrolment in education. A GPI value equal or close to one indicates that equality (parity) in terms of gender has been achieved in that particular area, whereas a value higher/lower than one indicates progress in favour of females/males.

The GPI for gross enrolment rate (GER) in primary level education of OIC member countries on average grew from 0.95 in 2010 to 0.97 in 2016, although it shows some improvement it was still below one, the optimum level of gender parity. It means that, GER of females in primary level has been lower than the population of males in the same age group. Meanwhile, World average GPI in primary level GER also improved from 0.97 to 0.98, over the same period. Overall, even the global average GPI for GER at the primary level has not achieved yet the perfect parity level; it was still above the OIC average as a group (Figure 6.1). At the individual country level, 15 OIC member countries recoded the GPI values for GER in primary education above one. Particularly, most distinguished vales were recorded by Senegal, Gambia, Mauritania, Bangladesh and Kuwait (Table 6.3).

GPI for GER in secondary schools has been higher compared to the GPI for GER in primary schools, reflecting the amplified access for females to secondary school education compared to the primary level education among younger generations. GPI for GER in secondary schools in OIC member countries slightly fluctuated and reached 0.93 from 2010 to 2016. Meanwhile, the World average GPI for GER in secondary schools stably increased from 0.98 to 0.99 (Figure 6.1). Overall, 12 OIC member countries revealed the GPI values above one for GER in secondary education; among them the highest performances have been achieved by Qatar, Tunisia, Bangladesh, Palestine and Malaysia (Table 6.4)

Figure 6.1: GPI for GER in Primary, Secondary and Tertiary Schools, 2010 - 2016

Source : UNESCO, UIS Database

The OIC Countries as a whole also continued to close the gap with World average in terms of gender equality in tertiary school enrolment rates. The average GPI for GER in tertiary schools of the OIC member countries increased from 1.06 in 2010 to 1.32 in 2016, which was above the World average of 1.28 in 2016. In the case of tertiary education inequality is against males, which means that more female students have been enrolled in tertiary education. At the individual country level, 18 OIC member countries, had the GPI for GER in tertiary education above one, in particular, Qatar stand out with explicitly high GPI value, 7.37. Qatar was followed by some other MENA countries, such as UAE (1.99), Bahrain (1.86), Oman (1.82), and Tunisia (1.71) (Table 6.5).

Table 6.13: Definitions of Gender and Family Indicators

INDICATOR	DEFINITION
Gender Parity Index for Adult Literacy Rate	Ratio of female to male values of Adult Literacy Rate. The GPI measures progress towards gender parity in education participation and/or learning opportunities available for women in relation to those available to men. It also reflects the level of women's empowerment in society.
Gender Parity Index for Gross Enrolment Rate in Pre-Primary Schools	Ratio of female to male values of Gross Enrolment Rate in Pre-Primary Schools. The GPI measures progress towards gender parity in education participation and/or learning opportunities available for women in relation to those available to men. It also reflects the level of women's empowerment in society.
Gender Parity Index for Gross Enrolment Rate in Primary Schools	Ratio of female to male values of Gross Enrolment Rate in Primary Schools. The GPI measures progress towards gender parity in education participation and/or learning opportunities available for women in relation to those available to men. It also reflects the level of women's empowerment in society.
Gender Parity Index for Gross Enrolment Rate in Secondary Schools	Ratio of female to male values of Gross Enrolment Rate in Secondary Schools. The GPI measures progress towards gender parity in education participation and/or learning opportunities available for women in relation to those available to men. It also reflects the level of women's empowerment in society.
Gender Parity Index for Gross Enrolment Rate in Tertiary Schools	Ratio of female to male values of Gross Enrolment Rate in Tertiary Schools. The GPI measures progress towards gender parity in education participation and/or learning opportunities available for women in relation to those available to men. It also reflects the level of women's empowerment in society.
Gender Parity Index for Labour Force	Ratio of female to male values of labour force shares. The GPI measures progress towards gender parity in terms of economic participation and/or job opportunities available for women in relation to those available to men. It also reflects the level of women's empowerment in society.
Gender Parity Index for Labour Force Participation	Ratio of female to male values of labour force participation rates. The GPI measures progress towards gender parity in terms of economic participation and/or job opportunities available for women in relation to those available to men. It also reflects the level of women's empowerment in society.
Gender Parity Index for Life Expectancy at Birth	Ratio of female to male values of Life Expectancy at Birth.
Gender Parity Index for Net Enrolment Rate in Pre-Primary Schools	Ratio of female to male values of Net Enrollment Rate in Pre-Primary Schools. The GPI measures progress towards gender parity in education participation and/or learning opportunities available for women in relation to those available to men. It also reflects the level of women's empowerment in society.
Gender Parity Index for Net Enrolment Rate in Primary Schools	Ratio of female to male values of Net Enrollment Rate in Primary Schools. The GPI measures progress towards gender parity in education participation and/or learning opportunities available for women in relation to those available to men. It also reflects the level of women's empowerment in society.
Gender Parity Index for Net Enrolment Rate in Secondary Schools	Ratio of female to male values of Net Enrollment Rate in Secondary Schools. The GPI measures progress towards gender parity in education participation and/or learning opportunities available for women in relation to those available to men. It also reflects the level of women's empowerment in society.
Gender Parity Index for Youth Literacy Rate	Ratio of female to male values of Youth Literacy Rate. The GPI measures progress towards gender parity in education participation and/or learning opportunities available for women in relation to those available to men. It also reflects the level of women's empowerment in society.

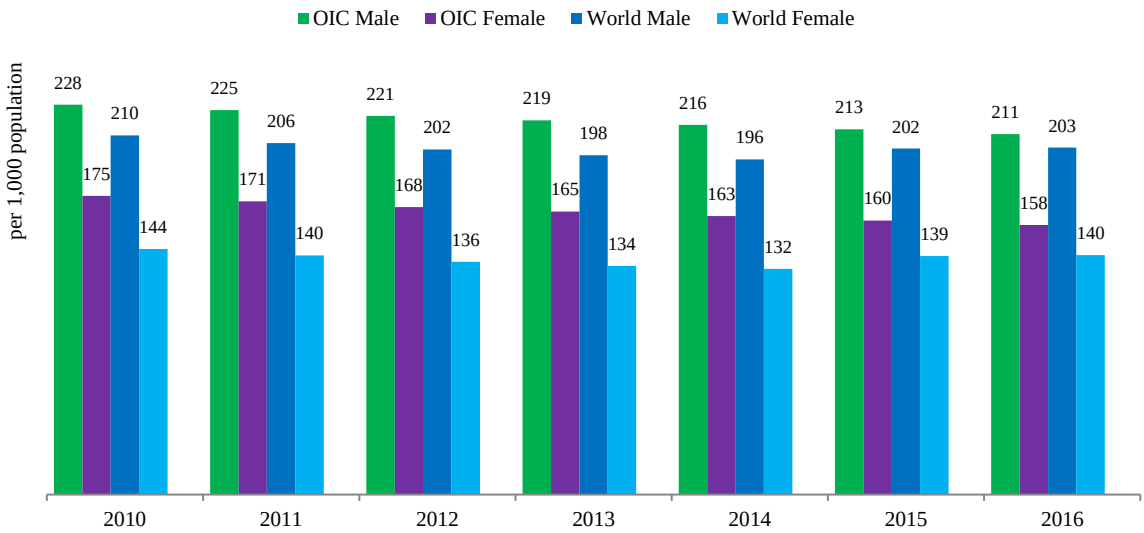

7 HEALTH

The adult mortality rate, both for males and females, in OIC member countries were improving over the period from 2010 to 2016. In 2010, mortality rates for males and females were 227.9 and 174.5 per 1,000 population, while in 2016 it declined to 210.7 and 157.6 per 1,000 population for male and female adults respectively. However, the adult mortality rates in OIC member countries were still higher than the World average adult mortality rate of 202.8 per 1,000 males and 139.9 per 1,000 females in 2016 (Figure 7.1). At the individual country level, in terms of the female adult mortality rate, 30 OIC member countries achieved better results compared to the World on average, in 2016. Top five of these countries, namely, Qatar (46.3), Lebanon (49.5), Albania (50.4), Maldives (54.9) and UAE (55.8) showed exceptionally distinct results (Table 7.11).

Across the 26 OIC member countries, male mortality rates were below the World average in 2016. Among them, most exceptional performance was demonstrated by Qatar (64.6), Lebanon (68.7), Bahrain (73.5) and Morocco (74.7), Maldives (77.8) (Table 7.12). With regard to government efforts in achieving lower mortality rates, improvements have been observed almost across all OIC member countries. The most sensible progress, in female mortality rate have been observed in Gabon, Iran, Mozambique, Senegal and Uganda between 2010 and 2015. Meanwhile, across the male counterparts top five OIC countries with the highest reductions, in the mortality rates over the same period has been monitored in Iran, Morocco, Albania, Mozambique and Lebanon.

Figure 7.1: Adult Mortality Rate of OIC Member Countries, 2010-2016

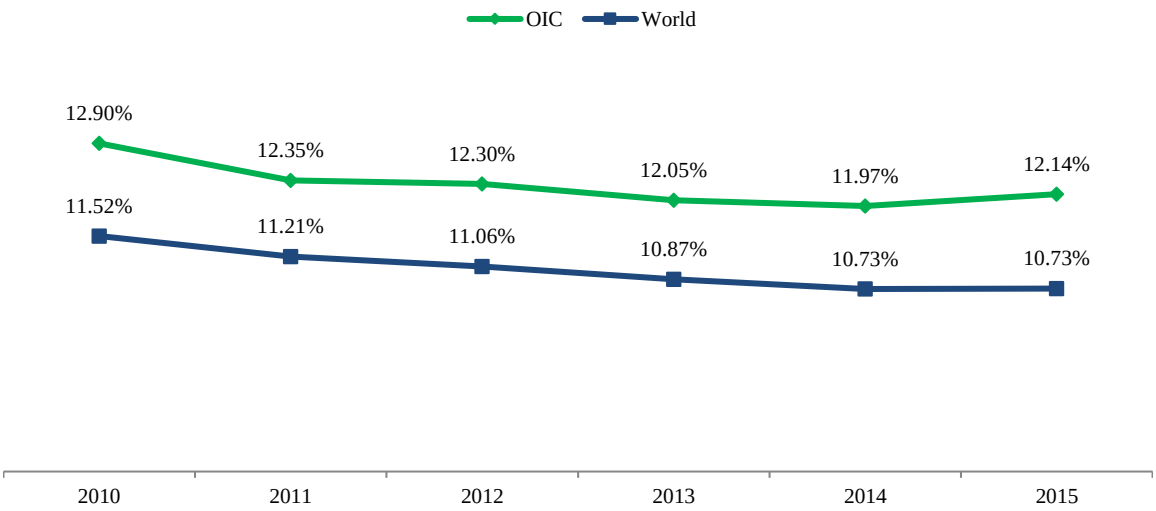

Source: World Bank, World Development Indicators

The prevalence of malnutrition important determinant of the health system in a country. Over the period from 2010 to 2015, OIC member countries have shown improvement in this regard by decreasing the prevalence of undernourishment from 12.9% to 12.1%. Similar development has been observed in the decreasing percentage of the undernourished population globally from 11.5% to 10.7% on average. Overall, in 30 OIC member countries malnutrition levels were below the global average, among them, six top performers, namely; Azerbaijan, Brunei, Kazakhstan, Kuwait Malaysia, and Turkey had the lowest prevalence of undernourishment at 2.5%.

In contrast, countries with the terribly high malnutrition levels, above 25%, were Uganda, Chad, Sierra Leone, Tajikistan, Yemen, Guinea-Bissau, Iraq, Mozambique and Sudan. The improvement in above discussed health indicators were observed to be parallel with the increments in government health expenditures. Increasing the health budget may have the positive impact on the improvement of healthiness and well-being of the population. Domestic general government health expenditure as percentage of GDP increased from 1.8% in 2010 to 2.2% in 2016. But this figure was still below the World average of 3.5 % in 2015 (Figure 7.3).

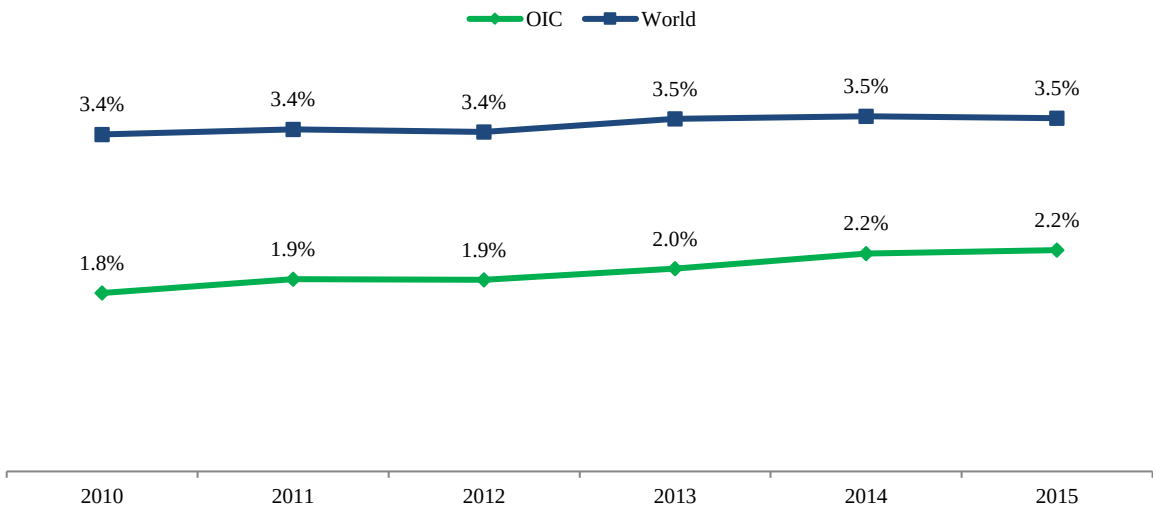

Figure 7.2: Prevalence of Undernourishment in OIC Member Countries, % of Population, 2010-2015

Source: World Bank, World Development Indicators (WDI)

At the individual country level, in 2015 eight OIC member countries performed better compared to the World average, of them, top 3 with the highest shares of health expenditures in GDP were Maldives with 9.4%, Algeria with 5% and Saudi Arabia with 4.2%. Iran, Tunisia, Lebanon, Kyrgyzstan, and Jordan followed them. In terms of change in the health expenditure share in GDP, between 2010 and 2015, Maldives achieved the largest increment from 3.1% in 2010 to 9.4% in 2015. In contrast, 14 OIC countries, namely; Libya, Jordan, Iraq, Syria, Yemen, Uganda, Kazakhstan, UAE, Djibouti, Benin, Egypt, Cameroon, Bangladesh and Niger have decreased their health expenditure share in GDP. The decrements were ranging from 2.4% to 0.1% of the GDP.

Table 7.26: Definitions of Health Indicators

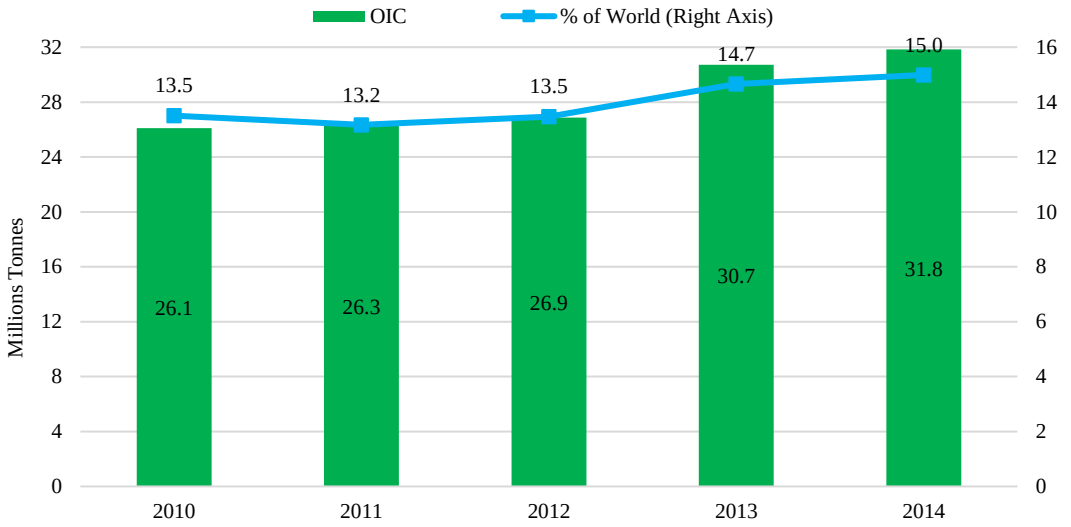

INDICATOR	DEFINITION
1-Year-Olds Immunized with DTP3	DTP3 immunization coverage is the percentage of one-year-olds who have received three doses of the combined diphtheria, tetanus toxoid and pertussis vaccine in a given year.
1-Year-Olds Immunized with HepB3	HepB3 immunization coverage is the percentage of one-year-olds who have received three doses of hepatitis B3 vaccine in a given year. Hib3 immunization coverage is the percentage of one-year-olds who have received three doses of Haemophilus influenza type B vaccine in a given year.
1-Year-Olds Immunized with Hib3	The percentage of one-year-olds who have received three doses of Haemophilus influenzae type B vaccine in a given year.
1-Year-Olds Immunized with MCV	Measles immunization coverage is the percentage of one-year-olds who have received at least one dose of measles-containing vaccine (MCV) in a given year. For countries recommending the first dose of measles vaccine in children over 12 months of age, the indicator is calculated as the proportion of children less than 24 months of age receiving one dose of measles-containing vaccine.
Births Attended by Skilled Health Personnel (%)	Births attended by skilled health staff are the percentage of deliveries attended by personnel trained to give the necessary supervision, care, and advice to women during pregnancy, labour, and the postpartum period; to conduct deliveries on their own; and to care for newborns.
Current Health Expenditure (% of GDP)	Level of current health expenditure expressed as a percentage of GDP. Estimates of current health expenditures include healthcare goods and services consumed during each year. This indicator does not include capital health expenditures such as buildings, machinery, IT and stocks of vaccines for emergency or outbreaks.
Dentists, Numbers	Includes dentists, dental assistants and dental technicians. Total number of other health service providers in the country (excepting physicians, nursing and midwifery personnel, dentistry personnel and community health workers).
Domestic General Government Health Expenditure (% of Current Health Expenditure)	Share of current health expenditures funded from domestic public sources for health. Domestic public sources include domestic revenue as internal transfers and grants, transfers, subsidies to voluntary health insurance beneficiaries, non-profit institutions serving households (NPISH) or enterprise financing schemes as well as compulsory prepayment and social health insurance contributions. They do not include external resources spent by governments on health.
Domestic General Government Health Expenditure (% of GDP)	Public expenditure on health from domestic sources as a share of the economy as measured by GDP.
Domestic General Government Health Expenditure (% of General Government Expenditure)	Public expenditure on health from domestic sources as a share of total public expenditure. It indicates the priority of the government to spend on health from own domestic public resources.
Mortality Rate, Adult, Female	Adult mortality rate, female, is the probability of dying between the ages of 15 and 60--that is, the probability of a 15-year-old female dying before reaching age 60, if subject to age-specific mortality rates of the specified year between those ages.
Mortality Rate, Adult, Male	Adult mortality rate, male, is the probability of dying between the ages of 15 and 60--that is, the probability of a 15-year-old male dying before reaching age 60, if subject to age-specific mortality rates of the specified year between those ages.
Mortality Rate, Infant	Infant mortality rate is the number of infants dying before reaching one year of age, per 1,000 live births in a given year.
Mortality Rate, Under-Five	Under-five mortality rate is the probability per 1,000 that a newborn baby will die before reaching age five, if subject to age-specific mortality rates of the specified year.
Mortality Ratio, Maternal	Maternal mortality ratio is the number of women who die from pregnancy-related causes while pregnant or within 42 days of pregnancy termination per 100,000 live births.

INDICATOR	DEFINITION
Nurses, Numbers	Total number of nursing and midwifery personnel in the country.
People Using at Least Basic Drinking Water Services (% of Population)	The percentage of people using at least basic water services. This indicator encompasses both people using basic water services as well as those using safely managed water services. Basic drinking water services is defined as drinking water from an improved source, provided collection time is not more than 30 minutes for a round trip. Improved water sources include piped water, boreholes or tubewells, protected dug wells, protected springs, and packaged or delivered water.
People Using at Least Basic Sanitation Services (% of Population)	The percentage of people using at least basic sanitation services, that is, improved sanitation facilities that are not shared with other households. This indicator encompasses both people using basic sanitation services as well as those using safely managed sanitation services. Improved sanitation facilities include flush/pour flush to piped sewer systems, septic tanks or pit latrines; ventilated improved pit latrines, compositing toilets or pit latrines with slabs.
Pharmacists, Numbers	Includes the total number of pharmaceutical personnel in the country.
Physicians, Numbers	Includes the total number of medical doctors (physicians) in the country.
Prevalence of HIV among 15-49 Years Old (%)	The prevalence of HIV among the population 15-49 years old the estimated number of adults aged 15-49 years with HIV infection, whether or not they have developed symptoms of AIDS, expressed as per cent of total population in that age group.
Prevalence of Undernourishment (% of Population)	Population below minimum level of dietary energy consumption (also referred to as prevalence of undernourishment) shows the percentage of the population whose food intake is insufficient to meet dietary energy requirements continuously. Data showing as 5 may signify a prevalence of undernourishment below 5%.
Tuberculosis: DOTS Case Detection Rate	The term ‘case detection’ means that TB is diagnosed in a patient and is reported within the national surveillance system, and then to WHO. The case detection rate is calculated as the number of new smear positive cases notified divided by the number of new smear positive cases estimated for that year, expressed as a percentage.
Tuberculosis: DOTS Treatment Success	The proportion of new smear-positive TB cases registered under DOTS in a given year that successfully completed treatment, whether with or without bacteriological evidence of success. At the end of treatment, each patient is assigned one of the following six mutually exclusive treatment outcomes: cured; completed; died; failed; defaulted; and transferred out with outcome unknown. The proportions of cases assigned to these outcomes, plus any additional cases registered for treatment but not assigned to an outcome, add up to 100% of cases registered.
Under-5 Moderately or Severely Underweight	Prevalence of (moderately and severely) underweight children is the percentage of children aged 0-59 months whose weights for age are less than two standard deviations below the median weight for age of the international reference population. The NCHS/WHO reference standard represents the distribution of height and weight by age and sex in a well-nourished population. In a well-nourished population, 2.3 percent of children fall below minus two standard deviations.

From 2010 to 2014, the amount of fertilizer production in OIC member countries have increased from 26.1 million tonnes to 31.8 million tonnes. As a result, the share of OIC in fertilizer production in the World also increased from 13.5% to 15.0% during the same period. Production of top five countries, namely; Indonesia (4.3 million tonnes), Egypt (3.8 million tonnes), Saudi Arabia (3.7 million tonnes), Pakistan (3.0 million tonnes) and Morocco (2.8 million tonnes) accounted for 55.3 % of the OIC total production of fertilizers in 2014 (Figure 8.1).

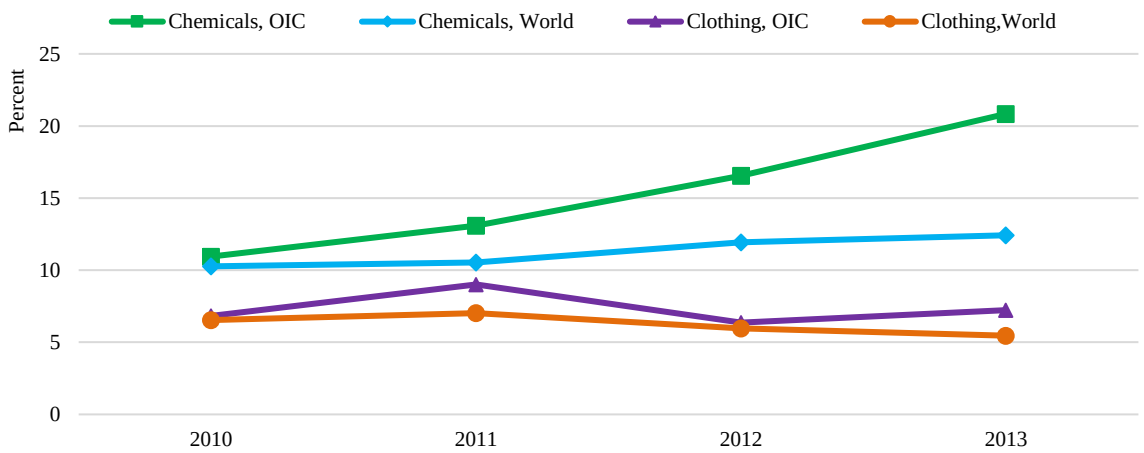

Figure 8.1: Production of Fertilizer, 2010-2016

Source : FAO, FAOSTAT Database

On average, share of chemicals in total value added was 20.8% for 12 OIC member countries with available data in 2013 (Figure 8.2). Among those member countries, Qatar took the lead with 61.6% of the value added in manufacturing from chemical which was followed by Oman, and Iran with value added of 51.5%, and 28.1%, respectively. On the other hand, share of textile and clothing in total value added was 7.2% for 13 OIC member countries with available data in 2013. Among them Albania took the lead with 30.1% of the value added in manufacturing from textile and clothing which was followed by Turkey and Indonesia with value added of 16.2%, and 11.1%, respectively.

Table 8.4: Definitions of Industry and Manufacturing Indicators

INDICATOR	DEFINITION
Chemicals, % of Value Added in Manufacturing	Value added in manufacturing is the sum of gross output less the value of intermediate inputs used in production for industries classified in ISIC major division 3. Chemicals comprise ISIC groups 351 and 352.
Production of Fertilisers	Fertilizer production refers to the different fertilizers (N, P, K and compounds) produced by a country. Production based on imported ammonia, phosphoric acid or rock phosphate is considered as national production, while that based on imported finished fertilizers (ammonium phosphate, potassium chloride, etc.) is excluded from national production to avoid double counting at the world level.
Textiles and Clothing , % of Value Added in Manufacturing	Value added in manufacturing is the sum of gross output less the value of intermediate inputs used in production for industries classified in ISIC major division 3. Textiles and clothing comprise ISIC division 32.

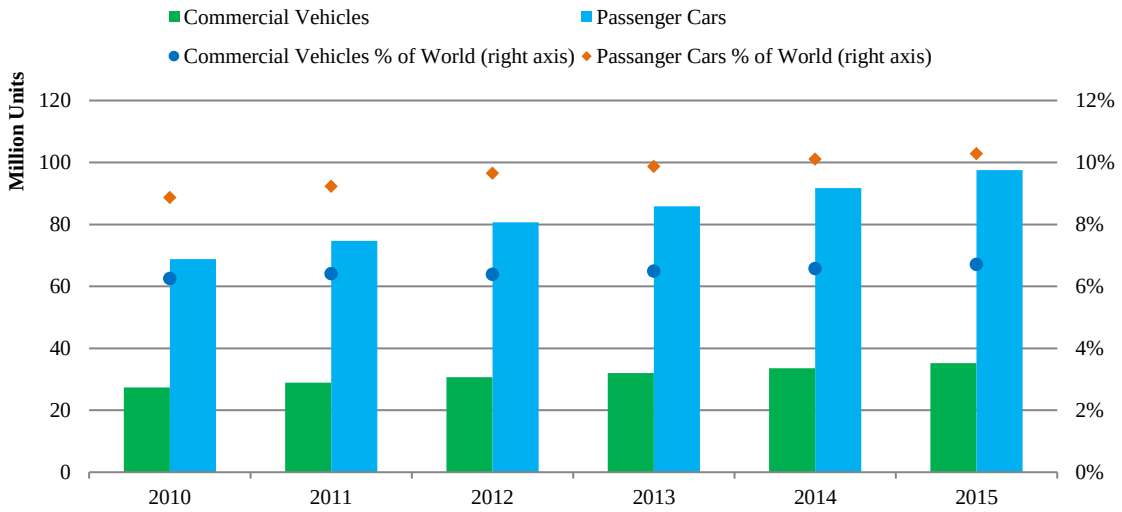

9 INFRASTRUCTURE

Total motor vehicles use in OIC member countries increased between 2010 and 2015. During that period, total passenger cars increased from 68.8 million units to 97.5 million units, which was equal to a growth of around 41.6%. In 2015, OIC member countries accounted for 10.3% of global passenger cars compared to 8.9% in 2010. Meanwhile, commercial vehicles use in OIC has reached to 35.2 million units in 2015, which corresponds to an increase of 28.5%.compared to 27.4 million units, in 2010. Top five OIC member countries with the largest passenger cars in 2015, were Indonesia (13.5 Million units), Iran (12.7 Million units), Malaysia (12.0 Million units), Turkey (10.6 Million units) and Syria (4.6 Million units) (Table 9.9). These countries accounted for 54.8% of the OIC total passenger cars. Meanwhile, OIC member countries with the largest number of commercial vehicles were Indonesia with 9.0 million units, Turkey with 4.8 million units, Syria with 2.3 million units and Saudi Arabia and Iraq each with 2.2 million units (Table 9.8).

OIC countries as a group also witnessed an overall improvement in the total rail lines. During the period 2010-2014, Total length of the rail lines in the OIC member countries increased from 71.2 thousand kilometres in 2010 to 93.5 thousand kilometres in 2014 (Table 9.10). However, the share of the OIC countries in the World total rail lines remained very low amounting to around 9.4% in 2014. During the same period, OIC member countries with the longest rail lines were Kazakhstan, Turkey, Pakistan, Iran and Egypt with 14.8 thousand kilometres, 10.0 thousand kilometres, 9.1 thousand kilometres, 8.6 thousand kilometres and 5.1 thousand kilometres respectively. The increased in the rail lines is parallel with the amount of goods and passengers carried. During 2010, 325.7 billion-tonne of goods were transported compared to 334.5 billion-tonne in 2014 (Table 9.11). Moreover, the passengers transported increased by 16.5%, from 127 billion people in 2010 to 148 billion in 2014 (Table 9.12).

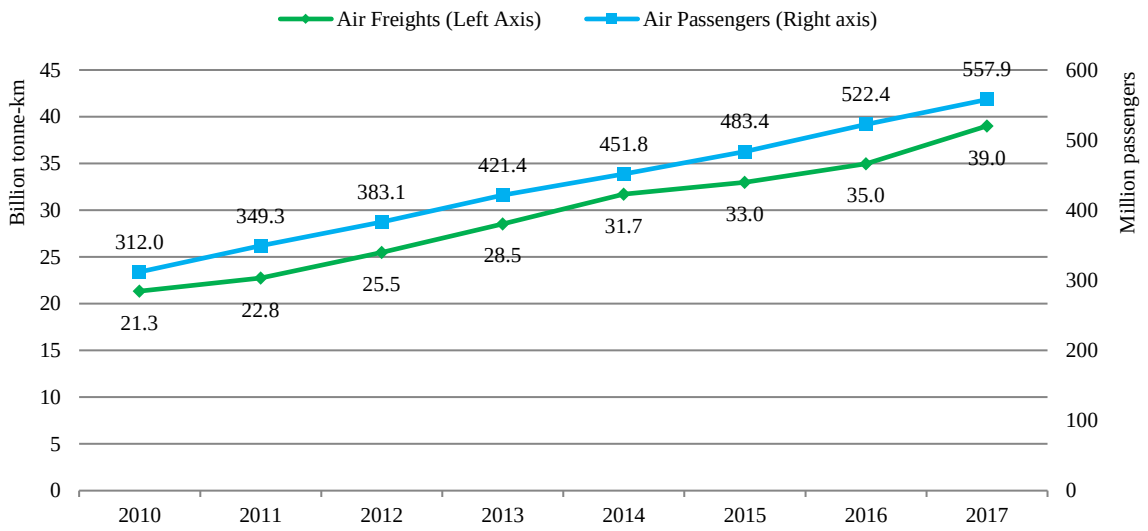

Figure 9.1: Motor Vehicles in Use in OIC Member Countries, 2010-2015

Source: The International Organization of Motor Vehicle Manufacturers (OICA), World Vehicles in Use

Significant progress has been seen in air transportation, both in the numbers of passengers and freight carried between 2010 and 2015. Particularly, the number of air passengers transported in the OIC member countries has increased from 312.0 million in 2010 to 557.9 million in 2017. During this period, the share of the OIC in the World total passengers transported has also increased from 12% to 14%. As of 2017, 87.7% of OIC total air passengers carried were from top ten member countries (Table 9.2). Among them Indonesia, Turkey, UAE, Malaysia and Saudi Arabia were leading countries. Meanwhile, airfreight carried has attained 39 billion tonne-km in 2017, compared to 21.3 billion tonne-km in 2010. The share of the OIC member countries in the World has increased from 12.2% in 2010 to 18.3% in 2017 (Figure 9.2). Only three member countries accounted for more than 80% of the OIC total airfreight (Table 9.1).

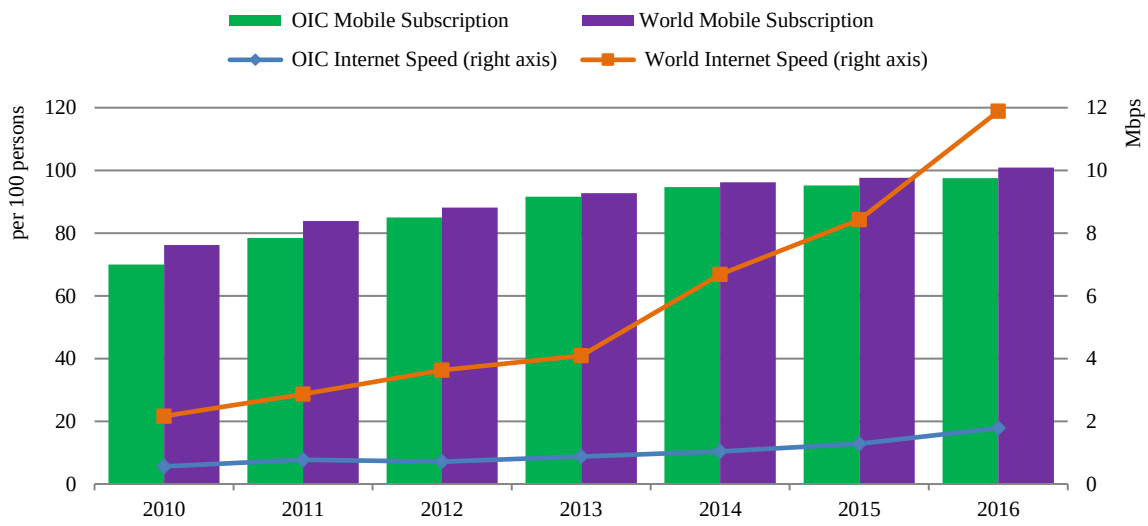

Figure 9.2: Air Transportation in OIC Member Countries, 2010-2017

Source: World Bank, World Development Indicators (WDI)

In terms of the sea transportation, as shown in the Table 9.7, merchant shipping fleets has increased from 51.1 million dead weight tonnes in 2010 to 84.5 million dead weight tonnes in 2018, equivalent to a 65% rise. OIC share in the global merchant fleet has increased from 4.0% to only 4.4%. The communication infrastructure has also improved over the period 2010 to 2016. The mobile subscribers for instance, have shown significant increase in the OIC member countries. In 2016, there were 97.5 mobile subscriptions per 100 persons compared to 70 mobile subscriptions per 100 persons in 2010 (Figure 9.3).

Figure 9.3: Mobile Subscription and Internet Speed (Fixed Broadband) in OIC Member Countries, 2010-2016

Source: International Telecommunication Union (ITU), Yearbook of Statistics and ICT Indicators Database; World Bank, WDI

Internet speed (fixed broadband) in the OIC member countries also followed the similar trend. It has tripled from 0.56 Megabits per second (Mbps) in 2010 to 1.78 Mbps in 2016. However, the growth of internet speed of the World, in average, was much faster. During the period in consideration, the average World internet speed has improved more than 5 times from 2.16 Mbps in 2010 to 11.88 Mbps in 2016 (Figure 9.2.) owing to the progress of some top performing countries.

Table 9.14: Definitions of Infrastructure Indicators

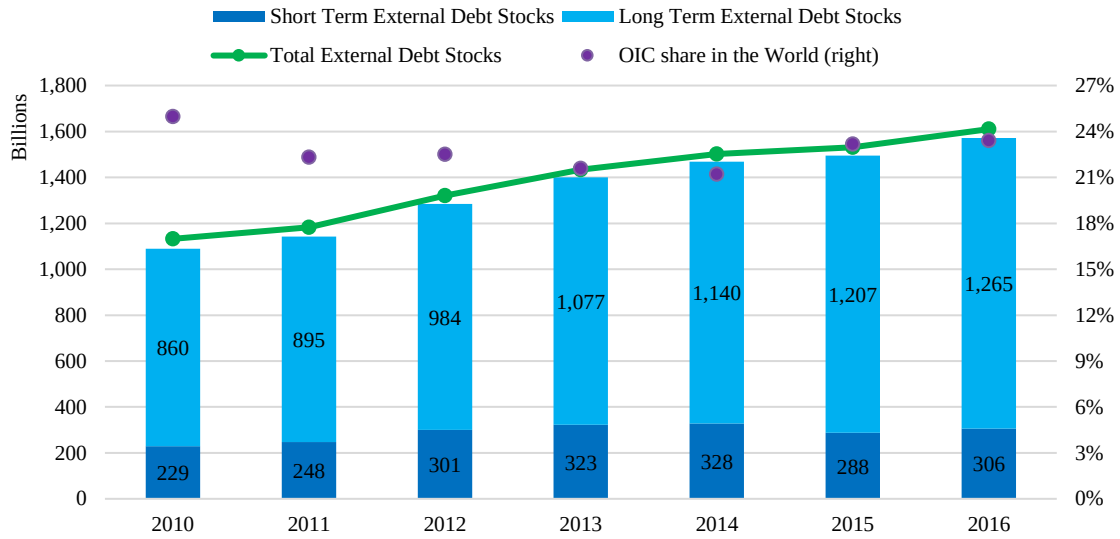

INDICATOR	DEFINITION
Air Transport, Freight	Air freight is the volume of freight, express, and diplomatic bags carried on each flight stage (operation of an aircraft from takeoff to its next landing), measured in metric tons times kilometers traveled.
Air Transport, Passengers Carried	Air passengers carried include both domestic and international aircraft passengers of air carriers registered in the country.
Air Transport, Registered Carrier Departures Worldwide	Registered carrier departures worldwide are domestic takeoffs and takeoffs abroad of air carriers registered in the country.
Cellular Mobile Telephone Subscribers per 100 Persons	Mobile cellular telephone subscribers (post-paid + prepaid) refer to the use of portable telephones subscribing to a public mobile telephone service and provides access to Public Switched Telephone Network (PSTN) using cellular technology.
Internet Bandwidth, International	Total capacity of international Internet bandwidth in megabits per second. If capacity is asymmetric (i.e., more incoming than outgoing), the incoming capacity should be provided.
Internet Speed, Fixed Broadband	Fixed (wired) broadband speed represents the advertised maximum theoretical download speed and not speeds guaranteed to users in megabits per second.
Merchant Shipping: Fleets	All ships, oil tankers and ore and bulk carrier fleets registered in a country.
Motor Vehicles in Use: Commercial Vehicles	Commercial vehicles include light commercial vehicles, heavy trucks, coaches and buses.
Motor Vehicles in Use: Passenger Cars	Passenger cars are motor vehicles with at least four wheels, used for the transport of passengers, and comprising no more than eight seats in addition to the driver's seat.
Rail Lines (Total Route-km)	Rail lines are the length of railway route available for train service, irrespective of the number of parallel tracks.
Railways, Goods Transported	Goods transported by railway are the volume of goods transported by railway, measured in metric tons times kilometres travelled. Net ton-kilometres are freight net ton-kilometres and include both fast and ordinary goods services but exclude service traffic, mail, baggage and non-revenue governmental stores.
Railways, Passengers Carried	Passengers carried by railway are the number of passengers transported by rail times kilometres travelled (i.e. Domestic and international traffic on all railway lines within each country.) Passenger kilometres include all passengers except military, government and railway personnel when carried without revenue.
Revenue, Telecommunication Services	This is the total (gross) telecommunication revenue earned from all (fixed, mobile and data including Internet) operators (both network and virtual operators) offering services within the country. This should exclude revenues from non-telecommunications services. Revenue (turnover) consists of telecommunication service earnings during the financial year under review. This should refer to actual revenues earned by retailers and not from wholesale. Revenue should not include monies received in respect of revenue earned during previous financial years, neither does it include monies received by way of loans from governments, or external investors, nor monies received from repayable subscribers' contributions or deposits. Revenues should be net of royalties. It should exclude revenues generated from traditional broadcasting. This indicator is expressed in US$.

BANK

10 INTERNATIONAL FINANCE

The OIC member countries, as a group, had a gradual expansion of the total external debt stocks over the period between 2010 and 2016, from around 1,132 to 1,610 billion USD. It can be attributed to substantial increase, from 860 billion USD in 2010 to 1,265 billion USD in 2016, around 47%, in the long-term debt stocks what encompasses around 79% of the total stocks of external debt. Besides, short-term debt stocks of OIC member countries has also risen from 229 billion USD to 306 billion USD (Figure 10.1). Meanwhile, total external debt stocks of the World increased even more progressively from 4.5 to 6.9 trillion USD over the period under consideration (Table 10.6). Consequently, share of OIC member countries in the total World external debt stocks declined from around 25% to 23%.

Figure 10.1: External Debt Stocks (2010-2016)

Source: World Bank, World Development Indicators

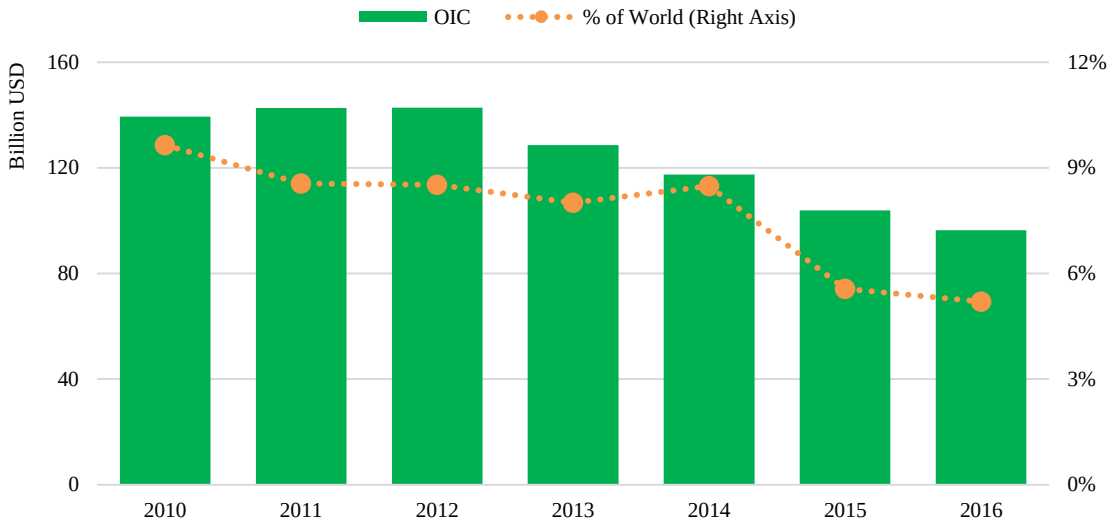

At the individual country level, the external debt of Turkey, 405.7 billion USD, constituted 25.2% of the total external debt stock of the OIC as a group in year 2016. Adding the external debts of Indonesia, 316.4 billion USD and Malaysia 200.4 billion USD, these three countries accounted for 57.3% of the OIC total. Kazakhstan and Pakistan were the other two countries contributing 10.2% and 4.5% to the total with external debt stocks of 163.8 and 72.7 billion USD, respectively.

During the period examined, the FDI flows into the OIC member countries showed a substantial decrease to 96.3 billion USD in 2016 while it was 139.5 billion USD in year 2010. This indicates around 30.9% decrease in FDI inflows. However, steady growth of the FDI has been observed between 2010 and 2012, when it peaked at 142.9 billion USD (Figure 10.2).

As the average FDI of the World as a country group has increased from 1,445 billion USD to 1,851 billion USD over the period under consideration, the share of OIC in the World has declined. In 2010, the OIC member countries received 9.6% of the total FDI of the World. Unfortunately, the capability of the OIC member countries to attract FDI flows from all around the World got worse and the share dropped to 5.2% in the year 2016. Although the trend was stable at around 8.5% between 2011 and 2014 the situation exacerbated afterwards (Figure 10.2).

In the year 2016, FDI flows into the OIC member countries were largely concentrated in a few of them. Only five OIC Member Countries, namely Turkey (12 billion USD), Malaysia (9.9 billion USD), Kazakhstan (9.1 billion USD), UAE (8.9 billion USD) and Egypt (8.1 billion USD) received nearly 50% of the total FDI of the OIC. When FDI flows to Saudi Arabia, Turkmenistan, Azerbaijan, Nigeria and Iran were also included, top 10 OIC member countries would account for 75.1% of the total FDI inflow to OIC.

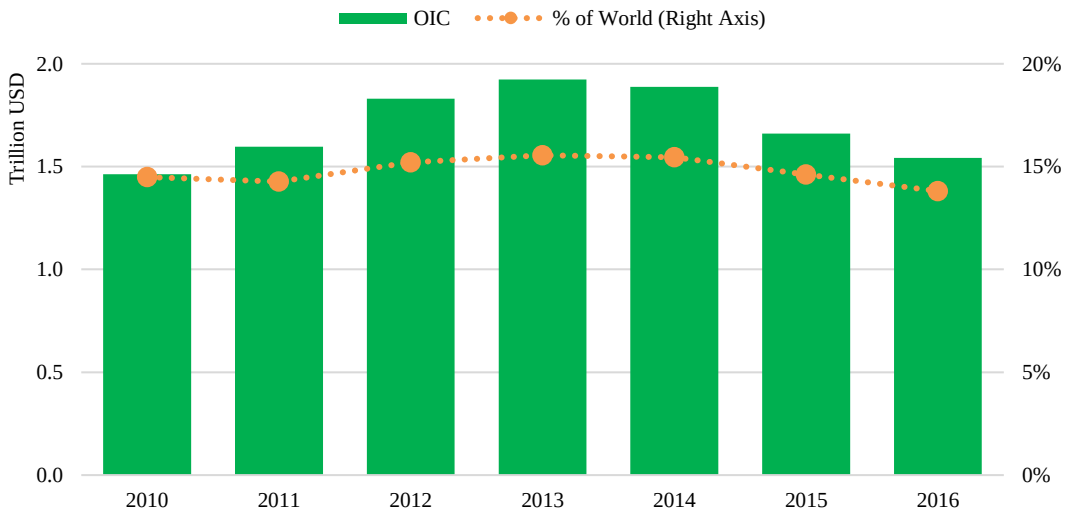

Figure 10.2: Total FDI Flow into the OIC Member Countries, 2010-2016

Source: United Nationa Conference on trade and Development, UNCTADStat Database

During the period under consideration, the Total Reserves Including Gold (TRIG) of the OIC member countries grew from 1,463 billion USD in 2010 to 1,542 billion USD in 2016, corresponding to a 13.8% of the World TRIG. As can be observed from the Figure 10.3, TRIG of OIC had shown an increasing trend until the peak at 1,923 billion USD in year 2013. Afterwards, a gradual decline has been viewed up until 2016. The reserves of 10 OIC member countries constituted 82.6% of the total TRIG of OIC. Among them, having reserves around 547 billion USD, Saudi Arabia, alone, held the 35.5% of the total OIC TRIG. Algeria followed Saudi Arabia by accumulating 121 billion USD worth of reserves, while Indonesia, Turkey and Malaysia had the third, fourth and fifth positions with TRIG around 116 billion USD, 106 billion USD and 94 billion USD respectively.

Table 10.15: Definitions of International Finance Indicators

INDICATOR	DEFINITION
Debt Service Payments	Debt service is the sum of principle repayments and interest actually paid in currency, goods, or services. This series differs from the standard debt to exports series. It covers only long-term public and publicly guaranteed debt and repayments (repurchases and charges) to the IMF. Data for Heavily Indebted Poor Countries (HIPC) are from HIPC Initiative's Status of Implementation Report.
Debt, Private Nonguaranteed	Private nonguaranteed external debt comprises long-term external obligations of private debtors that are not guaranteed for repayment by a public entity. Data are in current U.S. dollars.
Debt, Public and Publicly Guaranteed	Public and publicly guaranteed debt comprises long-term external obligations of public debtors, including the national government, political subdivisions (or an agency of either), and autonomous public bodies, and external obligations of private debtors that are guaranteed for repayment by a public entity. Data are in current U.S. dollars.
External Debt, Long Term	Debt service payments are the sum of principal repayments and interest payments actually made in the year specified. Long-term external debt is defined as debt that has an original or extended maturity of more than one year and that is owed to non-residents by residents of an economy and repayable in currency, goods, or services. Data are in current U.S. dollars.
External Debt, Short Term	Short-term external debt is defined as debt that has an original maturity of one year or less. Available data permit no distinction between public and private nonguaranteed short-term debt. Data are in current U.S. dollars.
External Debt, Total	Total external debt is debt owed to non-residents repayable in currency, goods, or services. Total external debt is the sum of public, publicly guaranteed, and private nonguaranteed long-term debt, use of IMF credit, and short-term debt. Short-term debt includes all debt having an original maturity of one year or less and interest in arrears on long-term debt. Data are in current U.S. dollars.
Foreign Direct Investment, Inward Flow	Foreign direct investment is net inflows of investment to acquire a lasting management interest (10 percent or more of voting stock) in an enterprise operating in an economy other than that of the investor. The components of FDI are equity capital, reinvested earnings and other capital (mainly intra-company loans). As countries do not always collect data for each of those components, there is an apparent lack of comparability of FDI data reported by different countries. Moreover, for a given transaction, host country and home country often do not register it in exactly the same way. In particular, data on reinvested earnings, the collection of which depends on company surveys, are often unreported by many countries.
ODA per Capita	Net official development assistance (ODA) per capita consists of disbursements of loans made on concessional terms (net of repayments of principal) and grants by official agencies of the members of the Development Assistance Committee (DAC), by multilateral institutions, and by non-DAC countries to promote economic development and welfare in countries and territories in the DAC list of ODA recipients; and is calculated by dividing net ODA received by the midyear population estimate. It includes loans with a grant element of at least 25 percent (calculated at a rate of discount of 10 percent).

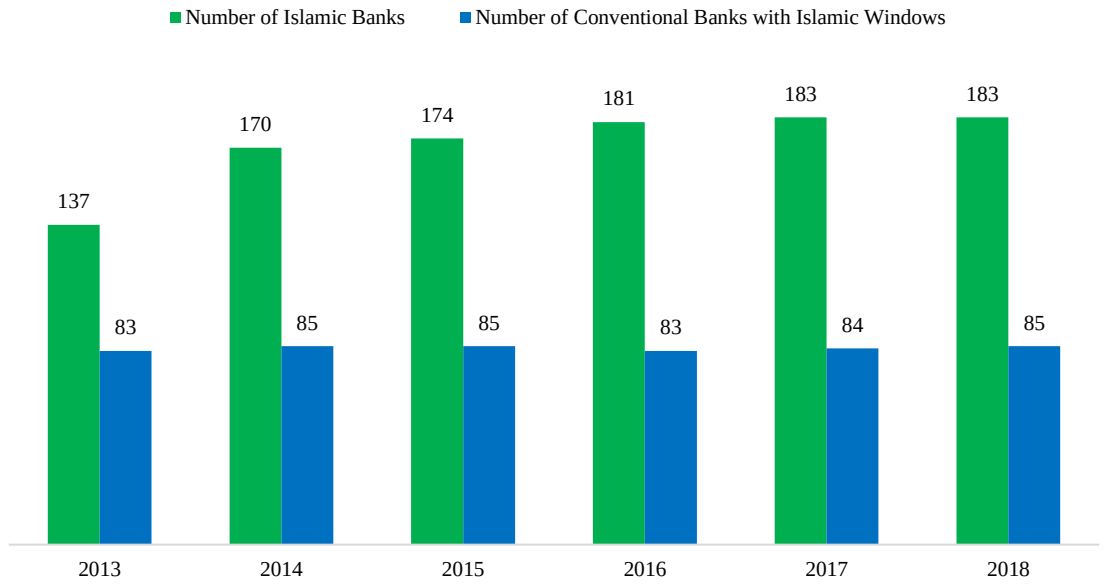

INDICATOR	DEFINITION
Official Development Assistance	Official development assistance (ODA) consists of net disbursements of loans made on concessional terms (i.e with a grant element of at least 25 %) and grants by official agencies of the members of the Development Assistance Committee (DAC) and by multilateral institutions. The promotion of the economic development and welfare of developing countries should be the main objective of ODA. In addition to financial flows, technical cooperation is included in aid. Grants, loans and credits for military purposes and lending by export credit agencies - with the purpose of export promotion - are excluded.
Rate of Exchange: End of Period	Exchange rate is the price of one currency in terms of another. If available, the rate at market prices is given. Otherwise, it is the official or principal rate. It is expressed in national currency per USD.
Rate of Exchange: Period Average	Official exchange rate refers to the exchange rate determined by national authorities or to the rate determined in the legally sanctioned exchange market. It is calculated as an annual average based on monthly averages . If official rate is not available, the period average of market rate is given. It is expressed in national currency per USD.
Total Reserves, Excluding Gold	Total reserves minus gold comprise special drawing rights, reserves of IMF members held by the IMF, and holdings of foreign exchange under the control of monetary authorities. Gold holdings are excluded. Data are in current U.S. dollars.
Total Reserves, Including Gold	Total reserves comprise holdings of monetary gold, special drawing rights, reserves of IMF members held by the IMF, and holdings of foreign exchange under the control of monetary authorities. The gold component of these reserves is valued at year-end (December 31) London prices. Data are in current U.S. dollars.
Use of IMF Credit	Use of IMF Credit: Data related to the operations of the IMF are provided by the IMF Treasurer's Department. They are converted from special drawing rights into dollars using end-of-period exchange rates for stocks and average-over-the-period exchange rates for flows. IMF trust fund operations under the Enhanced Structural Adjustment Facility, Extended Fund Facility, Poverty Reduction and Growth Facility, and Structural Adjustment Facility (Enhanced Structural Adjustment Facility in 1999) are presented together with all of the IMF's special facilities (buffer stock, supplemental reserve, compensatory and contingency facilities, oil facilities, and other facilities). SDR allocations are also included in this category. According to the BPM6, SDR allocations are recorded as the incurrence of a debt liability of the member receiving them (because of a requirement to repay the allocation in certain circumstances, and also because interest accrues). This debt item is introduced for the first time this year with historical data starting in 1999.

11 ISLAMIC BANKING AND FINANCE

Islamic banks together with other sharia compliant financial institutions have become more popular in the last decade. Number of Islamic banks increased by 33.6% from 137 in 2013 to 183 in 2018, for 19 OIC member countries (Figure 11.1). Top five countries with the highest number of Islamic banks as of 2018 are Sudan (37), Iran (34), Bahrain (23), Malaysia (16) and Indonesia (13) (Table 11.7). Meanwhile, number of conventional banks with Islamic windows only increased from 83 to 85 over the same period. These numbers account for only seven OIC member countries, namely; Indonesia (21), Pakistan (16), Bangladesh (15), Malaysia (12), Saudi Arabia (8), Afghanistan (7) and Oman (6) with available data regarding the number of Islamic banking windows (Table 11.2)

Figure 11.1: Islamic Banks and Islamic Banking Windows of OIC Member Countries, 2013-2018

Source: Islamic Financial Services Board

Significant improvements have been observed in the performance of these banks in terms of installing new ATM Machines between 2013 and 2016. The number of ATMs in OIC countries member countries increased by around 450%, from 14,006 to 76,920 during this period. At the individual country level, top five countries with the highest number of ATMs were Iran (59,130), Saudi Arabia (7,767), Indonesia (2,350), Turkey (1,754) and Sudan (1,355) (Table 11.1).

The number of domestic branch offices of Islamic banks and domestic branch offices of Islamic banking windows also demonstrated substantial growth figures. There has been 375% increase from 7,226 in 2013 to 34,340 in 2018 in the number of domestic branch offices of Islamic banks. Meanwhile, domestic branch offices of Islamic banking windows has grown by 503%, from 3,719 to 22,438 during the same period (Table 11.3 and Table 11.4). Naturally, together with the increase in the number of branches these banks have hired new personnel. The number of employees of Islamic banks increased by 209%, from 122,628 in 2013 to 378,827 in 2018. At the individual country level, top five countries with the highest numbers of employees are Iran (222,397), Indonesia (50,095), Bangladesh (30,421) Saudi Arabia (20,460), and Pakistan (16,878) (Table 11.6). However, Number of employees of conventional banks with Islamic windows slightly decreased by 6% from 131,131 in 2013 to 122,737 in 2017. These numbers came from only 7 OIC member countries; Malaysia (109,589), Pakistan (7,260), Indonesia (4,502), Oman (667), Bangladesh (585) and Afghanistan (134) that keep a record of the data conventional banks with Islamic banking windows (Table 11.5).

Table 11.8: Definitions of Islamic Banking and Finance Indicators

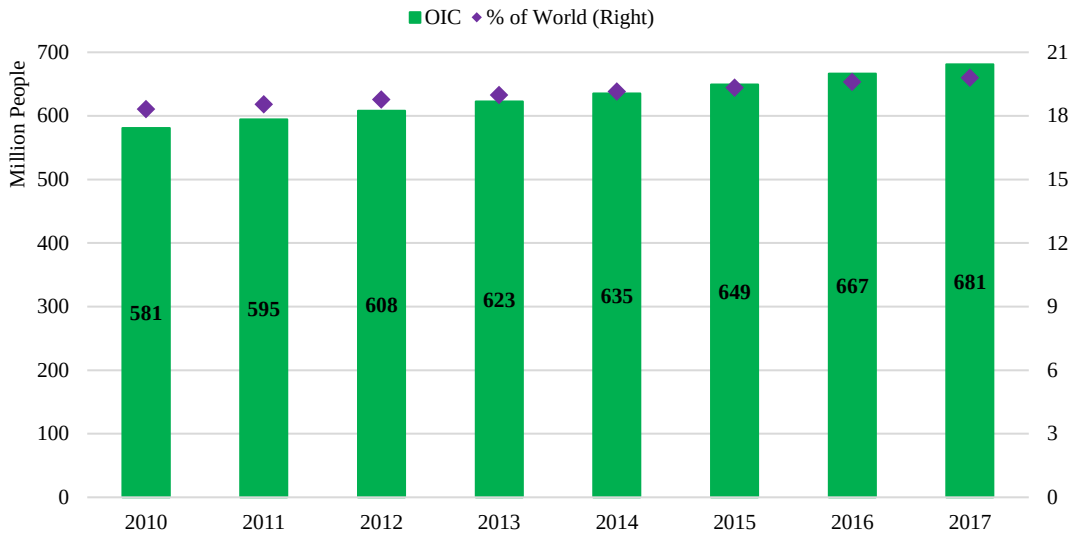

INDICATOR	DEFINITION
Number of ATMs	The number of automatic teller machines that receive or dispense cash and permit the public to carry out various banking transactions.
Number of Conventional Banks with Islamic Windows	Total number of conventional banks operating Islamic windows (Islamic banking branches or Islamic windows). In some countries, Islamic windows are an important component of total Islamic financial activity.
Number of Domestic Branch Offices (Islamic Banking Windows)	Total number of separate branches, offices, and locations of Islamic banking branches or Islamic windows operated by conventional banks. This is a measure of access of the population to Islamic financial facilities.
Number of Domestic Branch Offices (Islamic Banks)	This is a measure of the access of the public to Islamic banking facilities.
Number of Employees (Islamic Banking Windows)	Number of full-time employees equivalent of Islamic banking branches and Islamic Windows banking and near banking Islamic Finance Institutions, by domestic and foreign control.
Number of Employees (Islamic Banks)	Number of full-time employees equivalent of banking and near banking Islamic Finance Institutions, by domestic and foreign control.
Number of Islamic Banks	Total number of banking and near banking Islamic Finance Institutions. This is a measure of the size of the Islamic banking industry.

12 LABOUR AND SOCIAL PROTECTION

Labour force is an active population or population within the age range of 15 to 64. The total labour force of the OIC member countries increased by 17.2% between 2010 and 2017 amounting to around 681 million people. This increase is more than the percentage increase in total population, which is 14.8% for the same period. Meanwhile, global labour force has increased by 8.4%, from 3,171 million to 3,439 million people (Table 12.13). As the intensity of the growth of the labour force was higher across the OIC on average compared to the rest of the World, the share of the OIC labour force in the World has also increased from 18.3% to 19.8% over the same period (Figure 12.1).

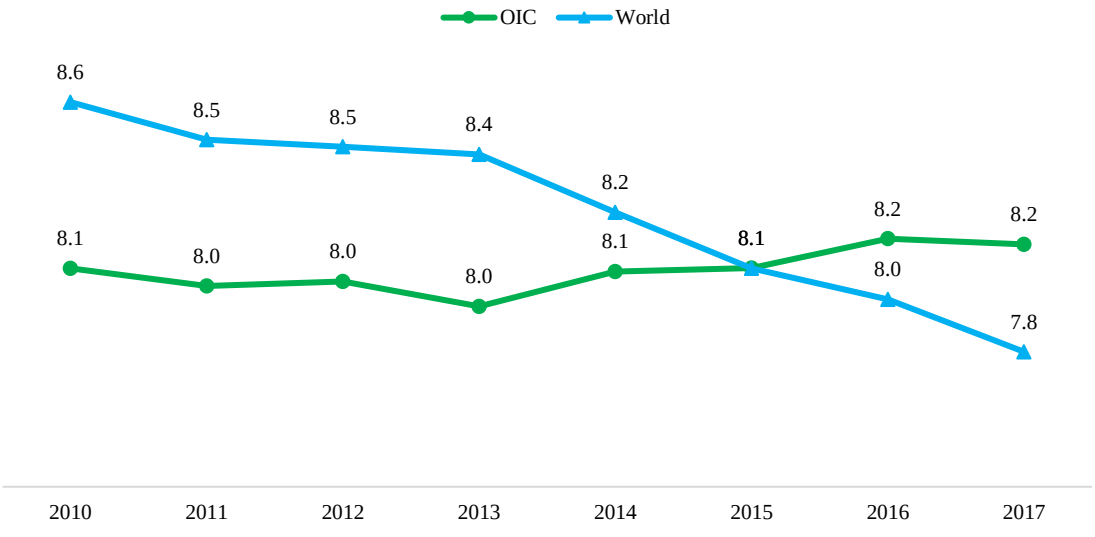

Figure 12.1: Total Labour Force, 2010-2017

Source: World Bank, World Development Indicators

At the individual country level, from 2010 to 2017, Oman had stunningly the highest increase of around 82% in the labour force. Oman was followed by, Qatar, Lebanon, Palestine, Afghanistan, Saudi Arabia and Kuwait, all with the above 40% growth in the number of labour forces. On the other end of the story, Syria experienced 17% decrease in the labour force. Besides, Libya had only around 1% rise in the labour force of the country (Table 12.13).

Figure 12.2: Unemployment Rate, % of Total Labour Forces, 2010-2017

Source: World Bank, World Develpment Indicators

Unemployment rate represents the share of the unemployed population, who eligible to work and actively searching for a job, in the total labour force. Generally, unemployment rate is negatively correlated with the economic growth. In other words, unemployment rises associated with economic slowdown. For the year 2010, unemployment rates for the total population between the ages 15-64 was on average 8.1% in OIC member countries. There has been only a small change in the unemployment rates until 2017 with an increase to 8.2%. In contrast, global unemployment rate demonstrated a significant drop off. It plunged from as high as 8.6% level in 2010 to 7.8% in 2017.

At the individual country level, Palestine and Mozambique are two OIC countries with the most noticeable employment issues where more than a quarter of the working age population were unemployed in 2017. In addition to Palestine and Mozambique, across the 16 OIC member countries unemployment rate has been higher than 10%. In contrast, unemployment rate in Qatar and Niger has been below 1 percent in the same year. Furthermore, 29 OIC member countries achieved a reduction in their unemployment rates over the period examined (Table 12.17).

Age dependency ratio is the ratio of the typically dependent population of the ages between 0 and 14 and senior people over 65 to the productive population or typically working age population aged between 15 to 64 years. This indicator embodies the level of burden on the shoulders of economically active population. Because of the increasing dependency ratio, government policies might target higher tax rates on the income of population or reduction of the social services. Dependency ratio declined from 64% in 2010 to 62.3% in 2017 in OIC. Although, dependency ratio in the World was lower compared to the OIC, it has been increasing thus narrowing the gap between the dependency ratios of two groups (Figure 12.3).

On average OIC countries as a group has young population structure. Thus, decline in the dependency ratio can be explained by growing number of young population who have been joining the group of working age population over the years. In contrast, across the rest of the World, particularly in the developed countries, due to the aging population and low fertility rates over the prior decades, dependency ratio has been rising.

At the individual country level, across the 13 OIC member countries, namely, Kazakhstan, Algeria, Kyrgyzstan, Egypt, Turkmenistan, Syria, Tunisia, Iran, Qatar, Niger, UAE and Azerbaijan the age dependency ratio has increased between 2010 and 2017. In contrast, the sharpest decline in dependency ratio happened in Afghanistan by 16%-points, from 100.4% to 84.6% during the period examined. Afghanistan was followed by Saudi Arabia with almost 9% decline and Djibouti with 8.0% decline (Table 12.1).

Table 12.18: Definitions of Labour and Social Protection

INDICATOR	DEFINITION
Dependency Ratio, Total, % of Working Age Population	The ratio of total dependents (i.e. people younger than 15 or older than 64) to the working-age population (i.e. those ages 15-64). Data are shown as the proportion of dependents per 100 working-age population. For example, 0.7 means there are 7 dependents for every 10 working-age people.
Employment in Agriculture, % of Total Employment	Employees are people who work for a public or private employer and receive remuneration in wages, salary, commission, tips, piece rates, or pay in kind. Agriculture corresponds to division 1 (ISIC revision 2) or tabulation categories A and B (ISIC revision 3) and includes hunting, forestry, and fishing.
Employment in Industry, % of Total Employment	Employees are people who work for a public or private employer and receive remuneration in wages, salary, commission, tips, piece rates, or pay in kind. Industry corresponds to divisions 2-5 (ISIC revision 2) or tabulation categories C-F (ISIC revision 3) and includes mining and quarrying (including oil production), manufacturing, construction, and public utilities (electricity, gas, and water).
Employment in Services, % of Total Employment	Employees are people who work for a public or private employer and receive remuneration in wages, salary, commission, tips, piece rates, or pay in kind. Services correspond to divisions 6-9 (ISIC revision 2) or tabulation categories G-P (ISIC revision 3) and include wholesale and retail trade and restaurants and hotels; transport, storage, and communications; financing, insurance, real estate, and business services; and community, social, and personal services.
Employment to Population Ratio, Ages 15+, Female (%)	Employment to population ratio is the proportion of a country's population that is employed. Ages 15 and older are generally considered the working-age population.
Employment to Population Ratio, Ages 15+, Male (%)	Employment to population ratio is the proportion of a country's population that is employed. Ages 15 and older are generally considered the working-age population.
Employment to Population Ratio, Ages 15+, Total (%)	Employment to population ratio is the proportion of a country's population that is employed. Ages 15 and older are generally considered the working-age population.
Employment to Population Ratio, Ages 15-24, Female (%)	Employment to population ratio is the proportion of a country's population that is employed. Ages 15–24 are generally considered the youth population.
Employment to Population Ratio, Ages 15-24, Male (%)	Employment to population ratio is the proportion of a country's population that is employed. Ages 15–24 are generally considered the youth population.
Employment to Population Ratio, Ages 15-24, Total (%)	Employment to population ratio is the proportion of a country's population that is employed. Ages 15–24 are generally considered the youth population.
GDP per Person Employed (Constant 2011 PPP USD)	GDP per person employed is gross domestic product (GDP) divided by total employment in the economy. Purchasing power parity (PPP) GDP is GDP converted to 2011 constant international dollars using PPP rates. An international dollar has the same purchasing power over GDP that a U.S. dollar has in the United States.

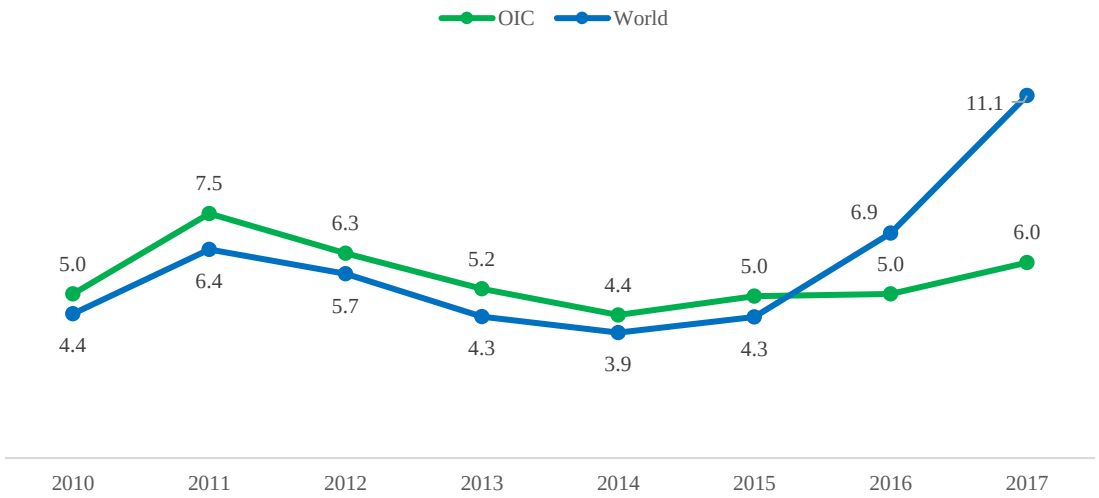

INDICATOR	DEFINITION
Labour Force, Female, % of Total Labour Force	Female labour force as a percentage of the total show the extent to which women are active in the labour force. Labour force comprises all people who meet the International Labour Organization's definition of the economically active population.
Labour Force, Total	Total labour force comprises people ages 15 and older who meet the International Labour Organization definition of the economically active population: all people who supply labour for the production of goods and services during a specified period. It includes both the employed and the unemployed. While national practices vary in the treatment of such groups as the armed forces and seasonal or part-time workers, in general the labour force includes the armed forces, the unemployed, and first-time job-seekers, but excludes homemakers and other unpaid caregivers and workers in the informal sector.
Labour Participation Rate, Female (% of Female Population Ages 15+)	The proportion of the female population ages 15 and older that is economically active: all people who supply labour for the production of goods and services during a specified period.
Labour Participation Rate, Male (% of Male Population Ages 15+)	The proportion of the male population ages 15 and older that is economically active: all people who supply labour for the production of goods and services during a specified period.
Labour Participation Rate, Total (% of Total Population Ages 15+)	The proportion of the total population ages 15 and older that is economically active: all people who supply labour for the production of goods and services during a specified period.
Unemployment Rate, % of Total Labour Force	Unemployment refers to the share of the labour force that is without work but available for and seeking employment. Definitions of labour force and unemployment differ by country.

epsos.de

13 MONEY AND PRICES

Consumer Prices Index measures the changes in the prices of the basket of standard consumer goods and services. On average, annual change of the consumer prices of OIC member countries increased from 5% to 6% between 2010 and 2016. Meanwhile, annual change of global consumer prices index substantially rose from 4.4% to 11.1% on average over the same period. As of 2017, 10 OIC member countries had double digit change in average consumer prices, namely Sudan (32.4%), Libya (28.0%), Egypt (23.5%), Suriname (22.0%), Sierra Leone (18.0%), Nigeria (16.5%), Mozambique (15.3%), Azerbaijan (13.0%), and Uzbekistan (12.6%). In contrast, negative change in average consumer prices was observed in Chad, Saudi Arabia, Togo, and Brunei (Figure 13.1).

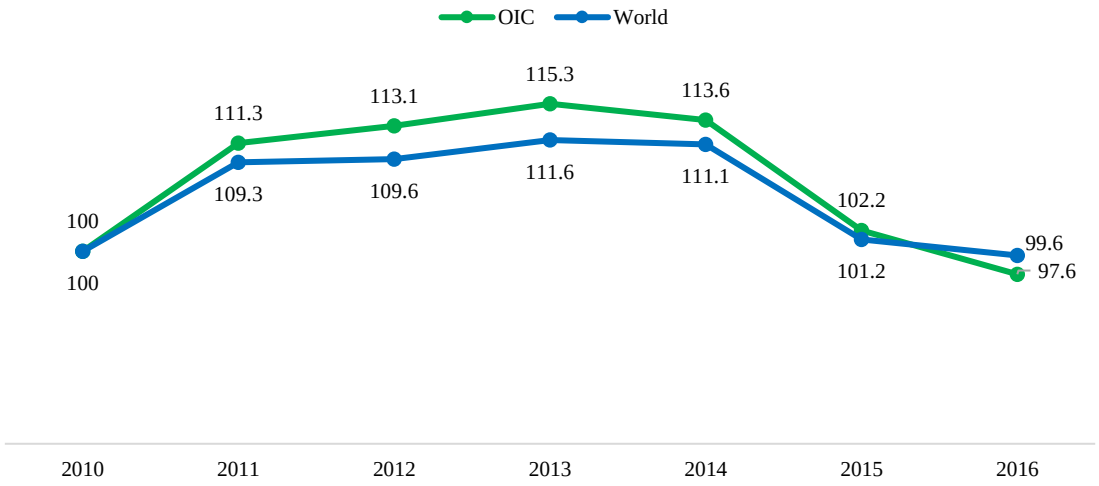

Figure 13.1: Inflation Consumer Prices (% Change Annual), 2010-2017

Source: United Nations National Accounts Main Aggregates Database

The GDP Deflator is another common measure for the price inflation. Over the period between 2010 and 2016, with 2010 taken as a base year, OIC countries on average experienced a slight decline to 97.6. Meanwhile, global GDP deflator decreased to 99.6. During the whole period under consideration, GDP deflator value of the OIC has been above the World average, except in 2016 (Figure 13.2).

Table 13.8: Definitions of Money and Prices Indicators

INDICATOR	DEFINITION
Consumer Price Index	An indicator of inflation that reflects changes in the cost of acquiring a fixed basket of goods and services by the average consumer.
Consumer Prices, Annual % Change	An indicator of inflation that reflects changes in the cost of acquiring a fixed basket of goods and services by the average consumer expressed as the average percentage change over the previous year.
Discount Rate	The rate at which the central banks lend or discount eligible paper for deposit money banks, typically shown on an end-of-period basis.
GDP Deflator (2005=100)	GDP deflator is the implicit price deflator for GDP of which the movements in an implicit price deflator reflect both changes in price and changes in the composition of the aggregate for which the deflator is calculated. Here, the GDP implicit deflator is calculated as the ratio of GDP in current NCU to GDP in constant NCU (chain value measure).
GDP Deflator (2005=100)	GDP deflator is the implicit price deflator for GDP of which the movements in an implicit price deflator reflect both changes in price and changes in the composition of the aggregate for which the deflator is calculated. Here, the GDP implicit deflator is calculated as the ratio of GDP in current US dollars to GDP in constant US dollars (chain value measure).
Money Supply: M1	Money is the sum of currency outside banks and demand deposits other than those of central government. This series, frequently referred to as M1 is a narrower definition of money than M2.
Money Supply: M1 plus Quasi-money	Money and quasi money comprise the sum of currency outside banks, demand deposits other than those of the central government, and the time, savings, and foreign currency deposits of resident sectors other than the central government. This definition of money supply is frequently called M2.
Wholesale Price Index (2010=100)	Wholesale price index refers to a mix of agricultural and industrial goods at various stages of production and distribution, including import duties. The Laspeyres formula is generally used.

P 2 G

Overall, economic structure of the OIC member countries slightly changed between 2010 and 2016. In terms of the shares of sectors within the economy, manufacturing and utilities was the dominant sector with 35.1% of the share in the total value added in 2010, which slightly fall to 28.2% in 2016. Thanks to extensive economic diversification policies in many OIC member countries, the highest growth has been observed in value added to economy by other sectors together. It reached to 29.5%, corresponding to a 4.1 percentage points increase compared to 2010. When we further examine the sectoral decomposition of the economy, apart from mining, manufacturing and utilities only the share of the agriculture sector dropped from 10.7% in 2010 to 10.5% in 2016. Over the same period, contributions of the remaining sectors increased, particularly, Wholesale, Retail Trade, Restaurants and Hotels from 13.5% to 14.9%, Transportation; Storage and Communications from 8.9% to 9.6%; and lastly, Construction from 6.4% to 7.2% (Figure 14.1).

Figure 14.1: Decomposition of the Total Value Added by Economic Sectors in OIC Member Countries, 2010 vs. 2016

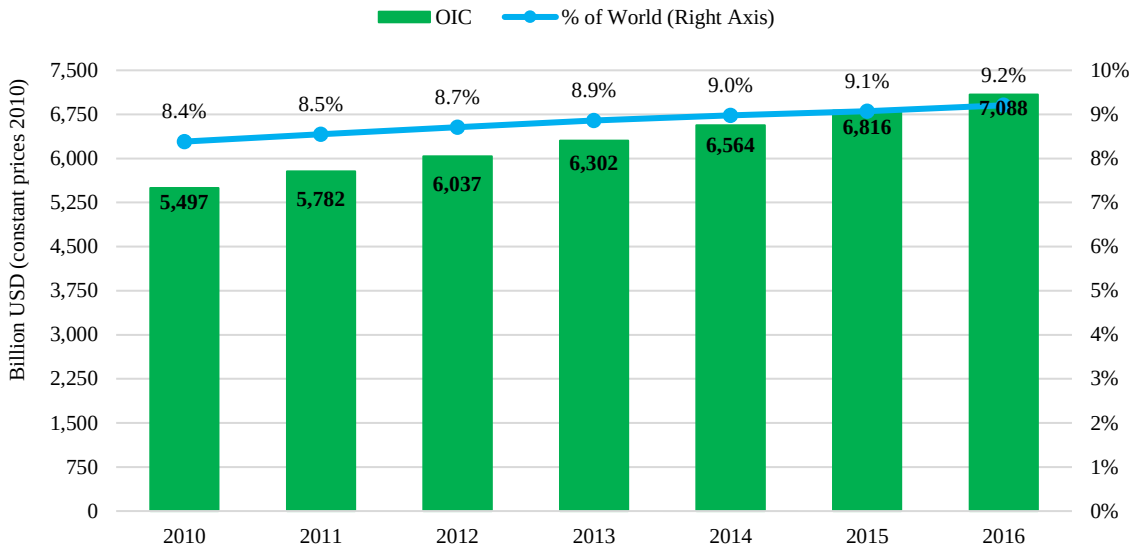

Source: UNSTAT, National Accounts Main Aggregates Database

Agriculture sector in developed countries constitute tiny part of the economy while it is opposite for underdeveloped countries. Among the OIC member countries, all top ten countries that most heavily dependent on agriculture sector were from the sub-Saharan Africa region. In particular, the highest share of the agriculture sector in the economy was observed in Somalia (60.2%) and Sierra Leone (59.9%). They were followed by Guinea-Bissau (44.2%), Comoros (42.0%), Niger (41.1%), Mali (39.8%), Sudan (31.7%), Burkina Faso (30.3%), Togo (28.7%) and Chad (27.5%) (Table 14.1).

In contrast, service sector signifies the importance of the private businesses, particularly, small and medium scale entrepreneurship. An important component of the service sector, Wholesale, Retail Trade, Restaurants and Hotels was the largest contributor to economy in Maldives, where it comprised 32.9% of the total value added. Next comes Gambia (28.7%), Palestine (22.5%), Syria (22.5%) and Kyrgyzstan (22.3%) (Table 14.18). Transport, Storage and Communication sector were significant contributing sector of the economy in Djibouti (28.4%), Afghanistan (25.2%), Gambia (16.3%), Suriname (15.1%) and Maldives (14.5%) (Table 14.17).

The GDP of the OIC member countries had been continuously growing since 2010. In terms of constant prices at 2010 level, the total GDP of the OIC member countries reached 7,088 billion USD in 2016, 28.9% increase compared to 2010. The upward trend of the GDP of the OIC member countries continued during the whole period under consideration. In terms of OIC member countries share in the global GDP, it reached to 9.2% in 2016 while it was only 8.4% in 2010 (Figure 14.2).

Figure 14.2: GDP (Constant Prices 2010 in USD), 2010-2016

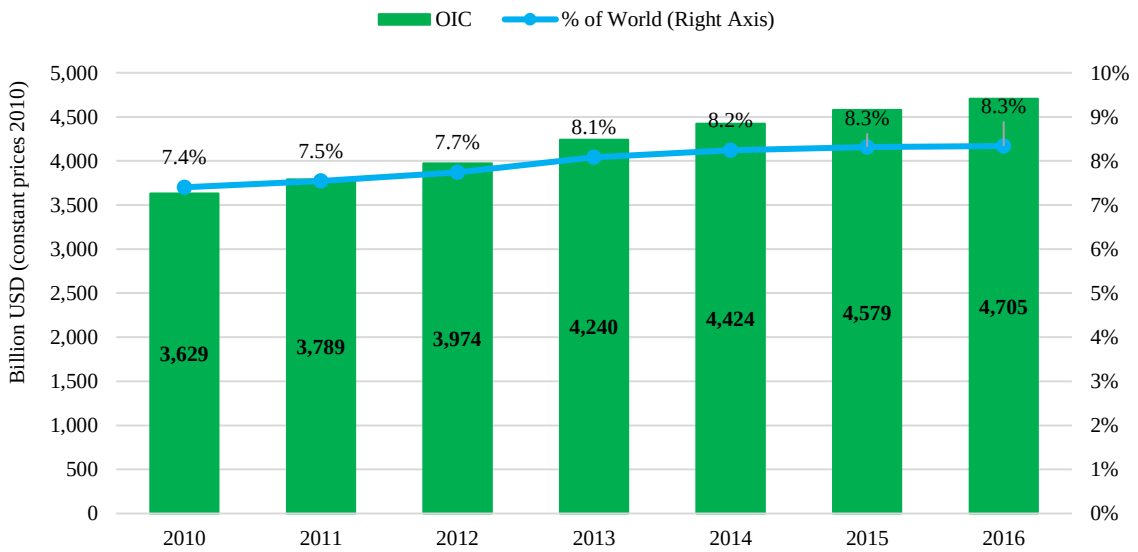

Source: UNSTAT, National Accounts Main Aggregates Database

At the individual country level, Turkey took the lead with a total GDP of 1,122 billion USD or 15.8% of the total GDP of the OIC, in 2016. Turkey was followed by Indonesia with a GDP of 1,037 billion USD. Among the top ten OIC member countries, were also Saudi Arabia, Iran, Nigeria, UAE, Malaysia, Egypt, Pakistan and Iraq with GDPs of over 200 billion USD. These 10 countries together account for 74.3% of the total GDP of OIC in the same year (Table 14.3).

Total consumption at constant prices shows the same continuous upward trend as GDP. In 2010, the total consumption of the OIC member countries was 3,629 billion USD. This figure with annual average real growth rate of 4.4% reached 4,705 billion USD in 2016. The highest real growth rate of total consumption was recorded in 2013, which was 6.7%. Contributions of OIC member countries to the global consumption also increased from 7.4% to 8.3% over the period observed (Figure 14.3).

Table 14.19: Definitions of National Accounts Indicators

INDICATOR	DEFINITION
Agriculture, Share in GDP	Agriculture, hunting, forestry and fishing is an aggregation of economic activities of Section A Agriculture, hunting and forestry and Section B Fishing (see ISIC Rev 3.1). Expressed as a share in GDP.
Construction, Share in GDP	Construction represents the economic activities of Section F Construction (see ISIC Rev 3.1). Expressed as a share in GDP.
GDP (Constant 2010 Prices)	Gross domestic product (GDP) at constant prices refers to the volume level of GDP. Constant price estimates of GDP are obtained by expressing values in terms of a base period. In theory, the price and quantity components of a value are identified and the price in the base period is substituted for that in the current period. Two main methods are adopted in practice. The first, referred to as "quantity revaluation", is based on a methodology consistent with the above theory (i.e., by multiplying the current period quantity by the base period price). The second, commonly referred to as "price deflation", involves dividing price indexes into the observed values to obtain the volume estimate. The price indexes used are built up from the prices of the major items contributing to each value. Expressed in USD.
GDP per capita (Current Prices)	GDP per head calculated as the aggregate of production (GDP) divided by the population size.
General Government Final Consumption Expenditures (Constant 2010 Prices)	Government final consumption expenditure consists of expenditure, including imputed expenditure, incurred by general government on both individual consumption goods and services and collective consumption services. Expressed in Constant Prices in USD.
General Government Final Consumption Expenditures (Current Prices)	Government final consumption expenditure consists of expenditure, including imputed expenditure, incurred by general government on both individual consumption goods and services and collective consumption services. Expressed in Current Prices in USD.
GNI per Capita (Current Prices)	GNI per head calculated as the aggregate of production (GNI) divided by the population size.
Gross Capital Formation (Constant 2010 Prices)	Gross fixed capital formation is measured by the total value of a producer's acquisitions, less disposals, of fixed assets during the accounting period plus certain additions to the value of non- produced assets (such as subsoil assets or major improvements in the quantity, quality or productivity of land) realised by the productive activity of institutional units. Expressed in Constant Prices in USD.
Gross Capital Formation (Current Prices)	Gross fixed capital formation is measured by the total value of a producer's acquisitions, less disposals, of fixed assets during the accounting period plus certain additions to the value of non- produced assets (such as subsoil assets or major improvements in the quantity, quality or productivity of land) realised by the productive activity of institutional units. Expressed in Current Prices in USD.
Gross Domestic Savings, % of GDP	Share in GDP of (Gross Domestic Product - Total Expenditures).
Household Consumption (Constant 2010 Prices)	Household final consumption expenditure consists of the expenditure, including imputed expenditure, incurred by resident households on individual consumption goods and services, including those sold at prices that are not economically significant. Expressed in Constant Prices in USD.

INDICATOR	DEFINITION
Household Consumption (Current Prices)	Household final consumption expenditure consists of the expenditure, including imputed expenditure, incurred by resident households on individual consumption goods and services, including those sold at prices that are not economically significant. Expressed in Current Prices in USD.
Industry, Share in GDP	Mining, manufacturing and utilities is an aggregation of economic activities of Section C Mining and quarrying, Section D Manufacturing and Section E Electricity, gas and water supply (see ISIC Rev 3.1). Expressed as share in GDP.
Manufacturing, Share in GDP	Manufacturing represents the economic activities of section D Manufacturing (see ISIC Rev 3.1). Expressed as share in GDP.
Other Activities, Share in GDP	Other activities constitute the aggregation of economic activities of Section J Financial intermediation, Section K Real estate, renting and business activities, Section L Public administration and defense, compulsory social security, Section M Education, Section N Health and social work, Section O Other community, social and personal service activities and Section P Activities of private households as employers and undifferentiated production activities of private households (see ISIC Rev 3.1). Expressed as share in GDP.
Total Consumption (Constant 2010 Prices)	Final consumption expenditure consists of household final consumption expenditure, government final consumption expenditure and final consumption expenditure of NPISH's. Expressed in Constant Prices in USD.
Transport, Storage and Communication, Share in GDP	Transport, storage and communication represents the economic activities of Section I Transport, storage and communication (see ISIC Rev 3.1). Expressed as share in GDP
Wholesale, Retail Trade, Restaurants and Hotels, Share in GDP	Wholesale, retail trade, restaurants and hotels is an aggregation of economic activities of Section G Wholesale and retail trade; repair of motor vehicles, motorcycles and personal and household goods and Section H Hotels and restaurants (see ISIC Rev 3.1). Expressed as a share of GDP

15 PUBLIC FINANCE

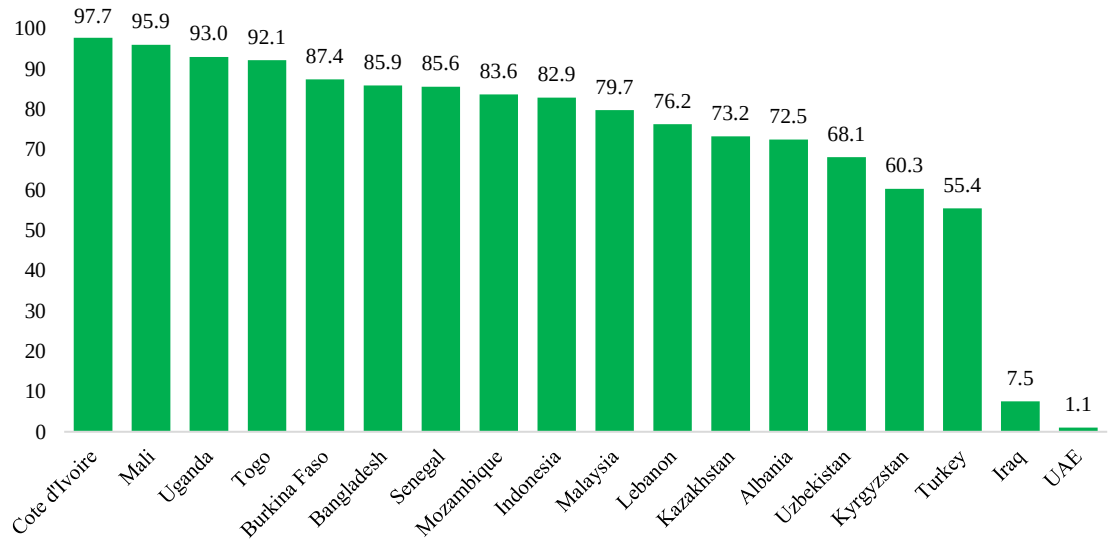

Government expenditures share in GDP generally shows the size of the government. However, even when governments have spent similar amount of resources to deliver social protection and different public goods and services, there may be differences in their government expenditures that would demonstrate the variety of strategies implemented. Across the OIC member countries, Turkey took a lead where government expenditures were almost as large as one-third (32.7%) of the country's GDP, in 2016. Kyrgyzstan (28.1%), Iraq (27.7%), Lebanon (26.2%) and Senegal (25.1%) followed Turkey (Figure 15.1 Left). Share of the government revenues in GDP closely resembled the government expenditures share in GDP, in 2016. Top five OIC member countries were Turkey (33.1%), Kyrgyzstan (29.3%), Iraq (28.7%), Uzbekistan (25.3%) and Albania (24.3%) (Figure 15.1 Right).

Figure 15.1: Government Expenditures (Left) and Government Revenue (Right) Share in GDP, 2016

Total tax revenue share in government revenue was strikingly high in Cote d'Ivoire, 97.7%, in 2016. Followed by Mali, Uganda and Togo, where above 90% of the total government revenue came from the taxation. At the other extreme UAE and Iraq were heavily subsidizing their population with only 1.1% and 7.5% of the revenue coming from tax revenues (Figure 15.2).

Table 15.8: Definitions of Public Finance Indicators

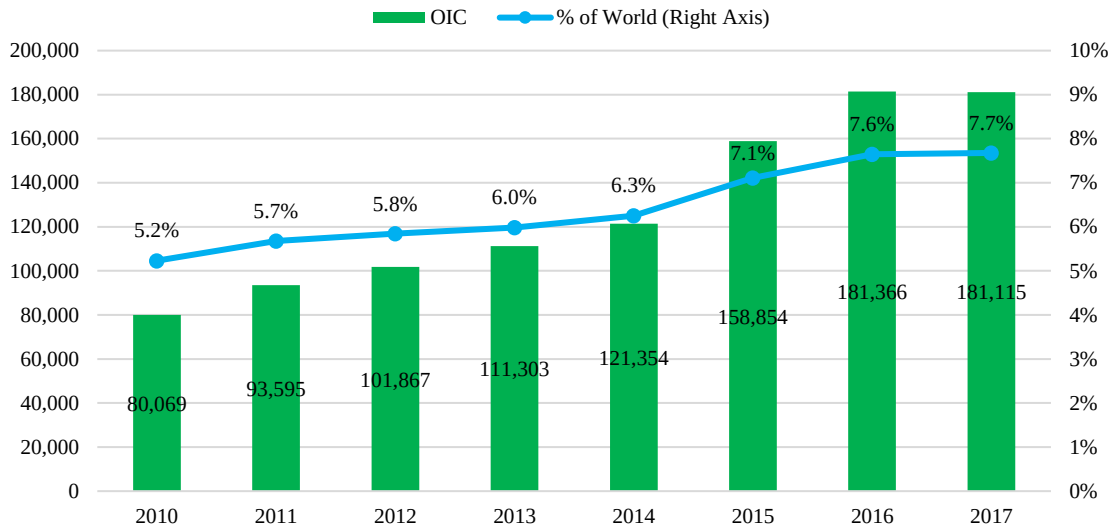

INDICATOR	DEFINITION
Balance of Government Budget	Balance of Government Budget is the difference between Government Revenues and Government Expenditures.
Government Expenditures, Share in GDP	Government Expenditures, Share in GDP gives the percentage of government expenditures in GDP at Current Market Prices, NCU.
Government Revenues, Share in GDP	Government Revenues, Share in GDP gives the percentage of government revenues in GDP at Current Market Prices, NCU.
Interest Payments	Interest payments include interest payments on government debt--including long-term bonds, long-term loans, and other debt instruments--to domestic and foreign residents.
Subsidies Payments	Subsidies, grants, and other social benefits include all unrequited, nonrepayable transfers on current account to private and public enterprises; grants to foreign governments, international organizations, and other government units; and social security, social assistance benefits, and employer social benefits in cash and in kind.
Total Tax Revenue	Tax revenue refers to compulsory transfers to the central government for public purposes. Certain compulsory transfers such as fines, penalties, and most social security contributions are excluded. Refunds and corrections of erroneously collected tax revenue are treated as negative revenue.
Total Tax Revenue, Share in Government Revenues	Total Tax Revenue, Share in Government Revenues gives the percentage of total tax revenue in total government revenues.

High number of published articles indicates the high level of scientific development and the progress of the academic activity in the country. OIC member countries published around 181,115 articles in total, in 2017. It is 126% increase since 2010, when only 80,069 articles were published by OIC citizens at the indexed journals. This increase also brought up the share of OIC member countries in the total articles published globally from only 5.2% in 2010 to 7.7% in 2017 (Figure 16.1).

More than a half, 50.4%, of these articles were originated from only three OIC member countries, namely; Iran (42,299), Turkey (32,942) and Saudi Arabia (15,955). Saudi Arabia was closely followed by Malaysia with 13,801 articles, Egypt with 13,525 articles and Pakistan with 12,218 articles. Together with Tunisia, Indonesia, Nigeria and Algeria these top ten member countries accounted for 82.2% of the total articles of the OIC member countries issued in 2017 (Table 16.1).

Figure 16.1: Number of Articles Published, 2010-2017

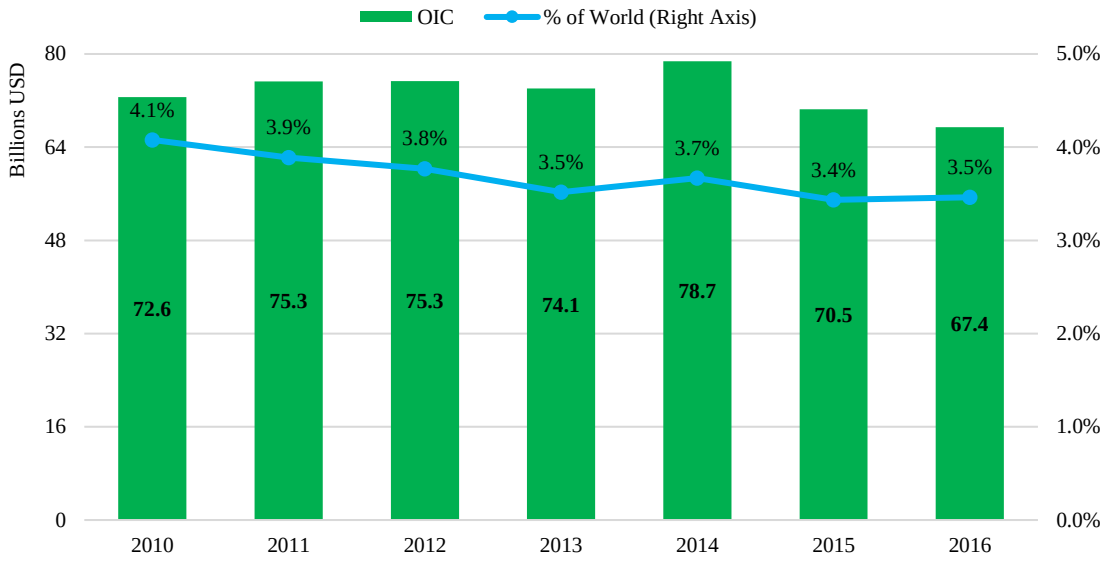

Source: ISI, Web of Science

In terms of progress, most significant growth has been observed in Palestine where number of articles increased from 70 to 545 between 2010 and 2017, followed by Iraq from 280 to 2,109, Qatar from 339 to 2,421, Suriname from 6 to 39 and Kazakhstan from 270 to 1,351 over the same period (Table 16.1).

High technology exports shows the economic output of the academic and research activity, in other words, real impact of the investments made into research and development sector. In 2010, high technology exports of the OIC member countries were around 72.6 billion USD, which has increased to 78.7 billion USD in 2014. However, due to economic slowdown afterwards, exports of the high technology goods of the OIC member countries fall to 67.4 billion USD in 2016. Consequently, the share of the OIC in the global high-tech exports plunged from 4.1% in 2010 to only 3.5% in 2016.

The significant part of the high technology exports were originated from few OIC member countries. In 2016, Malaysia with high technology exports equal to 55.6 billion USD, has produced 82.5% of the total OIC high technology exports. Malaysia was followed by Indonesia (5.9%), Turkey (3.2%), Kazakhstan (3.1%), and Saudi Arabia (1.6%). These top five countries made up 96.2% of the total OIC high technology exports. Meanwhile, strikingly lowest exporters of the high tech products were recorded in Mauritania (44 USD), Maldives (120 USD), Sierra Leone (1,152 USD), Togo (95,982 USD), Guyana (145,388 USD) and Gambia (265,957 USD) in 2016. Similar to articles and high technology exports, patent applications are also product of the long-term education and scientific research investments. Since 2010, significant progress has been observed in this field. Patent applications of the OIC member countries has increased from 41,093 in 2010 to 55,613 in 2016.

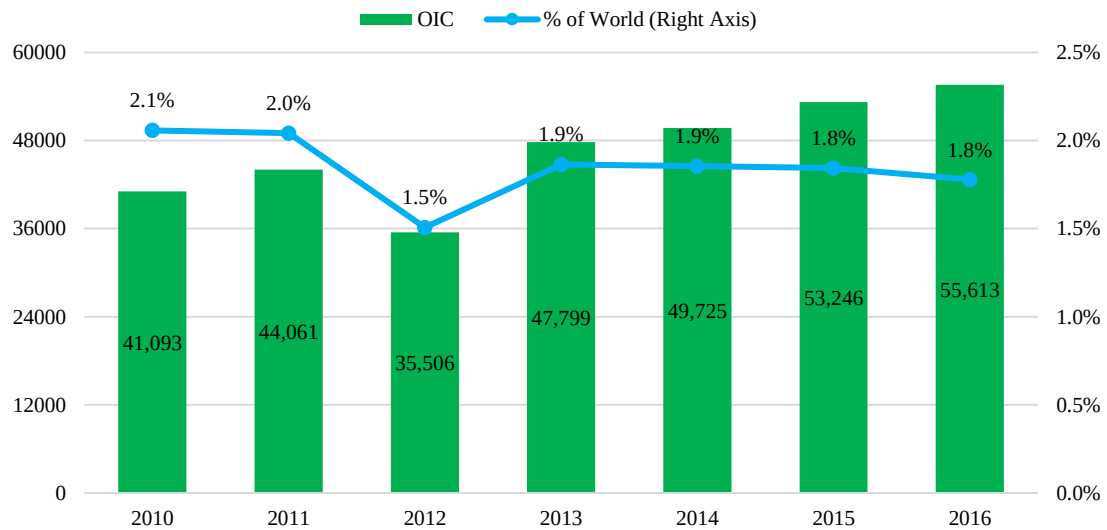

Figure 16.2: High Technology Exports, 2010-2016

Source: World Bank, World Development Indicators

However, worldwide number of patent applications has been growing substantially faster compared to OIC. Therefore, share of the OIC member countries in the total patent applications globally has dropped from 2.1% to 1.8%, between 2010 and 2016 (Figure 16.3). Distribution of the total patent applications across the member countries demonstrates the similar picture to the academic articles distribution. Top five OIC member countries with the highest number of patent applications, namely; Iran (15,632), Indonesia (9,639), Malaysia (7,236), Turkey (6,848) and Saudi Arabia (3,266) accounts for the 76.6% of the total patent applications made by OIC member countries in the year 2016. In contrast, across the six OIC member countries namely; Uganda, Guyana, Albania, Yemen, Mozambique and Kyrgyzstan number of patent applications was below 100 in 2016.

Table 16.12: Definitions of Science, Technology and Innovation Indicators

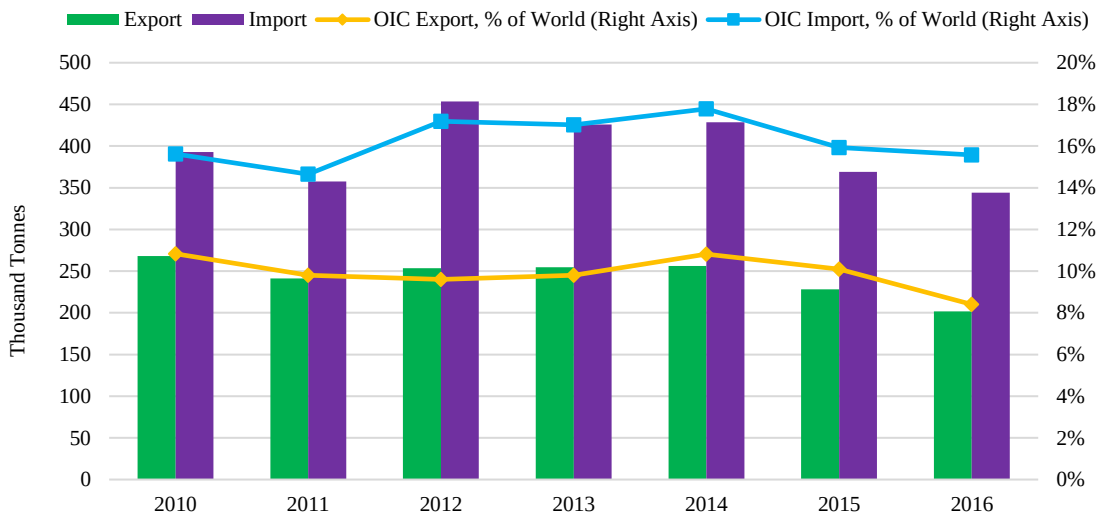

INDICATORS	DEFINITION
Articles Published	Number of scientific articles published in journals covered by Science Citation Index Expanded (SCI-EXPANDED), Social Science Citation Index (SSCI), and Arts & Humanities Citation Index (A&HCI).
Gross Expenditure on R&D (Thousand Current PPP)	Gross domestic expenditure on R&D (GERD) is the total intramural expenditure on R&D performed in the national territory during a given period, expressed in Purchasing Power Parity dollars. It includes R&D performed within a country and funded from abroad but excludes payments for R&D performed abroad.
Gross Expenditure on R&D per Capita (Current PPP)	Total domestic intramural expenditure on R&D during a given period per inhabitant (using mid-year population as reference).
Gross Expenditure on R&D, % of GDP	Gross domestic expenditure on R&D (GERD) as a percentage of GDP is the total intramural expenditure on R&D performed expressed as a percentage of GDP of the national territory or region.
High-Technology Exports	High-technology exports are products with high R&D intensity, such as in aerospace, computers, pharmaceuticals, scientific instruments, and electrical machinery. Data are in current U.S. dollars.
Patent Applications by Filing Office	Patent application is a formal request for IP rights at an IP office, whereupon the office examines the application and decides whether to grant or refuse protection. Application also refers to a set of documents submitted to an office by the applicant. A patent provides protection for the invention to the owner of the patent for a limited period.
Patent Grants by Filing Office	Patent grant is an exclusive IP right conferred to an applicant by an IP office. For example, patents are granted to applicants (assignees) to make use of and exploit an invention for a limited period of time. The holder of the rights can prevent unauthorized use of the invention.
Researchers (FTE), Total	Professionals engaged in the conception or creation of new knowledge, products, processes, methods and systems, as well as in the management of these projects.
Researchers (HC), Female (%)	Female professionals engaged in the conception or creation of new knowledge, products, processes, methods and systems, as well as in the management of these projects.
Researchers (HC), Total	Professionals engaged in the conception or creation of new knowledge, products, processes, methods and systems, as well as in the management of these projects.
Researchers per Million Inhabitants (HC)	Number of professionals engaged in the conception or creation of new knowledge (who conduct research and improve or develop concepts, theories, models, techniques instrumentation, software or operational methods) during a given year expressed as a proportion of a population of one million.

17 TOBACCO CONTROL

Total quantity of tobacco exports in the OIC member countries decreased from 268.1 thousand tonnes in 2010 to 201.6 thousand tonnes in 2016. With this reduction, OIC share in the global tobacco exports also decreased. In 2016, the total quantity of the exports of tobacco of the OIC countries accounted for 8.4% of the World total compared to their 2010 percentage of 10.8% (Figure 17.1). The largest 10 exporters accounted for 95.4% of the total OIC exports of tobacco in 2016. Among them, three leading countries alone; Mozambique with 60.9 thousand tonnes, Turkey with 50.8 thousand tonnes and Indonesia with 28.0 thousand tonnes, accounted for 69.3% of the OIC tobacco exports. They were followed by Bangladesh, Malaysia, Uganda, Lebanon, Pakistan, Uzbekistan, and UAE (Table 17.1). Total quantity of tobacco imports of the OIC member countries decreased from 392.9 thousand tonnes in 2010 to 344.0 thousand tonnes in 2016. However, their market share in the World imports of tobacco remained almost the same 15.6% (Figure 17.1). The largest 10 importers accounted for 86.7% of the total quantity imports of tobacco in 2016. Indonesia (81.5 thousand tonnes), Turkey (73.5 thousand tonnes) and Malaysia (44.5 thousand tonnes) were the leading countries, followed by Egypt, Nigeria, Mozambique, UAE, Kazakhstan, Cote d'lvoire, and Yemen (Table 17.3).

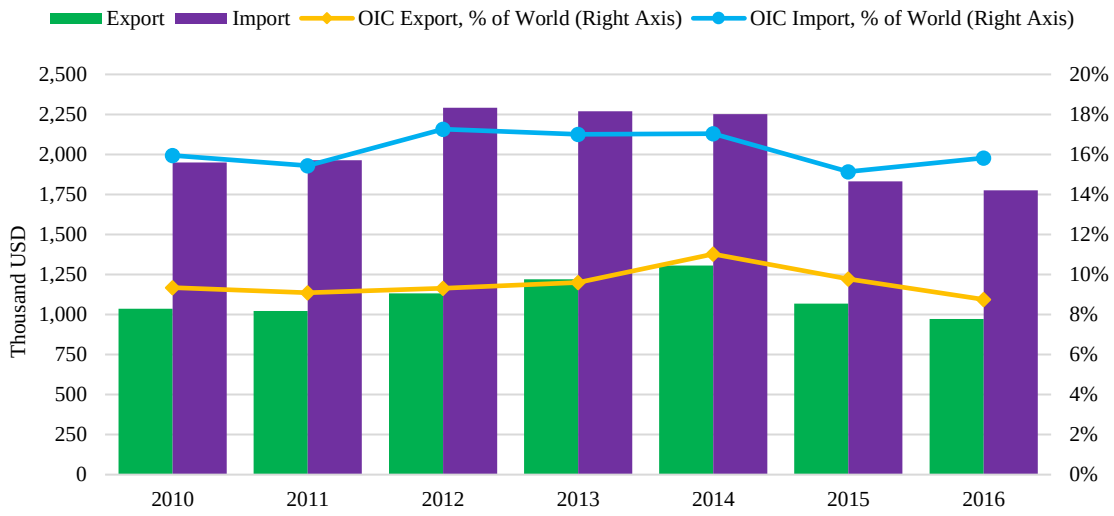

Figure 17.1: Quantity of Tobacco Imports and Exports in the OIC Member Countries, 2010-2016

Source : FAO, FAOStat Database

Value of tobacco exports of the OIC member countries decreased from 1.04 billion USD in 2010 to 0.97 Billion USD in 2016. Consequently, their market share in the World also decreased. In 2016, the total tobacco exports value of the OIC member countries accounted for 8.8% of the World total compared to their share of 9.3%, in 2010 (Figure 17.2). The largest five exporters accounted for 87.1% of the total value exports of tobacco in 2016. These are Turkey (358.2 thousand USD), Mozambique (232.4 thousand USD) and Indonesia (128.6 thousand USD) Bangladesh (65.8 thousand USD) and Malaysia (61.8 thousand USD) (Table 12.2). Total import value of tobacco in the OIC member countries also decreased from 1.95 billion USD in 2010 to 1.78 billion USD in 2016. Because of this reduction, their market share in the World imports of tobacco also slightly decreased. In 2016, total imports value of tobacco products of the OIC countries accounted for 15.8% of the World total compared to their 2010 share of 16.0% (Figure 17.2). The largest five importers accounted for 72.3% of the total OIC imports of tobacco, in terms of value, in 2016. Particularly, these are Indonesia with 477.3 thousand USD, Turkey with 428.5 thousand USD, and Malaysia with 183.7 thousand USD, Egypt with 101.2 thousand USD and Cote d'Ivoire with 92.5 thousand USD (Table 17.4).

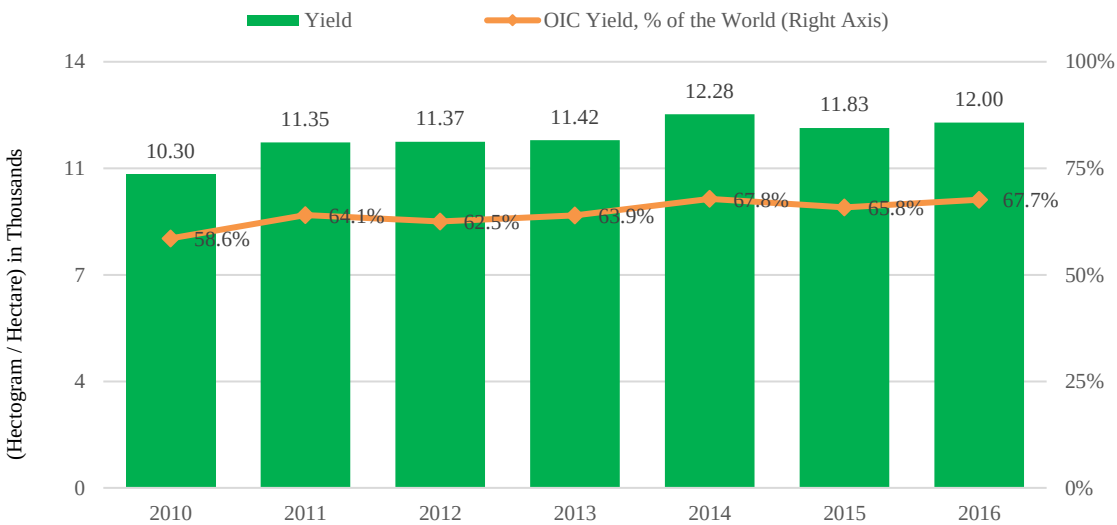

Figure 17.2: Value of Tobacco Imports and Exports in the OIC Member Countries, 2010-2016

Source : FAO, FAOStat Database

Total production of the unmanufactured tobacco over the period between 2010 and 2016 increased from 611,065 tonnes to 724,971 tonnes. It comprised around 10.9% of the World unmanufactured tobacco production (Table 17.6). In terms of the productivity, yield of unmanufactured tobacco in the OIC member countries also increased by 17%, from 10,295 hectograms per hectare in 2010 to 12,000 hectograms per hectare in 2016. As a result, their share in the World total yield of unmanufactured tobacco also substantially increased, from 58.6% in 2010 to 67.7% in 2016 (Figure 17.3). The most productive OIC member country in terms of the yield of the tobacco per area harvested in 2016 was UAE with 152.7 thousands hectogram/hectares. Oman, Morocco, Kazakhstan, Mali, Kyrgyzstan, Niger, Yemen, Pakistan, and Turkmenistan followed the UAE (Table 17.7).

Table 17.8: Definitions of Tobacco Control Indicators

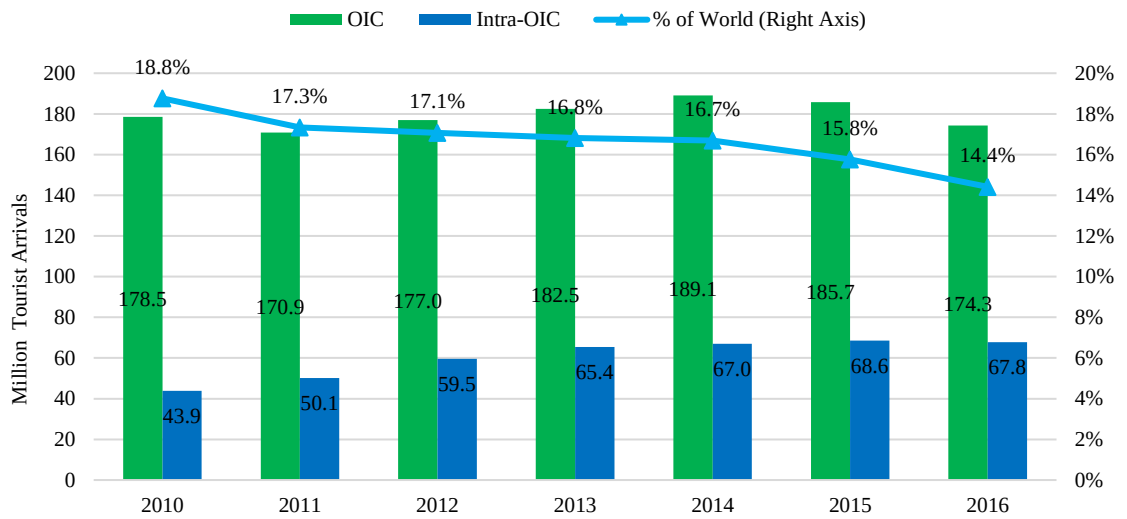

INDICATOR	DEFINITION
Export Quantity, Tobacco, Total	Any of a genus of plants, Nicotiana, cultivated for their leaves. Tobacco is consumed primarily through smoking, and less extensively through chewing or sniffing. N. tabacum is by far, the most important species. The main active element of tobacco leaves is alkaloid nicotine, a highly toxic substance. Quantity indices for the aggregate agricultural and aggregate food products represent the changes in the price-weighted sum of quantities of products traded between countries. The weights are the unit value averages of 1989-1991. The formulas used are of the Laspeyres type.Nicotiana tabacum.
Export Value, Tobacco, Total	Any of a genus of plants, Nicotiana, cultivated for their leaves. Tobacco is consumed primarily through smoking, and less extensively through chewing or sniffing. N. tabacum is by far, the most important species. The main active element of tobacco leaves is alkaloid nicotine, a highly toxic substance. Value indices represent the change in the current values of Export f.o.b (free on board) all expressed in US dollars.
Import Quantity, Tobacco, Total	Any of a genus of plants, Nicotiana, cultivated for their leaves. Tobacco is consumed primarily through smoking, and less extensively through chewing or sniffing. N. tabacum is by far, the most important species. The main active element of tobacco leaves is alkaloid nicotine, a highly toxic substance. Quantity indices for the aggregate agricultural and aggregate food products represent the changes in the price-weighted sum of quantities of products traded between countries. The weights are the unit value averages of 1989-1991. The formulas used are of the Laspeyres type.
Import Value, Tobacco, Total	Any of a genus of plants, Nicotiana, cultivated for their leaves. Tobacco is consumed primarily through smoking, and less extensively through chewing or sniffing. N. tabacum is by far, the most important species. The main active element of tobacco leaves is alkaloid nicotine, a highly toxic substance. Value indices represent the change in the current values of Import c.i.f. (cost, insurance and freight) all expressed in US dollars. For countries which report import values on an f.o.b. (free on board) basis, these are adjusted to approximate c.i.f. values (by a standard factor of 112 percent). Unmanufactured dry tobacco, including refuse that is not stemmed or stripped, or is partly or wholly stemmed or stripped.
Unmanufactured Tobacco, Area Harvested	Data refer to the area from which a crop is gathered. Area harvested, therefore, excludes the area from which, although sown or planted, there was no harvest due to damage, failure, etc. It is usually net for temporary crops and some times gross for permanent crops. Nicotiana tabacum. Unmanufactured dry tobacco, including refuse that is not stemmed or stripped, or is partly or wholly stemmed or stripped.
Unmanufactured Tobacco, Production	Figures relate to the total domestic production whether inside or outside the agricultural sector, i.e. it includes non-commercial production and production from kitchen gardens. Unless otherwise indicated, production is reported at the farm level for crop (i.e. excluding harvesting losses). Nicotiana tabacum. Unmanufactured dry tobacco, including refuse that is not stemmed or stripped, or is partly or wholly stemmed or stripped.
Unmanufactured Tobacco, Yield	Harvested production per unit of harvested area for crop products. Nicotiana tabacum. Unmanufactured dry tobacco, including refuse that is not stemmed or stripped, or is partly or wholly stemmed or stripped.

18 TOURISM

Tourism is one of the major sectors of the economy. The sector makes both direct and indirect observable contributions to the economy. Tourism sector showed remarkable progress at intra-OIC level during the last decades. Number of total tourist arrivals slightly decreased between 2010 and 2016, from 178.5 million arrivals to 174.3 million arrival, however, number of intra-OIC tourist arrivals increased by around 54.4%, from 43.9 million arrivals to 67.8 million arrivals over the same period. This figure shows development of the intra-OIC cooperation in tourism sector. It worth mentioning that, global tourism cooperation has also developed during the same period with even higher tempos. In this retrospect, OIC share in the World total tourist arrivals has decreased from 18.8% to 14.4% (Figure. 18.1). In 2016, top ten most popular touristic destinations among the OIC member countries, hosted around 75.8% of the total OIC tourist arrival. Among these top tourist arrival destinations, Turkey with 30.3 million arrivals which accounts for a 17.4%, share of total OIC tourist arrivals, took place on the top. Turkey was closely followed by Malaysia with 15.4% and Saudi Arabia with 10.4% shares in the total OIC tourist arrivals (Table 18.3). In a similar manner, top 10 OIC member countries in terms of tourist arrivals from other member countries accounted for 82.4% of the intra-OIC tourist arrivals. Saudi Arabia took the lead with a 20.8% share of the total intra-OIC tourist arrivals followed by Bahrain with 14.5%, and Turkey with 8.7% shares (Table 18.4).

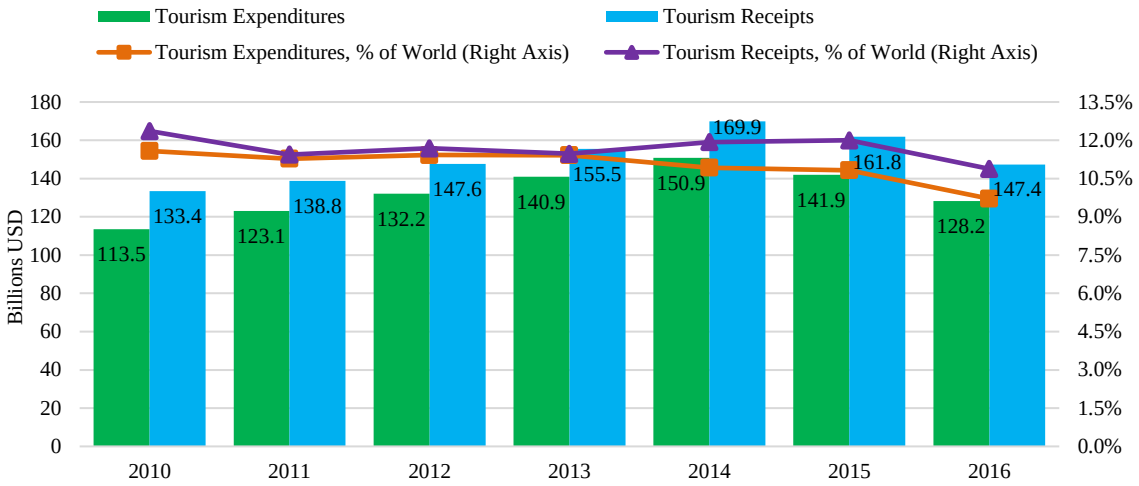

Figure 18.1: Tourist Arrivals in OIC Member Countries, 2010-2016

Source : World Bank, UN, World Tourism Organization

Parallel to intra-OIC tourist arrivals, income from tourism sector had also increased in the OIC member countries. Total OIC tourism receipts increased from 133.4 billion USD in 2010 to 147.4 billion USD in 2016, what was equivalent to 10.4% increase from the year 2010. Total OIC tourism receipts reached the peak point at 169.9 billion USD in 2014, afterwards it dropped to 161.8 billion USD in 2015 and again to 147.4 billion USD in 2016. The relative share of OIC member countries in the World total tourism receipts decreased from 12.4% in 2010 to 10.9% in 2016 (Figure 18.2). When tourist receipts of the countries analysed individually top 10 member countries received 84.8 % of total OIC tourism receipts. Turkey was the leading country with the highest share of total OIC tourist receipts, around 18.1%. Turkey was followed by UAE with 13.2% and Malaysia with 12.3% (Table 18.6). The outbound tourism has also moved upward in the OIC countries. OIC tourism expenditures increased from 113.5 billion USD in 2010 to 128.2 billion USD in 2016, with the peak point at 150.8 billion USD in the year 2014. However, the relative share of OIC countries in the World for total tourism expenditures decreased from 11.6% in 2010 to 9.7% in 2016 (Figure. 18.2). Saudi Arabia accounted for the largest share in total OIC tourism expenditures, around 15.4%. It was followed by UAE with 13.4%, Kuwait with 10.3%, Qatar with 10.3%, and Malaysia 8.2% (Table 18.5).

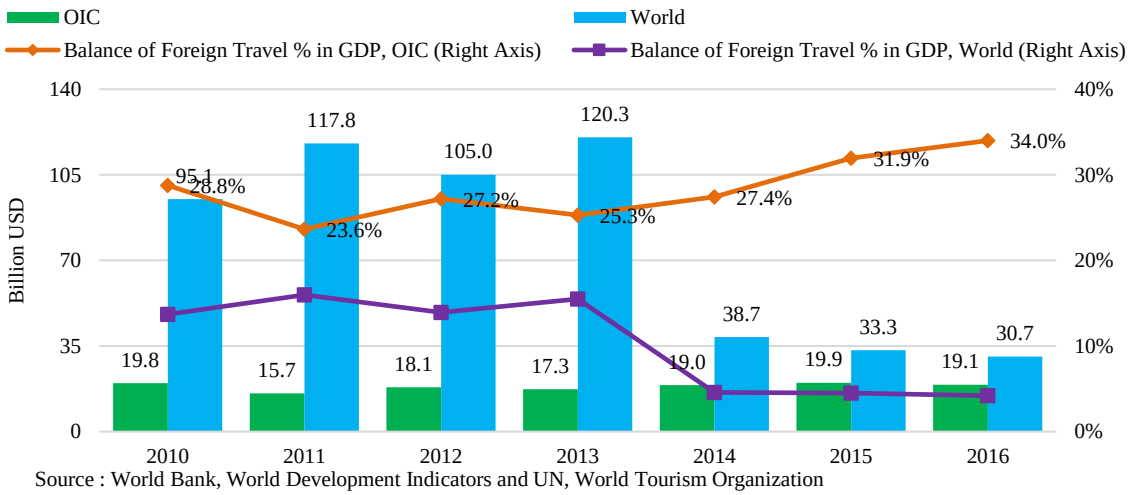

Figure 18.2: Tourism Receipts and Expenditures, 2010-2016

Source : World Bank, World Development Indicators and UN, World Tourism Organization

Total OIC balance of foreign travel slightly decreased from 19.8 billion USD in 2010 to 19.1 billion USD in 2016. In comparison, substantially higher decrease of the balance of foreign travel occurred at the global level equivalent to 67.7%, from 95.1 billion USD to 30.7 billion USD for the above mentioned years (Figure 18.3). Across the 35 OIC member countries with available data, Turkey had the highest balance of foreign travel, 21.6 billion USD, followed by Malaysia with 7.6 billion USD and Morocco with 5.6 billion USD. Meanwhile, 19 OIC member countries had the negative balances, lead by Kuwait (-12.4 billion USD) and followed by Saudi Arabia (-7.6 billion USD) and Nigeria (–3.4 billion USD) (Table 18.1). The share of the balance of foreign tourism in GDP increased from 28.8% in 2010 to 34.0% in 2016, for OIC countries on average, while the balance of international tourism in the World GDP decreased from 13.7% to 4.2% over the same period. In 2016, among the OIC member countries with available data, Maldives had the highest share of the balance of foreign tourism in the GDP, 59.6%, followed by Jordan 9.3% and Morocco 5.4% (Table 18.2).

Table 18.7: Definitions of Tourism Indicators

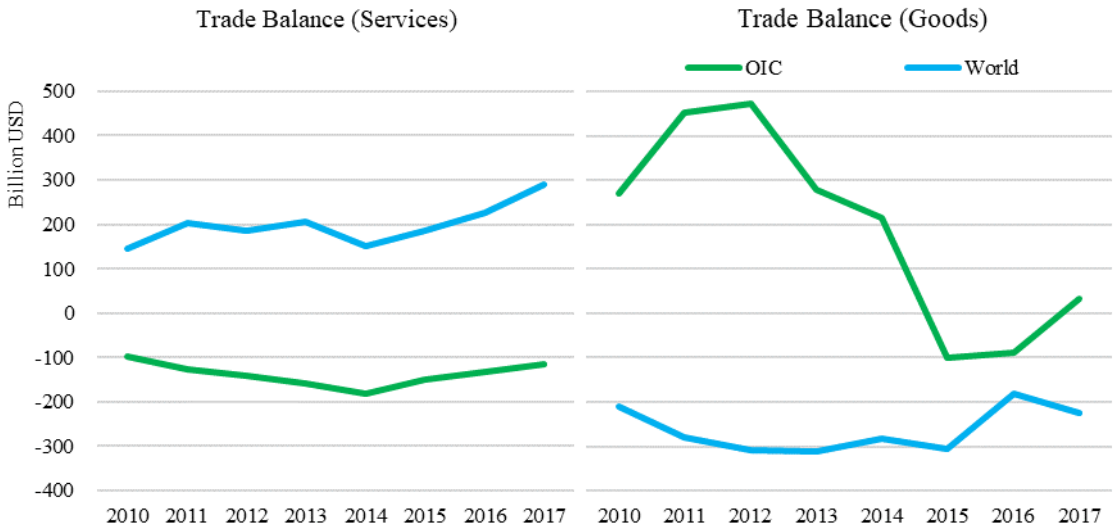

INDICATOR	DEFINITION
Balance of Foreign Travel	Calculated by subtracting the Tourism Expenditures from the Tourism Receipts.
Balance of International Tourism, % of GDP	An indicator used for measuring the net contribution of the international tourism sector to the economy of a country evaluated by relating the balance of international tourism as a percentage of the GDP.
Tourist Arrivals	Every person visiting another country than the one originally living in for any other reason than remuneration.
Intra-OIC Tourist Arrivals	An indicator used to measure the arrivals of tourist in OIC member countries from other OIC member countries.
Tourism Expenditures	The expenditure on tourism outside their country of residence made by visitors (same-day visitors and tourists) from a given country of origin.
Tourism Receipts	The receipts earned by a destination country from inbound tourism and cover all tourism receipts resulting from expenditure made by visitors from abroad, on for instance lodging, food and drinks, fuel, transport in the country, entertainment, shopping, etc.

19 TRADE

OIC member countries, as a group, had a net trade in goods surplus over the period from 2010 to 2017, except for the net trade in goods deficit in the years 2015 and 2016. Furthermore, OIC countries demonstrated a pointed downward trend in goods trade balance from 271.7 billion USD in 2010 to 33.7 billion USD in 2017. Meanwhile, the net trade in goods of the World as a country group remained negative during the whole period under consideration. Net trade in goods deficit of the World further expanded from (-210.9) billion USD in year 2010 to (-224.8) billion USD in 2017. The largest deficit of (-306.8) billion USD in the global goods trade was in 2015 (Figure 19.1).

Figure 19.1: Balance of Payment, Net Trade in Goods and Services, 2010-2017

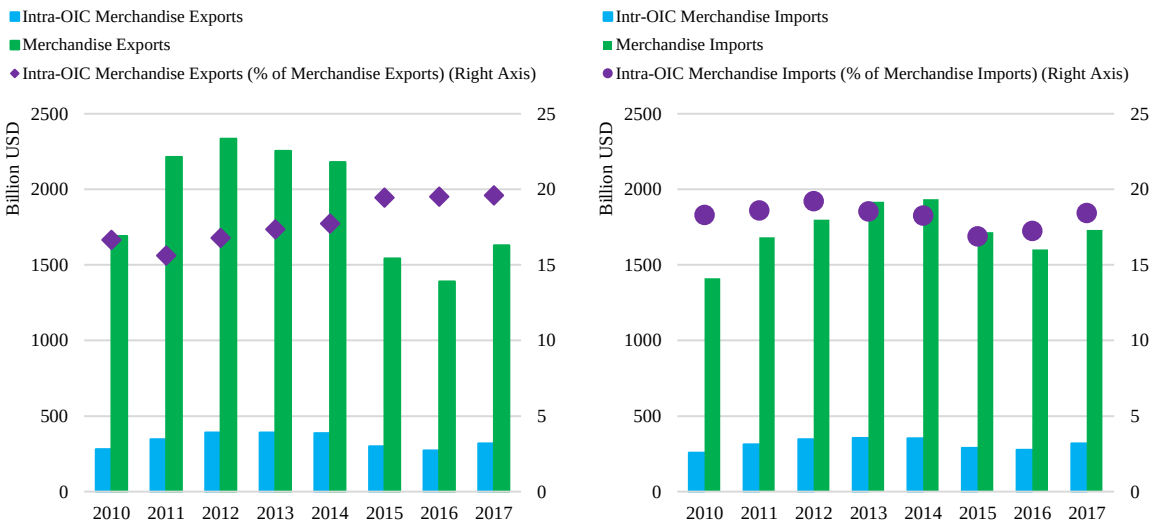

Source: International Monetary Fund, International Financial Statistics Database

At the individual country level, only nine OIC member countries with available data had net trade in goods surplus in 2017. Among those with positive net trade in goods balances, Saudi Arabia took the lead with a surplus of 90.9 billion USD. Qatar and Malaysia followed Saudi Arabia with balances of 37.9 billion USD and 22.7 billion USD, respectively (Table 19.3).

In contrast to the rest of the World, OIC member countries, as a group, remained in net trade in services deficit during the whole period in focus. It demonstrated a negative growth from (-98.8) billion USD in 2010 to (-182.4) billion USD in 2014. The fast recovery started in 2015 and deficit contracted to (-116.1) billion USD in 2017. Meanwhile, there has been a positive balance in service trade at the World level. World net trade in services upward fluctuated since 2010, until 2014 when it reached to 150.1 billion USD. Afterwards, trend was further upwards to 291.4 billion USD in 2017 (Figure 19.1). In terms of net trade in services, seven OIC member countries with available data had positive balances, in 2017. Turkey was a leading country with approximately 20 billion USD net trade in services proficit. Turkey was followed by Morocco (7.5 billion USD), Bahrain (3.6 billion USD), Egypt (2.2 billion USD), Jordan (2.1 billion USD), Maldives (1.9 billion USD) and Albania (1.2 billion USD) (Table 19.2).

Although the share of primary commodities in the merchandise exports of the World has been falling, it still represents very significant chunk of OIC merchandise exports. Between 2010 and 2014, OIC merchandise exports grew significantly from 1,691 billion USD to 2,180 billion USD, reaching the record point in 2012 at 2,334 billion USD. Due to the downfall of the commodity prices, OIC merchandise exports collapsed to 1,391 billion USD in 2016 and started to recover in 2017 with total 1,629 billion USD of merchandise exports to World (Figure 19.2).

Figure 19.2: OIC Merchandise Trade

Source: International Monetary Fund, Direction of Trade Statistics Database

Despite exposing the similar trend to merchandise exports with the World during the downfalls, trade among the OIC member countries has been steadily increasing since 2010. In 2017, intra-OIC merchandise exports amounted to 319.5 billion USD, or 19.6% of the total merchandise exports of the OIC. Intra-OIC merchandise exports was only 281.6 billion USD and constituted 16.7% of the total OIC merchandise exports in 2010 (Figure 19.2). In 2017, Somalia took the lead by exporting more than 88.4% of its merchandise to OIC member countries. It was followed by Gambia, Sudan, Syria, and Togo, each with over 70%. Afghanistan (62.4%), Yemen (60.7%), Bahrain (56.0%), Lebanon (55.6%) and Tajikistan (52.3%) were among the top 10 OIC member countries by the share of intra-OIC exports in their total merchandise exports (Table 19.11). In volume, UAE was the leading country, exporting around 70.8 billion USD to OIC member countries in 2017, followed by Saudi Arabia with 48.6 billion USD and Turkey with 45.1 billion USD. These three countries originated 51.5% of the total intra-OIC exports and adding Malaysia, Indonesia, Iran, Qatar, Bahrain, Oman and Egypt, these value for top 10 OIC countries reaches to 79.5% (Table 19.10).

The merchandise imports of the OIC as a group increased extensively from 1,412 billion USD in 2010 to 1,732 billion USD in 2017 (Figure 19.2). It worth noting that, merchandise imports of the OIC is concentrated in a few member countries. The largest five importers accounted for 57% of total merchandise imports in 2017 and this portion reached to 73.1% for the top 10 OIC importers. UAE, Turkey and Malaysia were the leading countries with around 257.7 billion USD, 233.8 billion USD and 206.7 billion USD respectively in 2017, followed by Indonesia 160.7 billion USD and Saudi Arabia 128 billion USD.

With the increasing trade among the OIC member countries, intro-OIC merchandise imports also showed a growth except for breakdowns in 2015 and 2016. In 2010, it amounted to 258.4 billion USD, or 18.3% of the total merchandise imports of the OIC. That volume has reached 319.1 billion USD in 2017 (Figure 19.2). In 2017, Afghanistan and Oman took the lead by importing 65.2% and 53% of its merchandise from the OIC member countries. More than 40% of the merchandise imports of Djibouti, Mali, Turkmenistan and Comoros were also imported from the OIC member countries. The intra-OIC imports of Yemen, Sudan, Iraq and Chad accounted for above 35% what placed them among the top 10 OIC member countries by the share of intra-OIC imports in their total merchandise imports. In volume, UAE was the leading country in intra-OIC imports, with 44 billion USD imports from the OIC member countries, followed by Turkey with 32.0 billion USD and Iran with 24.7 billion USD. Adding Saudi Arabia, Indonesia, Pakistan, Malaysia, Egypt, Oman and Iraq, these 10 countries accounted for 70.5% of the total intra-OIC imports (Figure 19.2).

Table 19.20: Definitions of Trade Indicators

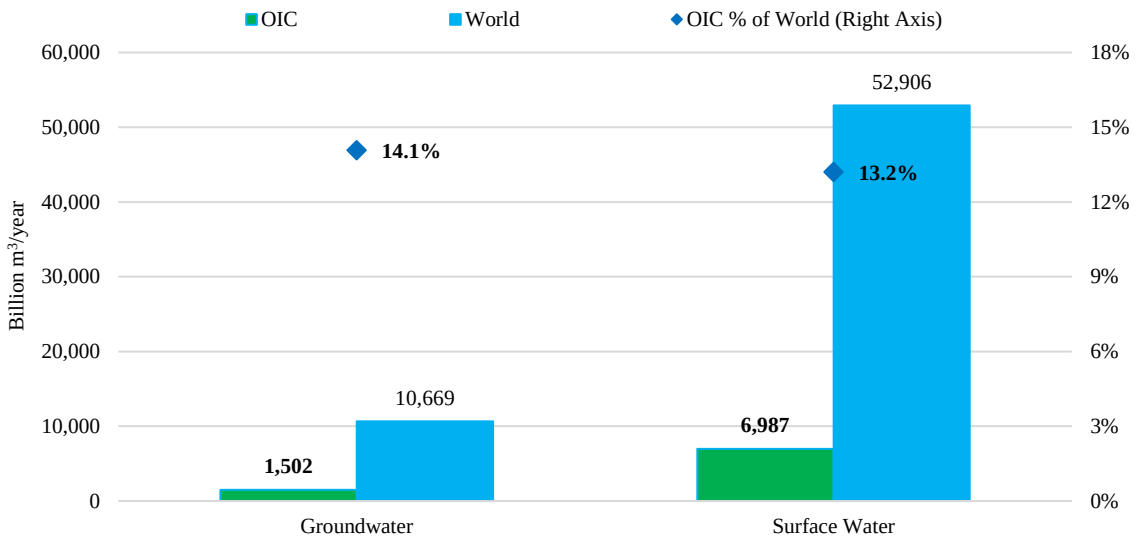

INDICATOR	DEFINITION
Balance of Payments: Current Account	Current account balance is the sum of net exports of goods and services, net income, and net current transfers. It excludes exceptional financing.
Balance of Payments: Net Trade in Services	Balance in Services (previously nonfactor services) refers to net economic output of intangible commodities that may be produced, transferred, and consumed at the same time. International transactions in services are defined by the IMF's Balance of Payments Manual (1993).
Balance of Payments: Trade Balance	Net trade in goods (trade balance) is the difference between exports and imports of goods. Service balance is not included. But the category includes goods previously included in services: goods received or sent for processing and their subsequent export or import in the form of processed goods.
Exports of Goods and Services in National Currency	Exports of Goods and Services consist of sales, barter, or gifts or grants, of goods and services from residents to non-residents. Expressed in national currency at current prices.
Exports of Goods and Services, % of GDP	The share of Exports of Goods and Services in Gross Domestic Product (GDP), expressed in percentage.
Fuel Exports, % of Merchandise Exports	The share of fuel exports in the merchandise exports of the country, expressed in percentage.
Fuel Imports, % of Merchandise Imports	The share of fuel imports in the merchandise imports of the country, expressed in percentage.
Imports of Goods and Services, % of GDP	The share of Imports of Goods and Services in Gross Domestic Product (GDP), expressed in percentage.
Imports of Goods and Services, Annual % Change	Annual growth rate of Imports of Goods and Services based on constant national currency.
Intra-OIC Merchandise Exports	Merchandise exports of a country to the OIC member countries.
Intra-OIC Merchandise Exports, % of Merchandise Exports	Merchandise exports of a country to the OIC member countries, expressed as a percentage of its total merchandise exports.
Intra-OIC Merchandise Imports	Merchandise imports of a country from the OIC member countries.
Intra-OIC Merchandise Imports, % of Merchandise Imports	Merchandise imports of a country from the OIC member countries, expressed as a percentage of its total merchandise imports.
Manufactures Exports, % of Merchandise Exports	The share of manufactures exports in the merchandise exports of the country, expressed in percentage.
Manufactures Imports, % of Merchandise Imports	The share of manufactures imports in the merchandise imports of the country, expressed in percentage.
Merchandise Exports	Merchandise exports show the f.o.b. value of goods provided to the rest of the world.
Merchandise Imports	Merchandise imports show the c.i.f. value of goods received from the rest of the world.
Non-Fuel Primary Goods Exports, % of Merchandise Exports	The share of non-fuel primary commodities in the merchandise exports of the country, expressed in percentage.
Non-Fuel Primary Goods Imports, % of Merchandise Imports	The share of non-fuel primary commodities in the merchandise imports of the country, expressed in percentage.

20 WATER

Total freshwater resources, also officially named as Total Renewable Water Resources (TRWR) due to its renewability and other unique nature measured and represents average data for long periods. Besides, it worth noting that there is an overlap based on the origin and type due to the unique nature of the renewable water resources. According to the average data of 2013-2017, Groundwater resources of OIC member countries is 1,502 billion m^3/year, which constitutes 14.1% of the global groundwater resources measured as 10,669 billion m^3/year (Figure 20.1). OIC member countries with the largest groundwater reserves have been Indonesia with 457 billion m3/year, Guyana with 103 billion m^3/year and Cameroon 100 billion m^3/year. These three countries alone comprises 44% of the total groundwater resources of the OIC. Together with Suriname, Nigeria, Turkey, Malaysia, Gabon, Pakistan and Iran, these top ten countries account for 75.6% of the total OIC groundwater resources. On the contrary, some OIC member countries have limited amount of groundwater resources, particularly, in Comoros, Palestine, Libya, Jordan and Gambia groundwater resources discovered so far were between 0.5 billion m^3/year and 1 billion m^3/year (Table 20.8).

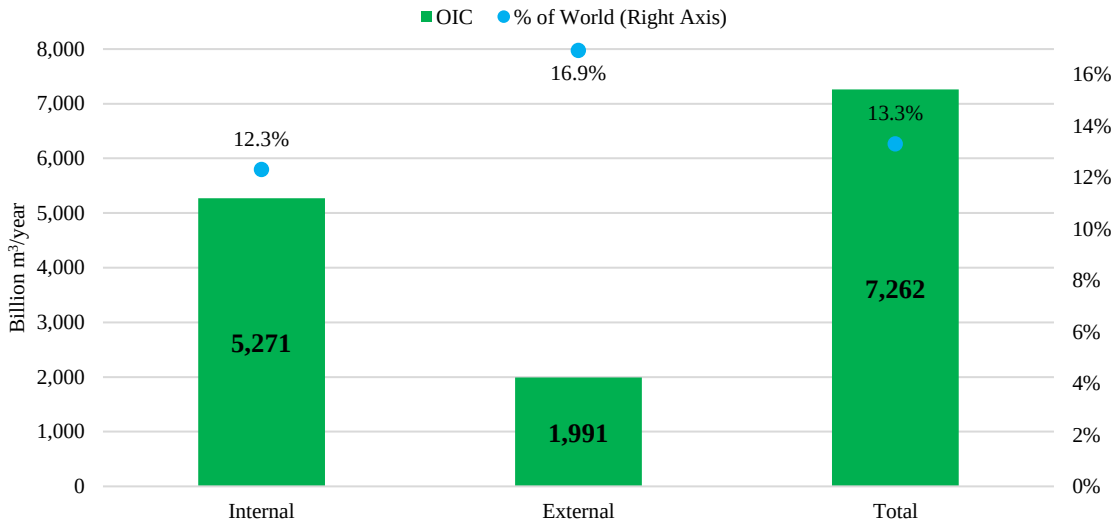

Figure 20.1: Renewable Groundwater and Surface Water Resources, 2013-2017

Source: Food and Agriculture Organisation (FAO), AQUASTAT Database

OIC member countries as a group possesses 6.981 billion m3/year of surface water resources equivalent to 13.2% of the surface water resources worldwide (Figure 20.1). Similar to the groundwater, the surface water resources also have been distributed unequally across the member countries of OIC. Top three member countries, namely; Indonesia (28.2%), Bangladesh (17.3%) and Malaysia (8.1%) have around 54% of the OIC total surface water resources. They were followed by Nigeria, Cameroon, Guyana, Pakistan, Guinea, Mozambique, and Turkey with relatively less surface water resources (Table 20.9). TRWR of OIC member countries was 7,262 billion m^3/year consisting of internal renewable water resources (IRWR) 5,271 billion m3/year or 72.6% of TRWR and external renewable water resources 1,991 billion m^3/year or 27.4% of the TRWR. Around 12.3% of the internal renewable water resources of the World comprised in OIC. Among the OIC member countries, Indonesia and Malaysia holds 49.3% of the OIC Total IRWR. Following Indonesia and Malaysia comes Cameroon (5.2%), Guyana (4.6%), Turkey (4.3%), Guinea (4.3%), Nigeria (4.2%), Gabon (3.1%), Sierra Leone (3.0%) and Iran (2.4%) (Table 20.11). These top 10 countries together possess 80.4% of the OIC IRWR. As the nature does not follow official country boundaries drafted on a map, the renewable water sources originated in one country may flow to other countries and statistically measured as external renewable water resources (ERWR) (Figure 20.2). This claim is true both for surface and groundwater resources. Furthermore, it can be noted that, over the centuries although it has not cause any issue, in recent decades plenty of regional and bilateral conflicts emerged over the claims on the water resources.

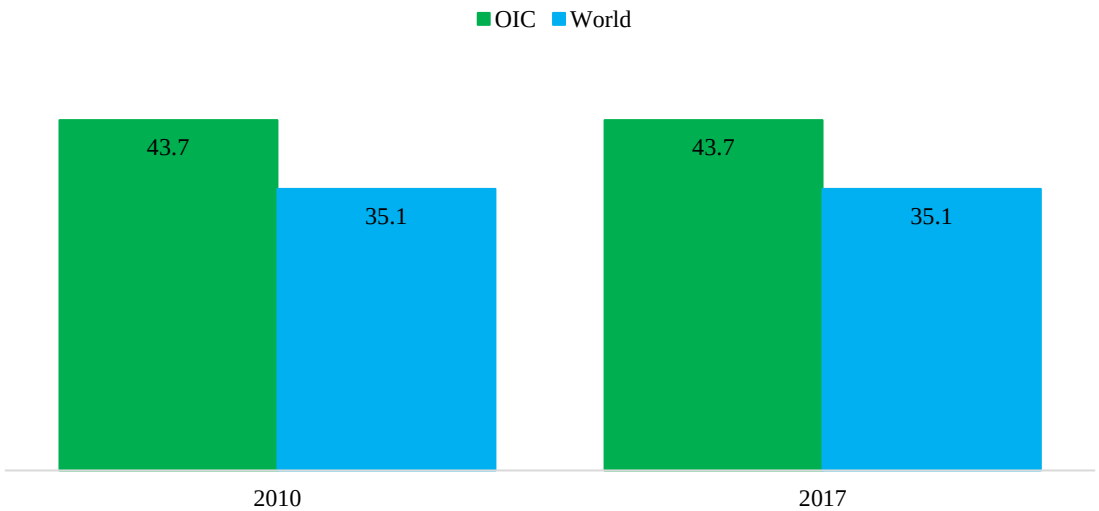

Figure 20.2: Total, Internal and External Renewable Water Resources, 2013-2017

Source: Source: Food and Agriculture Organisation (FAO), AQUASTAT Database

Nearly 17% of the global ERWR comprised in OIC member countries. Bangladesh took the lead with ERWR of 1,122 billion m3/year which was equal to 56.4% of the total OIC ERWR. Together with Pakistan, Mozambique, Nigeria and Mali these five countries accounted for 78.1% of the total OIC ERWR. Adding up Egypt, Iraq, Kazakhstan, Sudan and Uzbekistan, ERWR of the top ten OIC member countries was 1,777 billion m3/year or almost 90% of the total ERWR of the OIC member countries. OIC member countries have 7,262 billion m3/year TRWR, which is around 13.3% of the TRWR worldwide. Top ten OIC member countries hold nearly 77% of the all TRWR of the OIC. Two most resource reach countries are Indonesia with 2,019 billion m3/year or 27.8% and Bangladesh 1,227 billion m3/year or 16.9% (Table 20.12). Dependency ratio describes the countries dependency on external water resources. On average, OIC countries as a group in a more vulnerable situation compared to the World (Figure 20.3). The highest dependency ratio was observed in Kuwait 100, which means full dependency on external resources, followed by Turkmenistan, Egypt, Bahrain, Mauritania, Sudan, Bangladesh, Niger, Uzbekistan and Pakistan (Table 20.7).

Table 20.19: Definitions of Water Indicators

INDICATOR	DEFINITION
Agricultural Water Managed Area, Total	Sum of total area equipped for irrigation and areas with other forms of agricultural water management (non-equipped flood recession cropping area and non-equipped cultivated wetlands and inland valley bottoms).
Area Equipped for Irrigation Full Control, Total	The sum of surface irrigation, sprinkler irrigation and localized irrigation.
Area Equipped for Irrigation, Total	Area equipped to provide water (via irrigation) to crops. It includes areas equipped for full/partial control irrigation, equipped lowland areas, and areas equipped for spate irrigation.
Average Precipitation in Depth	Long-term average (over space and time) of annual endogenous precipitation (produced in the country) in depth.
Average Precipitation in Volume	Long-term average (over space and time) of annual endogenous precipitation (produced in the country) in volume.
Dam Capacity, Total	Total cumulative storage capacity of all dams in each country. The value indicates the sum of the theoretical initial capacities of all dams, which does not change with time. The amount of water stored within any dam is likely less than the capacity due to silting. Data on small dams may not be included, although their aggregate storage capacity is generally not significant. Detailed information on dams can be accessed in regional geo-referenced dam databases on http://www.fao.org/nr/water/aquastat/dams/index.stm.
Dependency Ratio	Indicator expressing the percent of total renewable water resources originating outside the country. This indicator may theoretically vary between 0% and 100%. A country with a dependency ratio equal to 0% does not receive any water from neighbouring countries. A country with a dependency ratio equal to 100% receives all its renewable water from upstream countries, without producing any of its own. This indicator does not consider the possible allocation of water to downstream countries.
Groundwater: Total Renewable	This is the sum of the internal renewable groundwater resources and the total external actual renewable groundwater resources. In general natural and actual external (entering) renewable groundwater resources are considered to be the same.
Surface Water: Total Renewable	This is the sum of the internal renewable surface water resources and the total external actual renewable surface water resources.
Water Resources: Total External Renewable	Actual External Renewable Water Resources (ERWR_actual): That part of the country's annual renewable water resources that are not generated in the country. It includes inflows from upstream countries (groundwater and surface water), and part of the water of border lakes and/or rivers. Contrary to natural external renewable water resources (i.e. the situation without human influence), ERWR_actual take into account the quantity of flow reserved by upstream (incoming flow) and/or downstream (outflow) countries through formal or informal agreements or treaties, and possible water abstraction occurring in the upstream countries. Therefore, it may vary with time. In extreme cases, it may be negative when the flow reserved to downstream countries is more than the incoming flow. The rules applied for computing ERWR are given in Box 6 (page 15) of FAO Water Report 23. 2003. Review of world water resources by country (http://www.fao.org/ag/agl/aglw/aquastat/reports/index2.stm).

INDICATOR	DEFINITION
Water Resources: Total Internal Renewable	Internal Renewable Water Resources (IRWR): Long-term average annual flow of rivers and recharge of aquifers generated from endogenous precipitation. Double counting of surface water and groundwater resources is avoided by deducting the overlap from the sum of the surface water and groundwater resources.
Water Resources: Total Renewable	Total Actual Renewable Water Resources (TRWR_actual): The sum of internal renewable water resources (IRWR) and external actual renewable water resources (ERWR_actual). It corresponds to the maximum theoretical yearly amount of water actually available for a country at a given moment.
Water Resources: Total Renewable per Capita	Total annual actual renewable water resources per inhabitant
Water Withdrawal, Agriculture, % of Total	Agricultural water withdrawal as percentage of total water withdrawal. Agricultural water withdrawal includes annual quantity of water withdrawn for irrigation, livestock and aquaculture purposes. It also includes renewable freshwater resources as well as over-abstraction of renewable groundwater or withdrawal of fossil groundwater, use of agricultural drainage water, (treated) wastewater and desalinated water.
Water Withdrawal, Industrial, % of Total	Industrial water withdrawal as percentage of total water withdrawal. Annual quantity of water withdrawn for industrial uses includes renewable water resources as well as potential over-abstraction of renewable groundwater or withdrawal of fossil groundwater and potential use of desalinated water or treated wastewater. This sector refers to self-supplied industries not connected to the public distribution network. The ratio between net consumption and withdrawal is estimated at less than 5%. It includes water for the cooling of thermoelectric plants, but it does not include hydropower.
Water Withdrawal, Municipal, % of Total	Municipal water withdrawal as percentage of total water withdrawal. Annual quantity of water withdrawn primarily for the direct use by the population includes renewable freshwater resources as well as potential over-abstraction of renewable groundwater or withdrawal of fossil groundwater and the potential use of desalinated water or treated wastewater. It is usually computed as the total water withdrawn by the public distribution network. It can include that part of the industries, which is connected to the municipal network. The ratio between the net consumption and the water withdrawn can vary from 5 to 15% in urban areas and from 10 to 50% in rural areas.
Water Withdrawal, per Capita	Total annual amount of water withdrawn per capita
Water Withdrawal, Total	Annual quantity of water withdrawn for agricultural, industrial and municipal purposes. It includes renewable freshwater resources as well as potential over-abstraction of renewable groundwater or withdrawal of fossil groundwater and potential use of desalinated water or treated wastewater. It does not include in stream uses, which are characterized by a very low net consumption rate, such as recreation, navigation, hydropower, inland capture fisheries, etc.

TECHNICAL NOTES

In calculating statistical aggregates, the following rules were used:

- *Aggregate data for OIC and World is either totals or averages (simple or weighted).*
- *Generally, no aggregate values were calculated if missing data account for more than half of the number of OIC countries in a given year.*
- *Aggregates of ratios and indices were calculated using the simple arithmetic average (mean) technique in most cases.*

ERRATA

Although all content found in the Statistical Yearbook on OIC Member Countries 2018 was compiled with due care, errors cannot be entirely excluded. Therefore, please visit http://www.oicstatcom.org for list of errata, if any.
